

Radio Coverage Test Set EPM 200

EPM 200 is a complete test set supporting electrical installers during the planning and installation phase.

It allows to verify whether the installation of EnOcean transmitters and receivers is possible at the positions planned. The set contains an easyfit PTM250 light switch, the field intensity meter EPM 100 with battery and a user's guide.

Application Examples

2 installers:

Person 1 operates an EnOcean switch. Person 2 monitors the received field strength at the desired mounting position using EPM 100.

1 installer (EPM signal memory function):

The EPM 100 is placed at the desired mounting position for the receiver. The EnOcean switch is also placed at the desired position. After pressing the button the installer can go back to the EPM 100 and see whether the radio signal was sufficient (green LEDs) or not received at all (red LED).
