

Fully equipped Termisafe provides quick installation

Hylec-APL, specialist supplier of electrical and electronic components, is launching a new surface mount junction box supplied complete with terminal block, designed to provide convenience and safety for in-line connections. The compact enclosure is supplied with a 3 pole terminal block and all the necessary screws and fixing hardware necessary to create a quick & safe connection.

The new Termisafe connection from Hylec-APL is moulded from white UL94 V0 rated Polypropylene which makes it fully flame retardant. The junction box's dimensions are 70mm x 40mm x 27mm ensuring that it is compact and unobtrusive while still providing ample room to host a secure connection. The removable lid fastens with two screws to comply with all safety regulations, while mounting is via through moulded lugs at each end of the Termisafe's base.

Unlike many similar products, the Termisafe is supplied with an approved 3 pole terminal block and all the necessary fixing hardware required to make a connection. The terminal block is constructed from UL94 V0 Polyamide, has a max rating of 24A / 450 V and is UL / VDE / IMQ approved. The connections are secured by screws with cable retention provided via clamps within the box.

Terry Spriggs, speaking for Hylec-APL: "The new Termisafe is a reliable way of securing inline connections whilst maintaining easy access when required. We believe that junction boxes should be supplied complete with terminal blocks in order to simplify the installation process and reduce overall installation time."

The Termisafe is promoted exclusively by Hylec-APL based in Wellingborough and is available via national UK stockists and direct to distributors and contractors from Hylec-APL. Hylec-APL provides free impartial advice and product samples to help ensure the right connection is made every time. For more information and to see more of their products please call or email on sales@hylec-apl.com.

About HYLEC-APL

Hylec-APL specialises in the bulk supply of Electronic and Electro-Mechanical components to OEMs, Sub-Contract manufacturers, and Distribution organisations. Hylec-APL maintains a large UK stock profile, which reflects customer requirements at the company's centrally located HQ and distribution centre in Northants.

Hylec-APL provides a wide range of product options and solutions including many thousands of different line items. From PCB Connectors and Terminal Blocks, to Cable Glands, Cable Accessories, LEDs, Switches, Buzzers, Relays, IP Rated Connectors and DIN Rail Mounting Enclosures, all items are quality assured and supported by dedicated technical expertise.
