313 & 314 safety relief valve

series 313

series 314

Application

The Altecnic series 313 and 314 safety relief valves with pressure gauge are used in domestic hot water systems to protect the hot water cylinder and in heating systems to protect boiler and other components.

The valve is selected for the required set pressure. As the pressure rises, when the discharge pressure is reached the valve opens and discharges to atmosphere, preventing the pressure within the system reaching levels which would be dangerous for the boiler, hot water storage cylinder and any personnel in the adjacent vicinity.

Construction Details

Component	Material	Grade
Body	Brass	BS EN 12165 CW617N
Cover	Brass	BS EN 12165 CW617N
Stem	Brass	BS EN 12164 CW614N
Diaphragm	EPDM	
Spring	Stainless steel	
Control Knob	ABS Polymer

CE Mark

Series 313 & 314 safety relief valves meet the requirements of the European Directive 97/23/CE for pressurised equipment often referred to PED.

They are therefore classified in Category IV and granted the CE Mark.
