ESTABLISHED RELIABILITY TO-5 RELAYS SPDT

SERIES 411

SERIES DESIGNATION	RELAY TYPE
411	SPDT basic relay
411D	SPDT relay with internal diode for coil suppression
411DD	SPDT relay with internal diodes for coil transient suppression and polarity reversal protection
411T	SPDT relay with internal transistor driver and coil transient suppression diode

INTERNAL CONSTRUCTION

DESCRIPTION

The TO-5 relay, originally conceived and developed by Teledyne, has become one of the industry standards for low-level switching from dry circuit to 1 ampere. Designed specifically for high-density PC board mounting, its small size and low coil power dissipation make the 411 relay one of the most versatile ultraminiature relays available.

The following unique construction features and manufacturing techniques provide excellent resistance to environmental extremes and overall high reliability.

- All welded construction.
- Unique uni-frame design, providing high magnetic efficiency and mechanical rigidity.
- High force/mass ratios for resistance to shock and vibration.
- Advanced cleaning techniques provide maximum assurance of internal cleanliness.
- Precious metal alloy contact material with gold plating assures excellent high current and dry circuit switching capabilities.

The Series 411D and 411DD relays have internal discrete silicon diodes for coil suppression and polarity reversal protection. The hybrid 411T relay features an internal silicon suppression diode and transistor driver. This hybrid package reduces required PC board floor space by reducing the number of external components needed to drive the relay.

By virtue of its inherently low intercontact capacitance and contact circuit losses, the 411 relay has proven to be an excellent ultraminiature RF switch for frequency ranges well into the UHF spectrum. A typical RF application for the TO-5 relay is in handheld radio transceivers, wherein the combined features of good RF performance, small size, low coil power dissipation and high reliability make it a preferred method of T-R switching (see Figure 1).

ENVIRONMENTAL AND PHYSICAL SPECIFICATIONS

Temperature (Ambient)	-65°C to +125°C
Vibration (General Note 1)	30 g's to 3000 Hz
Shock (General Note 1)	75 g's, 6 msec, half-sine
Acceleration	50 g's
Enclosure	Hermetically sealed
Weight	0.089 oz. (2.52g) max.

GENERAL NOTES

- Relay contacts will exhibit no chatter in excess of 10 μ sec or transfer in excess of 1 μ sec.
- "Typical" characteristics are based on available data and are best estimates. No on-going verification tests are performed.
- Unless otherwise specified, parameters are initial values.
- For reference only. Coil resistance not directly measurable at relay terminals due to internal series semiconductor, 411DD and 411T only.
- Unless otherwise specified, relays will be supplied with either gold-plated or solder-coated leads.
- The slash and characters appearing after the slash are not marked on the relay.
- Limit Base Emitter current to 15 mA.
- Applicable to all coil voltages. See Base current to turn on.
- Screened HI-REL versions available. Contact factory.
