

STG4159

Low voltage 0.3Ω max single SPDT switch with break-before-make feature and 10kV contact ESD protection

Features

- Wide operating voltage range: V_{CC} (OPR) = 1.65V to 4.8V
- Low power dissipation: $I_{CC} = 0.2\mu A \text{ (max.)}$ at $T_A = 85^{\circ}C$
- Low "ON" resistance V_{IN} = 0V:
 - R_{ON} = 0.40 Ω (max. T_A = 25 $^{\circ}$ C) at V_{CC} = 2.25V
 - R_{ON} = 0.35 Ω (max. T_A = 25 $^{\circ}$ C) at V_{CC} = 3.0V
 - R_{ON} = 0.30 Ω (max. T_A = 25 $^{\circ}$ C) at V_{CC} = 4.3V
- Separate supply voltage for switch and control pin
- Latch-up performance exceeds 100mA per JESD 78, Class II
- ESD performance tested on common channel (D pin)
 - 10kV IEC-61000-4-2 ESD, contact discharge
 - 15kV IEC-61000-4-2 ESD, air discharge
- ESD performance test on all other pins
 - 10kV IEC-61000-4-2 ESD, contact discharge
 - 500V machine model (JF3D22 A115-A)
- 1500V chargca-ป∈vice model (JESD22 C10 .)

Description

The STG4159 is a high-speed CMOS low voltage single analog SPDT. Single Pole Dual Throw) switch or 2:1 m. Raplexer/demultiplexer switch fabricated in sincon gate C^2 MOS technology. It is designed to operate from 1.65V to 4.58V, making this device ideal for portable applications. It offers tow ON-resistance (0.45 Ω) at V_{CC} = 4.3V. The SEL inputs are provided to control the switches.

The switch S1 is ON (connected to common Port D) when the SEL input is held high and OFF (high impedance state exists between the two ports) when SEL is held low; the switch S2 is ON (it is connected to common Port D) when the SEL input is held low and OFF (high impedance state exist between the two ports) when SEL is held high.

Additional key features are fast switching speed, break-before-make delay time and ultra low power consumption. All inputs and outputs are equipped with protection circuits against static discharge, giving them ESD immunity and transient excess voltage.

STG4159 Maximum rating

2 Maximum rating

Stressing the device above the rating listed in the "Absolute maximum ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

5 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
