

MOON-Link Couplers

Transparent Duct Couplings

- Allows visual inspection of duct through the coupler
- Water-tight and air-tight
- Simple installation
- Light-weight and low cost
- Provides excellent mechanical hold

Especially designed for coupling HDPE to PVC conduit, or even IPS steel, the MOON-Link coupling is easy to install, contains no metallic parts, and is completely water-tight. The coupling provides a strong mechanical connection for a wide variety of conduit types.

MOON-Link duct couplings are constructed of a polyurethane elastomeric gasket within a durable, transparent outer shell. They are designed for coupling all types of conduit. The component parts are see-through, so the installer can verify that the conduit ends are fully seated within each half of the coupling.

Part No.	Description	Size	Duct OD
