# Oscilloscope Probes and Probe Accessories

# PROBE SELECTION

Teledyne LeCroy has a wide variety of world class probes and amplifiers to compliment its product line. From the ZS high impedance active probes to the WaveLink differential probing system which offers bandwidths up to 25 GHz, Teledyne LeCroy probes and probe accessories provide optimum mechanical connections for signal measurement.

Note: Some probes require purchase of the amplifier and platform/cable assembly separately – Reference detailed literature for more information.

# ACTIVE VOLTAGE PROBES

Engineers must commonly probe high-frequency signals with high signal fidelity. Typical passive probes with high input R and C provide good response at lower frequencies, but inappropriately load the circuit and distort signals at higher frequencies. Active voltage probes feature both high input R and low input C to reduce circuit loading across the entire probe/oscilloscope bandwidth. With low circuit loading and a form factor that allows probing in confined areas, the active voltage probe becomes the everyday probe for all different types of signals and connection points.

**ZS2500**  
**ZS4000**

The ZS Series probes are high impedance, low capacitance active probes that maintain high signal fidelity through 4 GHz. A small form factor and a wide variety of accessories ensures the ZS probe meets every difficult probing challenge.

Engineers must commonly probe high frequency signals with high signal fidelity. Typical passive probes with high input R and C provide good response at lower frequencies but inappropriately load the circuit and distort signals at higher frequencies. The ZS Series features both high input R (1 M $\Omega$ ) and low input C (0.6 pF and 0.9 pF) to reduce circuit loading across the entire probe/oscilloscope bandwidth. The ZS1000 is ideal for 200–600 MHz oscilloscopes. The ZS1500 is ideal for 1 GHz oscilloscopes, the ZS2500 is ideal for 2 GHz oscilloscopes, and the ZS4000 is ideal for 2.5 GHz and 4 GHz oscilloscopes.

**Teledyne LeCroy current probes do not require the breaking of a circuit or the insertion of a shunt to make accurate and reliable current measurements. Based on a combination of Hall effect and transformer technology, Teledyne LeCroy current probes are ideal for making accurate AC, DC, and impulse current measurements.**

## Wide Range of Applications

Teledyne LeCroy current probes are available in a variety of models for a wide range of applications. The full range of Teledyne LeCroy current probes includes models with bandwidths up to 100 MHz, peak currents up to 700 A and sensitivities to 1 mA/div. Teledyne LeCroy current probes are often used in applications such as the design and test of switching power supplies, motor drives, electric vehicles, and uninterruptible power supplies.

## High Sensitivity

The CP030A and CP031A provide a high sensitivity of 1 mA/div. This allows for more precise low current measurements on Teledyne LeCroy oscilloscopes. When used with HDO high definition oscilloscopes with HD4096 technology, users will obtain highly accurate, low current waveforms with unmatched 12-bit resolution for improved debug and analysis.

## Fully Integrated

All Teledyne LeCroy current probes are powered through the Teledyne LeCroy ProBus® connection and require no additional hardware. Along with providing power, the ProBus connection allows the current probe and oscilloscope to communicate, resulting in current waveforms automatically displayed on screen in Amps, and calculated power traces scaled correctly in Watts. This full integration also allows for Degauss and Autozero functions to be done directly from the oscilloscope's user interface.

## Deskew Calibration Source

The DCS015 deskew calibration source has both voltage and current time-aligned signals, which enables the precise deskew of voltage and current probes. Most voltage probes along with the CP030, CP030A, CP031, and CP031A are compatible with the DCS015.

## Features

- ProBus active probe interface with automatic scaling in A/div
- Autozero and degauss capabilities built into instrument's user interface
- Wide range of input currents and bandwidth capabilities

- **CP030**
  - 30 A<sub>rms</sub> continuous current
  - 50 A<sub>peak</sub> current
  - 50 MHz bandwidth

- **CP030A**
  - 30 A<sub>rms</sub> continuous current
  - 50 A<sub>peak</sub> current
  - 50 MHz bandwidth
  - 1 mA/div sensitivity

- **CP031**
  - 30 A<sub>rms</sub> continuous current
  - 50 A<sub>peak</sub> current
  - 100 MHz bandwidth

- **CP031A**
  - 30 A<sub>rms</sub> continuous current
  - 50 A<sub>peak</sub> current
  - 100 MHz bandwidth
  - 1 mA/div sensitivity

- **CP150**
  - 150 A<sub>rms</sub> continuous current
  - 500 A<sub>peak</sub> current
  - 10 MHz bandwidth

- **CP500**
  - 500 A<sub>rms</sub> continuous current
  - 700 A<sub>peak</sub> current
  - 2 MHz bandwidth

- **DCS015**
  - Precise des skew of voltage and current probes.
  - Compatible with the CP031, CP031A, CP030, and CP030A

\* Electrical Characteristics Guaranteed at 23 °C ±3 °C

† The CP031 and CP030 require the Teledyne LeCroy oscilloscope to be running firmware version 4.3.1.1 or greater. The CP031A and CP030A require firmware version 7.7.1.Xa or greater. The CP030A and CP031A are not compatible with the WaveSurfer 3000 series.

# DIFFERENTIAL PROBES

Differential active probes are like two probes in one. Instead of measuring a test point in relation to a ground point (like single-ended active probes), differential probes measure the difference in voltage of a test point in relation to another test point.

The ZD Series probes provide wide dynamic range, excellent noise and loading performance and an extensive set of probe tips, leads, and ground accessories to handle a wide range of probing scenarios. The low 1 pF capacitance means this probe is ideal for all frequencies. The ZD Series differential probes provide full system bandwidth for all Teledyne LeCroy Oscilloscopes 1.5 GHz and lower.

## Fully Integrated

With the ProBus interface, the ZD500, 1000, and 1500 become an integral part of the oscilloscope. All probe gain and offset controls are transparent to the user, making it easier to probe the circuit without concern for which gain setting to choose. When used with a Teledyne LeCroy digital oscilloscope, no external power supply is required.

## Wide Dynamic Range

The ZD500, 1000, 1500 probes provide transparent probe attenuation so signals are always optimized for the display. The differential range is 18 V<sub>p-p</sub> with a differential offset of ±8V and common mode range of ±10 V, making these probes versatile for every probing application.

## Wide Applications

The wide dynamic range of 16 V<sub>p-p</sub> and offset range of ±8V suit this probe to a wide range of applications and signal types. The ZD differential probes are ideally suited for Automotive, Serial Data, power, and general purpose use.

## AP033

High bandwidth, excellent common-mode rejection ratio (CMRR) and low noise make these active differential probes ideal for applications such as disk drive design and failure analysis, as well as wireless and data communication design.

## Ordering Information

### Product Description

500 MHz Differential Probe

### Product Code

AP033

# 4 GHz - 6 GHz DIFFERENTIAL PROBES

Teledyne LeCroy  
4 GHz - 6 GHz  
Differential Probe  
Model Numbers:

**D410-PS**  
**D420-PS**  
**D400A-AT**  
**D610-PS**  
**D620-PS**  
**D600A-AT**

WaveLink® probes provide industry leading technology for wideband signal connection to test instruments. The first differential probes to employ SiGe technology, they deliver full system bandwidth when used with oscilloscopes up to 6 GHz.

WaveLink probes:

- Maintain good loading characteristics across the frequency span
- Optimized for gain, noise and bandwidth for optimal performance
- Offer broad range of dynamic range and noise over gain settings by incorporating automatic probe attenuation changes

WaveLink is the first differential probe to use a unique calibration process to achieve superb waveform fidelity for routine voltage measurements. Calibration coefficients “fine tune” the frequency response of each WaveLink probe and are individually determined during factory calibration and programmed into the probe. The oscilloscopes read this data and use it to digitally compensate the entire system response for superior fidelity.

# 4 GHz - 6 GHz DIFFERENTIAL PROBES

|                                                                              | D610, D610-PS                                                                                                                                                                     | D620, D620-PS                                                                                                                                                                     | D410, D410-PS                                                                                                                                           | D420, D420-PS                                                                                                                                           | D600A-AT                                                                     | D400A-AT                                                                     |

# 8 GHz - 13 GHz DIFFERENTIAL PROBES

Teledyne LeCroy  
8 GHz - 13 GHz  
Differential Probe  
Model Numbers:

**D830-PS**

**D1030-PS**

**D1330-PS**

## General Purpose Probe with Range of Capabilities

Teledyne LeCroy's WaveLink 8-13 GHz Differential Probes are a medium bandwidth, general purpose probing solution with high input dynamic range and offset range capability. These probes support solder-in, positioner (browser), square pin and SMA/SMP cabled tip/lead connections. The range of capabilities is ideal for a variety of high speed DDR signals where high dynamic range and large offset requirements are common.

## Features and Benefits

- Choice of 8, 10, or 13 GHz bandwidth models
- 3.5 V<sub>pk-pk</sub> dynamic range
- ±4 V offset range
- Ideal for DDR3, DDR4, LPDDR3
- Deluxe soft carrying case
- Wide variety of tips and leads
  - Solder-In Lead
  - Positioner (Browser) Tip
  - SMA/SMP Lead
  - Square Pin Lead
- SMA/SMP lead set accessory does not require purchase of a different amplifier

## Product Description

### Complete Probe Systems

|                                                                                                                                                   |          |
|---------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| 8 GHz Complete Probe System with Dxx30-SI Solder-In Tip (Qty. 2), Dxx30-SP Square Pin (Qty. 1), and Dxx30-PT-KIT Positioner Tip Browser (Qty. 1)  | D830-PS  |
| 10 GHz Complete Probe System with Dxx30-SI Solder-In Tip (Qty. 2), Dxx30-SP Square Pin (Qty. 1), and Dxx30-PT-KIT Positioner Tip Browser (Qty. 1) | D1030-PS |
| 13 GHz Complete Probe System with Dxx30-SI Solder-In Tip (Qty. 2), Dxx30-SP Square Pin (Qty. 1), and Dxx30-PT-KIT Positioner Tip Browser (Qty. 1) | D1330-PS |

### Amplifier and Probe Tip Modules

|                                                                                                                                              |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-------|
| WaveLink D830 8 GHz/3.5V <sub>p-p</sub> Differential Probe Amplifier with Dxx30-SI Solder-In Tip (Qty. 2) and Dxx30-SP Square Pin (Qty. 1)   | D830  |
| WaveLink D1030 10 GHz/3.5V <sub>p-p</sub> Differential Probe Amplifier with Dxx30-SI Solder-In Tip (Qty. 2) and Dxx30-SP Square Pin (Qty. 1) | D1030 |
| WaveLink D1330 13 GHz/3.5V <sub>p-p</sub> Differential Probe Amplifier with Dxx30-SI Solder-In Tip (Qty. 2) and Dxx30-SP Square Pin (Qty. 1) | D1330 |

## Product Description

### Positioner Tip (Browser) Kits

|                                                                                                       |              |
|-------------------------------------------------------------------------------------------------------|--------------|
| WaveLink Dxx30-PT (up to 10 GHz rating) Adjustable Positioner Tip Kit. For use with Dxx30 amplifiers. | Dxx30-PT-KIT |
|-------------------------------------------------------------------------------------------------------|--------------|

### Probe Platform/Cable Assemblies and Adapters

|                                                                                                    |               |
|----------------------------------------------------------------------------------------------------|---------------|
| WaveLink ProLink Platform/Cable Assembly Kit with complete soft carrying case for all probe items. | WL-PLINK-CASE |
|----------------------------------------------------------------------------------------------------|---------------|

### SMA/SMP Lead Set

|                                                                                    |                     |
|------------------------------------------------------------------------------------|---------------------|
| Lead set consisting of WaveLink Dxx30-SMA-SMP-LEADS for use with Dxx30 amplifiers. | Dxx30-SMA-SMP-LEADS |
|------------------------------------------------------------------------------------|---------------------|

### Accessories

|                                           |          |
|-------------------------------------------|----------|
| Cascade Microtech EZ-Probe Positioner     | EZ PROBE |
| Probe Deskew and Calibration Test Fixture | TF-DSQ   |

### Calibration Options

|                                                 |              |
|-------------------------------------------------|--------------|
| NIST Calibration for D830. Includes test data.  | D830-CCNIST  |
| NIST Calibration for D1030. Includes test data. | D1030-CCNIST |
| NIST Calibration for D1330. Includes test data. | D1330-CCNIST |

# 13 GHz - 25 GHz DIFFERENTIAL PROBES

Teledyne LeCroy  
13 GHz - 25 GHz  
Differential Probe  
Model Numbers:

**D1305-A-PS**

**D1605-A-PS**

**D2005-A-PS**

**D2505-A-PS**

## Ultra-wideband Architecture for Superior Signal Fidelity

Teledyne LeCroy's WaveLink® high bandwidth differential probes utilize advanced differential traveling wave (distributed) amplifier architecture to achieve superior high frequency true analog broadband performance. Traveling wave (distributed) amplifiers are commonly used in ultra high frequency broadband amplifiers. This multi-stage amplifier architecture maximizes gain per stage and minimizes probe attenuation, which provides very low probe noise and fast rise times.

## Features & Benefits

- Up to 25 GHz bandwidth (probe + oscilloscope)
- System rise time as fast as 13 ps (20–80%)
- 25 GHz Solder-in solution
- 22 GHz ultra-compact browser tip
- Superior probe impedance minimizes AC loading on device under test (DUT)
- Carbon-composite browser tips optimize signal fidelity and minimize loading
- Probe noise as low as 14 nV/√Hz (1.6 mV<sub>rms</sub>)
- Low probe attenuation
- Large operating voltage range
  - ±4 V common mode range
  - ±2.5 V offset range
  - 2.0 V<sub>pk-pk</sub> dynamic range
- Long length Solder-In tip with field replaceable resistors

| NIST Calibration for D1605. Includes Test Data | D1605-A-CCNIST |
| NIST Calibration for D2005. Includes Test Data | D2005-A-CCNIST |
| NIST Calibration for D2505. Includes Test Data | D2505-A-CCNIST |

### Replacement Parts

|                                                                                                     |                    |
|-----------------------------------------------------------------------------------------------------|--------------------|
| Replacement Dxx05-SI 13–25 GHz Solder-In Lead with Qty. 5 Spare Resistors                           | Dxx05-SI           |
| Replacement SI Resistor Kit for Dxx05-SI Solder-In Tip                                              | Dxx05-SI-RESISTORS |
| Replacement Dxx05-PT Positioner Tip                                                                 | Dxx05-PT           |
| Qty. 4 Replacement Carbon Composite Pogo-pin Tips                                                   | Dxx05-PT-TIPS      |
| Replacement Probe Tip Holder Kit                                                                    | PK600ST-3          |
| Replacement Platform/Cable Assembly Mounting Kit                                                    | PK600ST-4          |
| Qty. 1 Package of Black Adhesive Pads (10/pkg.) and Qty. 1 Package of White Adhesive Pads (10/pkg.) | Dxx05-PT-TAPE      |
| Qty. 1 Package of Adhesive Probe Connection Guides (200 individual guides/package)                  | Dxx05-PT-GUIDES    |

# HIGH VOLTAGE DIFFERENTIAL PROBES

**Differential active probes are like two probes in one. Instead of measuring a test point in relation to a ground point (like single-ended active probes), differential probes measure the difference in voltage of a test point in relation to another test point.**

Teledyne LeCroy  
High Voltage  
Differential Probe  
Model Numbers:

**HVD3102**

**HVD3106**

**HVD3106-6M**

# HIGH VOLTAGE DIFFERENTIAL PROBES

Teledyne LeCroy  
High Voltage  
Differential Probe  
Model Numbers:

**HVD3102**

**HVD3106**

**HVD3106-6M**

The HVD3000 high voltage differential probes provide high CMRR over a broad frequency range to simplify the measurement challenges found in noisy, high common-mode power electronics environments. The probe's design is easy-to-use and enables safe, precise high voltage floating measurements.

## Features

- Differential voltage measurement capability up to 1000 Vrms
- Exceptional common-mode rejection ratio (CMRR) across a broad frequency range
- Wide differential voltage range of 1500 Vp-p, 2000 Vp-p before saturation for capture of short duration overshoots
- High offset capability at both high and low attenuation
- 1% DC and low frequency gain accuracy
- ProBus active probe interface with automatic scaling
- Auto-zero capabilities

# HIGH VOLTAGE DIFFERENTIAL PROBES

## Specifications

|                                                      | HVD3102                                                                                                                                                                                                                                                                             | HVD3106                                                   | HVD3106-6M                                                |

# HIGH VOLTAGE DIFFERENTIAL PROBES

Teledyne LeCroy  
High Voltage  
Differential Probes  
Model Numbers:

AP031  
ADP300  
ADP305

The AP031 is a low cost, battery operated active differential probe intended for measuring higher voltages. The differential techniques employed permit measurements to be taken at two points in a circuit without reference to the ground, allowing the oscilloscope to be safely grounded without the use of opto-isolators or isolating transformers.

### Features

- Safe floating measurements
- 15 MHz bandwidth
- 700 V maximum input voltage
- Works with any 1 MΩ input oscilloscope

### AP031 Specifications

|                         |                                  |
|-------------------------|----------------------------------|
| Attenuation             | ÷10 / ÷100                       |
| Bandwidth               | 15 MHz                           |
| Input R                 | 4 MΩ                             |
| Differential Mode Range | ±70 V / ±700 V DC + Peak AC      |
| Common Mode Range       | ±700 V DC + Peak AC              |
| CMRR                    | 86 dB @ 50 Hz<br>56 dB @ 200 kHz |

Power Requirements: four AA batteries

# HIGH VOLTAGE DIFFERENTIAL PROBES

ADP30X high-voltage active probes are safe, easy-to-use, and ideally suited for measuring power electronics. The ADP300 is designed for troubleshooting low-frequency power devices and other circuits where the reference potential is elevated from the ground or the location of the ground is unknown. The ADP305 is designed for measuring the high-speed floating voltages found in today's power electronics.

## Features

- 20 MHz and 100 MHz bandwidth
- 1,000 V<sub>rms</sub> common mode voltage
- 1,400 V<sub>peak</sub> differential voltage
- EN 61010 CAT III
- 80 dB CMRR at 50/60 Hz
- ProBus system
- Full remote control

\*Requires AP-1M for oscilloscopes with 50 Ω only inputs

# DIFFERENTIAL AMPLIFIERS

Differential amplifiers are intended to act as signal conditioning preamplifiers for oscilloscopes and network and spectrum analyzers, providing differential measurement capability to instruments having only a single-ended input. The “-PR2” version of each amplifier is a dual channel unit. The DXC series differential input cables are matched to the characteristics of the amplifier.

## DA1855A

The DA1855A is a stand-alone, high-performance 100 MHz differential amplifier. It is intended to act as a signal conditioning preamplifier for oscilloscopes, digitizers and spectrum analyzers, providing differential measurement capability to instruments having only a single-ended input. When used with a DA1855A, oscilloscopes can obtain Common Mode Rejection Ratio (CMRR) and overdrive recovery performance levels previously unobtainable.

Amplifier gain can be set to 1 or 10. A built-in input attenuator can be separately set to attenuate signals by a factor of 10, providing gains of 10, 1, or 0.1 and common mode dynamic range of  $\pm 15.5 \text{ V} (\div 1)$  or  $\pm 155 \text{ V} (\div 10)$ . Optional probes increase the maximum input signal and common mode ranges

in proportion to their attenuation ratio but do not exceed their maximum input voltage rating. Effective gain of the DA1855A, including probe attenuation, amplifier gain and attenuator settings, is automatically displayed.

The DA1855A features a built-in Precision Voltage Generator (PVG) that can be set to any voltage between  $\pm 15.5 \text{ V}$  ( $\pm 10 \text{ V}$  in Differential Offset) with up to  $100 \mu\text{V}$  resolution. The PVG's output can be selected as an input to the inverting (-) input of the amplifier for operation as a differential comparator, or applied internally as a true differential offset voltage independent of oscilloscope offset. The differential amplifier is also available in a 2 channel model. In addition, a rackmount is available for each model for easy installation with other instruments.

## DXC100A

÷100 or ÷10 Selectable, 250 MHz Passive Differential Probe Pair

- DC to 100 MHz Bandwidth with DA1855A  
DC to 10 MHz Bandwidth with DA1822
- Max Input Voltage 500 V
- Selectable 10 or 100 Attenuation Factor
- 1.2 m Cable Length

## DXC200

÷1, 50 MHz, Passive Differential Probe Pair

- DC to 50 MHz with DA1855A  
DC to 10 MHz with DA1822A
- Max Input Voltage 500 V (Limited to Amplifier Max Input Voltage)
- x1 Differential Probe Pair
- 0.7 m Cable Length

## DXC5100

÷100, 2.5KV Passive High Voltage Probe Pair. Requires DA101 for full performance

## DA101

÷10, 1M $\Omega$  Passive Attenuator for DXC series probes

# HIGH VOLTAGE PROBES

High voltage probes are suitable for a wide range of applications where high-voltage measurements must be made safely and accurately. There are several fixed attenuation probes covering a range from 1 kV to 6 kV and varying transient overvoltage ratings. All of these high voltage probes feature a spring loaded probe tip and a variety of standard accessories to make probing high voltages safe and easy. Additionally, all of the high voltage probe have a probe sense pin to automatically configure the oscilloscope for use with the probe.

Teledyne LeCroy  
High Voltage Probe  
Model Number:  
**HVP120**

The HVP120 is a high voltage passive probe designed for probing up to 1,000 Vrms and capable of handling up to 6,000 V peak transients. Its fast rise time and excellent frequency response make it suitable for a wide variety of high voltage measurement applications. The HVP120 features a spring loaded probe tip and a variety of standard accessories to make probing high voltages safe and easy.

**Features**

- 400 MHz probe bandwidth
- 900 ps rise time
- 1000 Vrms maximum input
- Up to 6 kV transient overvoltage

## Replacement Accessories

One of each of the following accessories are included with the HVP120. Replacement quantities are listed below.

|                                                            |             |
|------------------------------------------------------------|-------------|
| Coding Rings (set) 4 Colors (Qty 3 also included standard) | PK1-5MM-106 |
| Ground Lead 22 cm to 4 mm Banana plug (Qty 1)              | PK1-5MM-122 |
| Solid Tip 0.8 mm (Qty 5)                                   | PK1-5MM-125 |
| Spring Tip 0.8 mm (Qty 5)                                  | PK1-5MM-126 |
| BNC Adapter 5.0-L (Qty 1)                                  | PK1-5MM-127 |
| Insulating Cap 5.0-L (Qty 1)                               | PK1-5MM-128 |
| Protection Cap 5.0-L (Qty 1)                               | PK1-5MM-129 |
| Sprung Hook 5.0-L (Qty 1)                                  | PK1-5MM-130 |
| Adjustment Tool T (Qty 1)                                  | PK1-5MM-131 |
| Flexible Adapter 5.0-L (Qty 1)                             | PK1-5MM-132 |
| Safety Alligator Clip red (Qty 1)                          | PK1-5MM-133 |
| Ground Lead 22 cm (Qty 1)                                  | PK1-5MM-134 |

# HIGH VOLTAGE PROBES

Teledyne LeCroy  
High Voltage Probe  
Model Numbers:

PPE1.2KV  
PPE2KV  
PPE4KV  
PPE5KV  
PPE6KV

The PPE series includes four fixed-attenuation probes covering a range from 2 kV to 6 kV, and one switchable probe providing  $\div 10/\div 100$  attenuation for voltage inputs up to 1.2 kV. All fixed-attenuation, standard probes automatically rescale compatible Teledyne LeCroy oscilloscopes for the appropriate attenuation of the probe.

### Features

- Safe, accurate high-voltage measurement
- 1.2 kV to 6 kV

 \* Probe Kit: Trimming tool, ground lead, rigid tip, IC insulator, BNC adapter, tip insulator, sprung hook, red crocodile clip.  
 4 mm safety ground lead, and green/yellow crocodile clip.

# OPTICAL PROBES

Teledyne LeCroy's wide-band multi-mode optical-to-electrical converters are designed for measuring optical communications signals. Their broad wavelength range and multi-mode input optics make these devices ideal for applications including Ethernet, Fibre Channel, and ITU telecom standards. Available to support optical data rates up to 11.3 Gb/s with reference receivers, or slightly higher without reference receivers.

These wide-band multi-mode optical-to-electrical converters are designed for measuring optical communications signals. They connect to Teledyne LeCroy real-time oscilloscopes and provide capability for physical layer signal assessment using a variety of oscilloscope tools, such as SDAIII-CompleteLinQ Serial Data Eye, Jitter, Noise and Crosstalk Analysis, mask testing, serial triggering and decoding, and other compliance and debug tools. Maximum data rate test capability is >11.317 Gb/s with reference receiver, or 12.5 Gb/s without.

## OE695G

Teledyne LeCroy's OE695G wide-band optical-to-electrical converter is ideal for measuring optical datacom and telecom signals with data rates from 622 Mb/s to 12.5+ Gb/s. Connection to a real-time Teledyne LeCroy oscilloscope is through the 2.92mm interface, with a provided adapter to connect to ProLink interfaces.

## Features

- Compatible with Teledyne LeCroy WavePro 7 Zi/Zi-A, WaveMaster 8 Zi/Zi-A, LabMaster 9 Zi-A, and LabMaster 10 Zi oscilloscopes
- Frequency range DC to 9.5 GHz (electrical, -3 dB)
- Reference receiver support from 8GFC to 10GFC FEC, or Custom (<12.5Gb/s)
- Full bandwidth mode (no reference receiver applied)
- 62.5/125  $\mu$ m multi-mode or single-mode fiber input
- +7 dBm (5 mW) max peak optical power
- Low noise (as low as 25 pW/ $\sqrt{\text{Hz}}$ )
- Ideal for Eye Mask, Extinction Ratio, and Optical Modulation Amplitude (OMA) testing

## Specifications

**OE425/OE455/OE525/OE555**

The O/E converters contain calibration data that can be used to create optical reference receivers for SONET/SDH (up to OC48/STM16), Fibre Channel, Gigabit Ethernet, and other optical standards. This feature is available when the O/E is used on a supported oscilloscope. The universal reference receiver supports any data rate up to 3 GHz and remains calibrated on any channel of the oscilloscope.

**Features**

- Frequency range to 5 GHz (6 GHz optical)
- 62.5  $\mu\text{m}$  or narrower multi-mode or single-mode fiber input
- Broad wavelength range:
  - 500–870 nm (OE425, OE525)
  - 950–1630 nm (OE455, OE555)
- High responsivity
- Low noise
- Included Accessories:
  - Multi-mode optical fiber jumper FC-FC
  - FC to ST adapter
  - FC to SC adapter

# PASSIVE PROBES

Passive probes are the standard probe provided with most oscilloscopes. Typical passive probes provide a  $\div 10$  attenuation and feature a high input resistance of 10 M $\Omega$ . This high input resistance means that passive probes are the ideal tool for low frequency signals since circuit loading at these frequencies is minimized. Passive probes are designed to handle voltages of at least 400 V, some as high as 600 V. Teledyne LeCroy passive probes feature an attenuation sense pin which tells the oscilloscope to scale the waveforms automatically requiring no user input.

Each passive probe is recommended for a certain oscilloscope, using the right passive probe with the right oscilloscope means that the probe can be properly compensated across the entire bandwidth. Using probes with a different oscilloscope will only let you compensate for low frequencies.

## Features

- Bandwidth from 200 MHz to 500 MHz
- Probe encoding ring for automatic scale factor readout on Teledyne LeCroy oscilloscopes

# TRANSMISSION LINE PROBES

Teledyne LeCroy  
Transmission Line Probe  
Model Number:  
PP066

Transmission line probes are a special type of passive probe designed for use at very high frequencies. They replace the high impedance probe cable found in a traditional passive probe with a precision transmission line, with a characteristic impedance that matches the oscilloscope input ( $50\ \Omega$ ). This greatly reduces the input capacitance to a fraction of a picofarad, minimizing the loading of high frequency signals. A matching network at the tip increases the DC input resistance. While they have lower DC input resistance than a traditional passive probe (usually  $500\ \Omega$  to  $5\ \text{k}\Omega$ ), the input impedance of these probes remains nearly constant over their entire frequency range. A traditional  $\div 10$  passive probe will have a  $10\ \text{M}\Omega$  input impedance at DC, however this impedance drops rapidly with frequency, passing below the input impedance of a transmission line probe at less than 100 MHz.

In some applications, transmission line probes offer advantages over active probes. In addition to being less expensive, their passive design is more robust to over voltage and ESD exposure. They are useful in applications producing fast rising, narrow pulses with amplitudes which exceed the dynamic range of active probes. They also tend to have less parasitic effects on frequency response.

## PP066

The PP066 is a high-bandwidth passive probe designed for use with the WaveMaster and other high-bandwidth oscilloscopes with 50  $\Omega$  input termination. This very low capacitance probe provides an excellent solution for higher frequency applications, especially the probing of transmission lines with 20–100  $\Omega$  impedance. The PP066 accommodates a wide range of applications, including probing of analog and digital ICs commonly found in computer, communications, data storage, and other high-speed designs.

### Features:

- Interchangeable attenuator tips
- Signal integrity at high bandwidth
- Standard SMA cable connection
- Ultra low capacitance

| Input Capacitance | < 0.20 pF                                                                   |
| Input Resistance  | 500 $\Omega$ ( $\div 10$ cartridge)<br>1000 $\Omega$ ( $\div 20$ cartridge) |
| Maximum Voltage   | 15 V rms                                                                    |
| Cable Length      | 1 m                                                                         |

## Ordering Information

### Product Description

7.5 GHz Low Capacitance Passive Probe  
( $\div 10$ , 1 k $\Omega$ ;  $\div 20$ , 500  $\Omega$ )

### Product Code

PP066

### Included with PP0066

PACC-AD001, SMA to BNC Adapter
