IMMERSION RATING

MATEABLE BY HAND

Our DEUTSCH DTSK power connectors feature latch-style mating and an integrated secondary lock. Individual wire seals with a rear protective cover help protect the connections from dirt, dust and water ingress, making the DTSK connectors an effective option for applications that require an environmentally sealed connector. DTSK connectors can be used inline or mounted as pass-through connectors with the addition of an optional flange.

\* Requires separate AS568-212 O-Ring for proper mounting fit
