Type FG2P

**FRACTIONAL HORSEPOWER MANUAL STARTERS
WITH MELTING ALLOY TYPE THERMAL OVERLOAD RELAY**

Application Data

Type F fractional horsepower starters provide overload protection as well as manual “On-Off” control for small motors in a variety of industrial and commercial installations. Typical applications include fans, conveyors, pumps, and small machine tools.

They are available in one or two pole versions. Both one-pole and two-pole versions are suitable for use with AC single phase motors rated up to 1 horsepower. Two-pole starters may also be used with DC motors rated up to 0.75 horsepower.

Voltage Rating 277 VAC maximum (1 or 2 pole)
230 VDC maximum (2 pole only)

Horsepower Ratings

Volts	Maximum Horsepower		
	AC Single Phase		DC
	1 Pole	2 Pole	2 Pole Only
115 to 230	1	1	$\frac{3}{4}$
277	1	1	—

Continuous Current Rating 16 A

Enclosures

NEMA Type 1 surface mounting enclosures are sheet steel with a thermoplastic wrap-around cover for convenience in wiring. The NEMA Type 1 enclosure is also available in an oversized version that allows more space for wiring. A zinc alloy die casting is used for NEMA Type 4 enclosures, and a cast aluminum enclosure is offered for NEMA Type 3R, 7 & 9 applications.

Pilot Light

Red or green neon pilot light units are available factory installed in NEMA Type 1 surface and flush mounting and NEMA Type 4 enclosures. They are also available as a field modification kit for NEMA Type 1 enclosures and gray flush plates.

Use order number as is for red pilot light; add a G to the number for a green pilot light.

Handle Guard/Lock-Off

An optional handle guard on NEMA Type 1 enclosed starters prevents accidental operation of the toggle operator and allows the toggle operator to be padlocked in either the On or Off position.

The handle guard can be factory installed on NEMA Type 1 enclosed starters. It is also available in kit form for field installation on NEMA Type 1 surface and flush mounting enclosures. Standard NEMA Type 4 and NEMA Type 3R, 7 & 9 enclosures include provision for locking in the Off position.

Terminals

Binder head screw type terminals are suitable for #10 or smaller copper wire, and are accessible from the front. All terminals are clearly marked.

Mounting

Open types without a pilot light fit standard single gang switch boxes, and can be used with any cover plate having a standard toggle cutout. Single-unit flush mounting types, including those with pilot light, are suitable for wall mounting in a standard switch box or for machine cavity mounting without a box.

Operator

Available with toggle handle or with removable key type operator to discourage unauthorized operation.

Thermal Units

Starters will not operate without properly installed thermal units. Install thermal units so that the markings face the front of the starter.

Type FO2

Manual Starters and Switches
Class 2510, 2512 Type F

Emergency Off Actuator

A toggle operator extender is available for NEMA Type 1 surface-mounted units. The extender has a red vinyl button that provides a fast and easy method for locating and switching the device's toggle operator into the Off position. The Emergency Off Actuator is available in kit form only for field installation.

Two Speed Starters (Class 2512)

Type F two-speed manual starters are designed for the control of small single-phase AC motors that have separate windings for high and low speed operation. Two toggle-operated starters are used, with overload protection included for each motor winding. Surface mounting devices, and those with a gray flush plate, utilize a mechanical interlock which allows direct control of the motor by means of the toggle operators.

Manual Starters and Switches

Class 2510, 2511, 2512 Type K

Type KG1A

MANUAL SWITCHES – TYPE K

REVERSING, NON-REVERSING, TWO SPEED

Application Data

Type K motor starting switches provide manual “on-off” control of single- or three-phase AC motors, where overload protection is not required or is provided separately. These devices are suitable for use with three-phase AC motors rated up to 20 horsepower. Compact construction and a 600 volt rating make these switches suitable for a wide range of industrial and commercial uses. Typical applications include small machine tools, pumps, fans, conveyors, and many other types of electrical machinery. They may also be used on non-motor loads such as resistance heaters.

Voltage Rating 600 VAC maximum
230 VDC maximum

Continuous Current Rating 30 A at 600 VAC maximum

Horsepower Ratings

Class 2510	No. of Poles	Motor Type	Maximum Horsepower				DC Rating

	3	3-Phase Constant Horsepower	2	7-1/2	10	10	1	2	1-1/2

Enclosures

NEMA Type 1 surface mounting enclosures are sheet steel with a thermoplastic wrap-around cover for convenience in wiring. The NEMA Type 1 enclosure is also available in jumbo and oversized versions that allow more space for wiring. A zinc alloy die casting is used for NEMA Type 4 enclosures, and a cast aluminum enclosure is offered for NEMA Type 3R, 7 & 9 applications.

Mounting

Open types without a pilot light fit standard single gang switch boxes, and can be used with any cover plate having a standard toggle cutout. Single-unit flush mounting types, including those with pilot light, are suitable for wall mounting in a standard switch box or for machine cavity mounting without a box. For difficult wall surfaces, such as concrete block or tile, a jumbo size flush plate is recommended. See the dimensional drawings for additional details and mounting provisions of enclosed types.

Pilot Light

Red or green neon pilot light units are available factory installed in NEMA Type 1 surface and flush mounting and NEMA Type 4 enclosures. They are also available as a field modification kit for NEMA Type 1 enclosures and gray flush plates.

Use order number as is for red pilot light; add a G to the number for a green pilot light.

Operator

Available with toggle handle or with removable key type operator to discourage unauthorized operation.

Manual Starters and Switches

Class 2510, 2511, 2512 Type K

Emergency Off Actuator

A toggle operator extender is available for NEMA Type 1 surface-mounted units. The extender has a red vinyl button that provides a fast and easy method for locating and switching the device's toggle operator into the Off position. The Emergency Off Actuator is available in kit form only for field installation.

Approvals

Same as for Type F; see page 4.

Reversing (Class 2511)

Type K reversing manual switches provide a compact means of starting, stopping, and reversing AC motors where overload protection is not required or is provided separately. They are suitable for use with three-phase squirrel cage motors and for single-phase motors which can be reversed by reconnecting motor leads. Two switches are used, one to connect the motor for forward rotation and one for reverse.

Manual Starters and Switches Integral Horsepower — Types M and T

CLASS 2510, 2511, 2512 INTEGRAL HORSEPOWER STARTERS — TYPES M AND T

Class 2510
Type M and T
in General Purpose
Enclosure

Size M-1, 3-Pole
Push Button Operated

Application Data

Types M and T integral horsepower manual starters provide convenient “On-Off” operation of small single phase, polyphase, or DC motors. Typical applications include small machine tools, pumps, fans, and conveyors. They feature push button or toggle operators and reliable overload protection. Pilot lights and auxiliary contacts are available.

Size	Available in NEMA Sizes M-0, M-1, and M-1P
Poles	AC: Two poles single phase; three poles polyphase DC: 2 poles (without Low Voltage Protection only)
Voltage Rating	600 VAC maximum 250 VDC maximum
Overload Relays	Melting alloy thermal overload relays have provisions for one Type B thermal unit for single phase starters and three Type B thermal units for three phase starters. All thermal units must be installed and the device reset before the starter contacts will operate. After overload relays have tripped, allow one or two minutes for the alloy to solidify before resetting.
Operator	Available with a push button or toggle operator in open and NEMA 1 versions. NEMA Types 4 and 12 utilize a direct-acting push button only. NEMA Types 4X, 7 & 9 utilize an external toggle to actuate a push button device inside.
Mechanism Lock Off	Both open devices and starters in NEMA Type 1 surface and flush mounting, NEMA Types 4, 4X, 7 & 9, and 12 enclosures may be locked in the Off or Stop position. The NEMA Type 1 surface mounting, 4, 4X, 7 & 9, and 12 enclosures may also be locked closed to prevent unauthorized entry.

Maintenance of Equipment

For proper performance, all equipment should be periodically inspected and maintained. Replacement contacts and interlocks are available in kit form to facilitate servicing and stocking. In addition, the service bulletin referenced in the table above contains an exploded view of the device with components clearly marked for easy identification by description and part number.

Manual Starters and Switches

Integral Horsepower — Types M and T

NEMA Type 4
Watertight and Dusttight
Stainless Steel

Starters will not operate without properly installing thermal units and then resetting the device. Thermal units must be installed so that markings face the front of the starter.

Accessories and Modification Kits

One auxiliary contact, either N.O. or N.C., can be easily added internally to any open or enclosed Type M or T manual starter. It occupies the space provided in either the upper right or left corners of the device. These contacts are for AC loads only.

A unique red pilot light assembly that clips into place is available factory-installed on NEMA Types 1, 4, 4X, 12, and flush enclosures. The assembly is also available as a field modification kit for NEMA Type 1 surface or flush mounting enclosures. The color cap assembly snaps into a knockout in the enclosure cover on the NEMA Type 1 enclosures. Pilot light kits are available for use on various voltages between 110 and 600 V. (Pilot light assemblies are not available for NEMA Type 7 & 9 enclosures.)

* NEMA Types 7 & 9 enclosures are cast-iron. NEMA Types 4X, 7 & 9 enclosures (cast aluminum) are available for outdoor use; to order these type of enclosures, replace the "R" in the catalog number with a "T". For additional information, contact your local Square D Field Sales Office.

▲ NEMA Type 12 enclosures may be field modified for outdoor applications.

★ Approved for group motor installations per NEC 430-53(c).

Class 2511 Reversing Manual Starters

Class 2511 reversing manual starters consist of two mechanically interlocked Class 2510 Type M or T manual starters. These starters are available in NEMA Type 1 surface-mounting enclosures or as open type. See page 19 for modifications.

Number of Poles	NEMA Size	Ratings		NEMA Type 1 Surface Mounting		Open Type

Corrosion-Resistant
Glass Polyester

Starters will not operate without properly installing thermal units and then resetting the device. Thermal units must be installed so that markings face the front of the starter.

NEMA Type 7 & 9
Hazardous Location
Cast Iron

Class 2512 Two-Speed Manual Starters

Class 2512 two-speed manual starters are for wye-connected separate winding motors only. They consist of two mechanically interlocked Class 2510 Type M or T manual starters. These starters are available with or without low voltage protection in NEMA Type 1 enclosures or open type. See page 19 for modifications.

Type AW2

Ball and Shaft Type

Fluted Type

CLASS 2601 REVERSING DRUM SWITCHES

Reversing drum switches are designed to start and reverse motors by connecting them directly across-the-line. The devices may be used with squirrel cage motors; single-phase motors designed for reversing service; and series, shunt, and compound DC motors. The applications should be such that across-the-line starting of the motors is not objectionable, unless other means is provided for limiting starting current and torque. Class 2601 drum switches are field convertible from maintained to momentary operation.

Application Data

The reversing drum switches find application wherever manual reversing control is desired. They are particularly suited for use on machine tools, woodworking machines, and similar types of equipment. Examples include lathes, milling machines, planers, grinders, shapers, and boring mills. Other possible applications include door operators, small hoists, and conveyor belts.

Overload and low voltage protection are not incorporated in these reversing drum switches. Should the power fail, the contacts will remain closed, unless assembled for momentary operation, and the handle stays in the selected position. The motor will restart when the power returns.

Voltage	600 VAC Maximum 250 VDC Maximum
Contact Mechanism	Large movable contact segments are rigidly attached to the main operating shaft. They are fully insulated from each other and from the shaft. Stationary contact fingers are mounted in polymeric blocks. Both movable and stationary contacts are plated for maximum life. Extremely accessible terminals are provided for easy wiring. Type A is provided with screw type terminals and Type B is provided with pressure wire connector terminals. Contacts are not replaceable.
Operating Mechanism	As supplied from the factory, the operating mechanism is assembled for maintained position operation. That is, when the handle is moved to the forward or reverse position, it will remain there until moved. The mechanism can be easily converted, with no additional parts needed, to provide "spring return to off" operation. This conversion is accomplished by removing the handle screw and handle, turning the shaft 180 degrees, and then replacing the handle and handle screw.
Optional Handles	Both the NEMA Type 1 and NEMA Type 4 devices offer as standard a one piece die cast handle. An optional ball and shaft or fluted handle is available. Drum switches with optional handles are available on a factory Quick-Ship basis. To order, add the letter B (for a ball and shaft type handle) or F (for fluted type handle) to the type number.
Enclosures	The polymeric NEMA Type 1 enclosure is suitable for indoor applications when normal atmospheric conditions prevail. The NEMA Type 4 enclosure is suitable for applications requiring watertight and dusttight capabilities. Generous wiring space is provided in both types. Two knockouts or openings for 1/2" conduit entries are located in the bottom plate of the AG/BG types, while two 1/2" conduit entries with hubs are provided as standard in AW/BW types. A single captive screw holds the cover on NEMA Type 1 enclosures, while three captive screws hold the cover on NEMA Type 4 enclosures. Removal of the cover allows free access to three sides of the switch mechanism. Large legible nameplates are securely attached to the enclosures to clearly indicate switching positions and to provide complete rating information. An instruction sheet showing motor connections is also provided.
