## Ultra Low Profile 0805 Balun 50Ω to 50Ω Balanced

### Description

The B0322J5050A00 is a low profile sub-miniature balanced to unbalanced transformer designed for differential inputs and output locations on next generation wireless chipsets in an easy to use surface mount package covering the GSM frequency. The B0322J5050A00 is ideal for high volume manufacturing and is higher performance than traditional ceramic and lumped element baluns. The B0322J5050A00 has an unbalanced port impedance of 50Ω and a 50Ω balanced port impedance. This transformation enables single ended signals to be applied to differential ports on modern semiconductors. The output ports have equal amplitude (-3dB) with 180 degree phase differential. The B0322J5050A00 is available on tape and reel for pick and place high volume manufacturing.

### Detailed Electrical Specifications: Specifications subject to change without notice.

Features:	Parameter	ROOM (25°C)			Unit
		Min.	Typ.	Max	
<ul style="list-style-type: none"> <li>300 – 2200 MHz</li> <li>0.7mm Height Profile</li> <li>50 Ohm to 2 x 25 Ohm</li> <li>Low Insertion Loss</li> <li>Surface Mountable</li> <li>Tape &amp; Reel</li> <li>Non-conductive Surface</li> <li>RoHS Compliant</li> </ul>	Frequency	300		2200	MHz
	Unbalanced Port Impedance		50		Ω
	Balanced Port Impedance		50		Ω
	Return Loss	12.2	16		dB
	Insertion Loss*		1.3	1.6	dB
	Amplitude Balance		1.1	1.2	dB
	Phase Balance		17	20	Degrees
	CMRR		15		dB
	Power Handling			2	Watts
	Operating Temperature	-55		+85	°C

\* Insertion Loss stated at room temperature (Insertion Loss is approximately 0.1 dB higher at +85 °C)

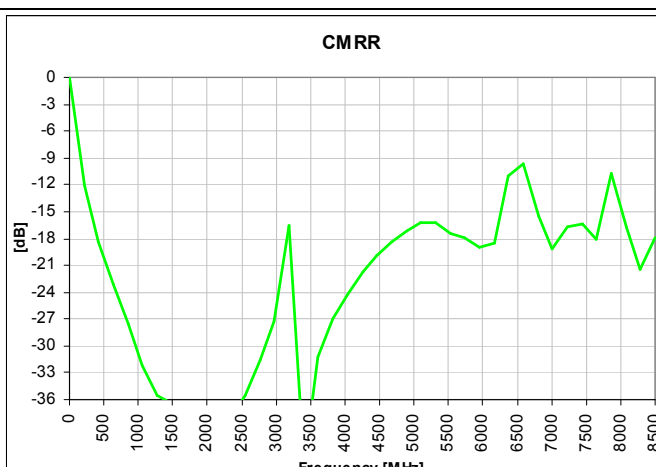

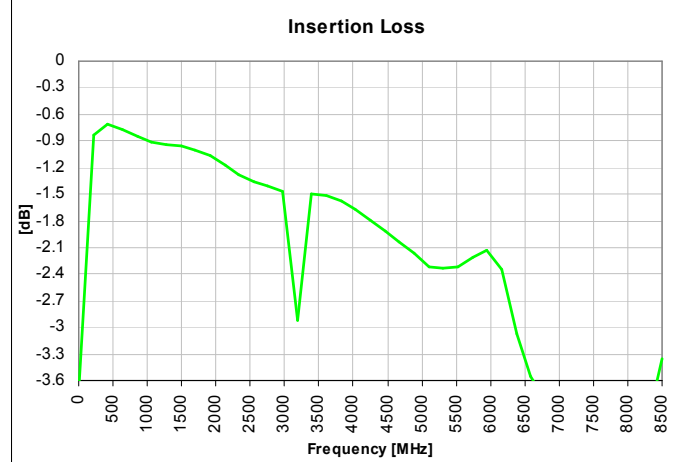

### Outline Drawing

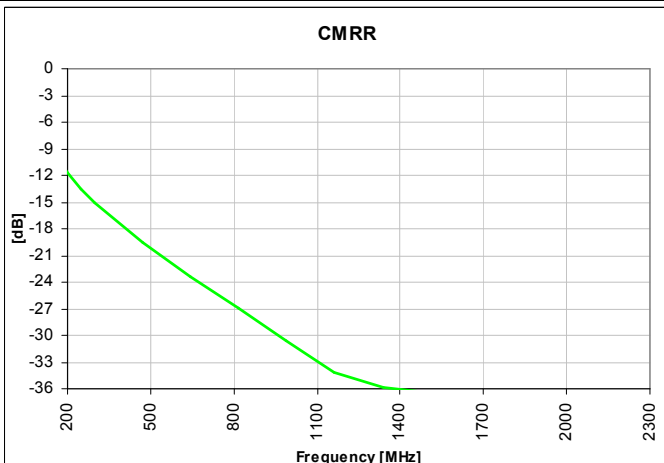

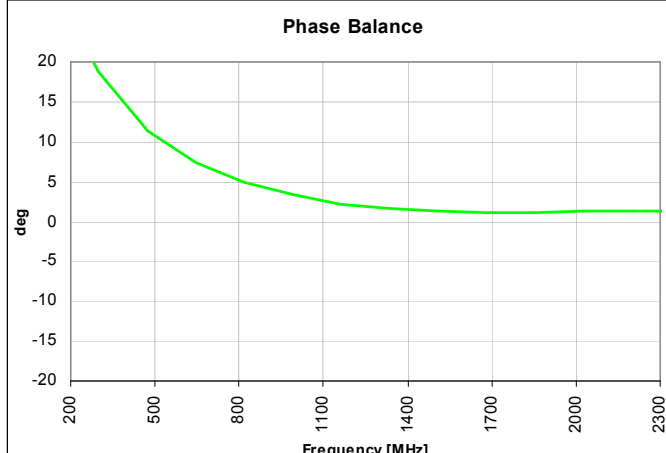

Mechanical Outline  
-Dimensions are in Millimeters  
-Tolerances are Non-Cumulative

Pin	Designation
1	Unbalanced Port
2	GND
3	Balanced Port
4	Balanced Port
5	Do not connect
6	NC

## Typical Broadband Performance: 0 MHz. to 8.5 GHz.

### Typical Performance: 200 MHz. to 2300 MHz.

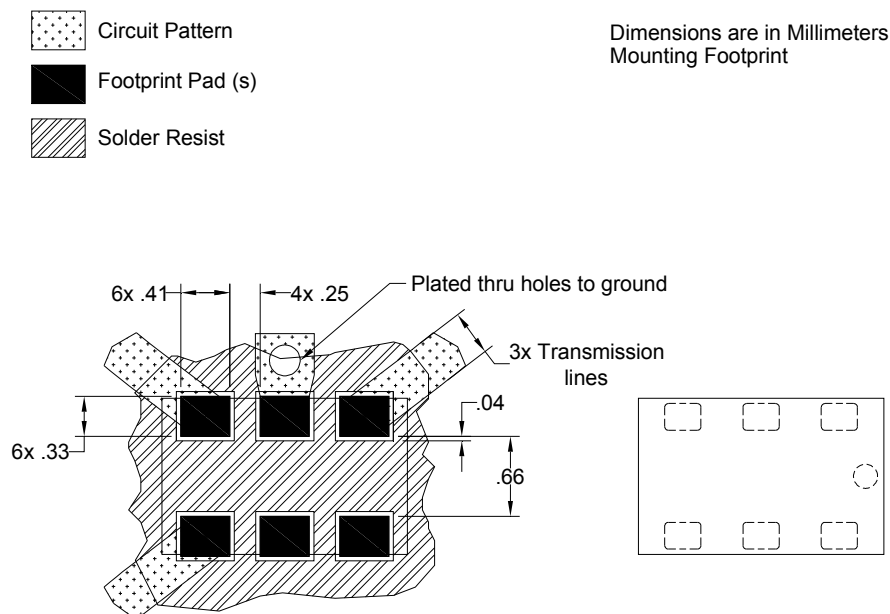

## Mounting Configuration:

In order for Xinger surface mount components to work optimally, the proper impedance transmission lines must be used to connect to the RF ports. If this condition is not satisfied, insertion loss, Isolation and VSWR may not meet published specifications.

All of the Xinger components are constructed from organic PTFE based composites which possess excellent electrical and mechanical stability. Xinger components are compliant to a variety of ROHS and Green standards and ready for Pb-free soldering processes. Pads are Gold plated with a Nickel barrier.

An example of the PCB footprint used in the testing of these parts is shown below. In specific designs, the transmission line widths need to be adjusted to the unique dielectric coefficients and thicknesses as well as varying pick and place equipment tolerances.

### Packaging and Ordering Information

Parts are available in reel and are packaged per EIA 481-2. Parts are oriented in tape and reel as shown below. Minimum order quantities are 4000 per reel. See Model Numbers below for further ordering information.
