

75 Watt QH Single Series DC/DC Converters

Description

The 75 Watt single QH series of DC/DC Converters provide precisely regulated dc outputs. All outputs are fully isolated from the inputs, allowing the output to be used with positive or negative polarity and various grounding options. The QH Series meets the most rigorous requirements in an industry standard case size for industrial process control and telecom applications.

Standard features include remote sensing, output trim, and remote on/off. Threaded-through holes are provided to allow easy mounting or add a heat sink for extended temperature use.

Features

- Small size 1.45"x2.28"x0.52", industry standard 1/4 brick
- Excellent thermal performance with metal baseplate
- High Efficiency
- Fast over voltage protection
- Pulse-by-pulse current limiting, dead short current limiting
- Over-temperature protection
- Auto-softstart
- Very Low noise
- Low profile magnetics run cooler
- Constant frequency for normal operation
- 2:1 input voltage range
- Remote Sense with excellent regulation
- Remote ON/OFF
- Super energy saving, 6 mA input idle current
- Output trim with very low temperature coefficient
- Water Washable, wide humidity applications
- Good shock and vibration damping
- Low cost
- 5 Year Warranty

Selection Chart

Model	Input Range VDC		I in ADC @ nom	V out VDC	I out ADC
	Min	Max	Typ		
24S3.20QH	18	36	3.35	3.3	20
24S5.15QH	18	36	3.72	5	15
24S12.6QH	18	36	3.63	12	6.25
24S15.5QH	18	36	3.59	15	5
24S24.3QH	18	36	3.59	24	3.13
48S3.20QH	36	75	1.67	3.3	20
48S5.15QH	36	75	1.86	5	15
48S12.6QH	36	75	1.81	12	6.25
48S15.5QH	36	75	1.79	15	5
48S24.3QH	36	75	1.79	24	3.13

Default ON/OFF logic is positive.
Add -N to the model number to order negative ON/OFF logic.

75 Watt QH Single Series DC/DC Converters

Unless otherwise stated, these specifications apply for ambient temperature $T_A=23 \pm 2^\circ\text{C}$, nominal input voltage, and rated full load. (1)

Input Parameters

NOTES:

- Refer to the CALEX Application Notes for the definition of terms, measurement circuits, and other information.
- Refer to the CALEX Application Notes for information on fusing. For inrush current, refer to the specifications above.
- Place a 33 μF capacitor between the two "Input" pins. Then place a current sensor in series with a 12 μH inductor between the capacitor and the source. The reflected ripple current is measured over 5 Hz to 20 MHz bandwidth (current sensor is located between the converter input pins and the 12 μH inductor).
- Optimum performance is obtained when this power supply is operated within the minimum to maximum load specifications. No damage to module will occur when the output is operated at less than minimum load, but the output voltage may contain a low frequency component that may exceed output noise specifications.
At no load the converter output voltage will fall out of regulation, typically rising to the OVP limit. A load current of between 0.5% to 1% of maximum rated load will usually suffice to bring the output voltage within regulation.
- Load regulation is defined as the output voltage change when changing load current from maximum to minimum. The voltage is measured at the output pin.
- Load Transient Recovery Time is defined as the time for the output to settle from a 50 to 75% or 25% step load change to a 1% error band of output voltage (rise time of step = 2 μSec).
- Load Transient Overshoot is defined as the peak overshoot during a transient as defined in the Note 6 above.
- Noise is measured per the CALEX Application Notes. Output noise is measured with a 10 μF tantalum capacitor in parallel with a 0.1 μF ceramic capacitor connected across the output to CMN. Measurement bandwidth is 0-20 MHz.
- When an external On/Off switch is used, such as open collector switch, logic high requires the switch to be high-impedance. Switch leakage currents greater than 20 μA may be sufficient to trigger the On/Off to the logic-low state.
- Most switches would be suitable for logic On/Off control, in case there is a problem, you can make following estimation and then leave some margin.
When open collector is used for logic high, "Open Circuit Voltage at On/Off Pin", "Output Resistance" and "External Leakage Current Allowed for Logic High" are used to estimate the high impedance requirement of open collector.
When switch is used for logic low, "Open Circuit Voltage at On/Off Pin", "Output Resistance" and "LOW Logic Level" are used to estimate the low impedance requirement of switch.
- Thermal impedance is tested with the converter mounted vertically and facing another printed circuit board 1/2 inch away. If converter is mounted horizontally with no obstructions, thermal impedance is approximately 10 $^\circ\text{C/W}$.
If heat sink is needed, apply a very thin layer of thermally conductive grease on the metal base of converter, then properly tighten the screws.
- Water Washability - Calex DC/DC converters are designed to withstand most solder/wash processes. Careful attention should be used when assessing the applicability in your specific manufacturing process. Converters are not hermetically sealed.
- Torque fasteners into threaded mounting inserts at 12 in. oz. or less. Greater torque may result in damage to unit and void the warranty.

75 Watt QH Single Series DC/DC Converters

General Specifications			
All Models			Units
Remote ON/OFF Function			
HIGH Logic Level or Leave ON/OFF Pin Open	MIN	3.0	VDC
External Leakage Current Allowed for Logic High (9)	MAX	20	μA
Input Diode Protection Voltage	MAX	50	VDC
LOW Logic Level or Tie ON/OFF Pin to -Input	MAX	1.0	VDC
Sinking Current for Logic Low	MAX	1	mA
Open Circuit Voltage at Primary ON/OFF Pin (10)			
Positive Logic	TYP	5.6	VDC
Negative Logic	TYP	1.5	VDC
Idle Current (Module is OFF)	TYP	6	mADC
Turn-on Time to 1% error	TYP	8	mSec
Positive Logic Option	HIGH - Module ON LOW - Module OFF		
Negative Logic Option	HIGH - Module OFF LOW - Module ON		
Output Voltage Trim			
Trim Range	MIN MAX	±10	% of Vout
Input Resistance	TYP	10	k Ohm
Open Circuit Voltage	TYP	2.5	V
Output Voltage Remote Sensing			
Maximum Voltage Drops on Lead	MAX	0.5	VDC
Line Regulation under remote sensing	TYP MAX	0.02 0.1	%
Load Regulation under remote sensing	TYP MAX	0.05 0.2	%
Sense and Trim Limit			
Maximum Output Voltage	MAX	110	% of Vout
Isolation			
Input to Output Isolation* 10μA Leakage Vnom = 24 V models Vnom = 48 V models	MAX MAX	700 1544	VDC VDC
Environmental			
Calculated MTBF, Bellcore Method 1, Case 1		>1,000,000	Hr
Baseplate Operating Temperature Range	MIN MAX	-40 100	°C
Storage Temperature	MIN MAX	-40 120	°C
Thermal Impedance (11)	TYP	9	°C/W
Thermal Shutdown Baseplate Temperature (Auto Restart)	MIN TYP	100 110	°C
