## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## SINGLE Pch HIGH-SIDE SWITCH FOR USB

## DESCRIPTION

The  $\mu$ PD16876 is a power switch IC with an overcurrent limiter that is used for the power bus of a Universal Serial Bus (USB). This product has one Pch power MOSFET circuits, which has a low-on resistance (100 m $\Omega$  TYP.), in its switching block. This product boasts an operating current consumption of as low as 100  $\mu$ A (MAX.).

In addition, the IC is also equipped with an overcurrent detector that is essential for a host/hub controller conforming to the USB Standard, so that the IC can report an overcurrent to the controller. Moreover, a thermal shutdown circuit and an undervoltage lockout circuit are also provided as the protection circuits of the IC.

This product has one channel of power switch, control input pin, and flag output pin to simultaneously control one USB port with a single IC.

## FEATURES

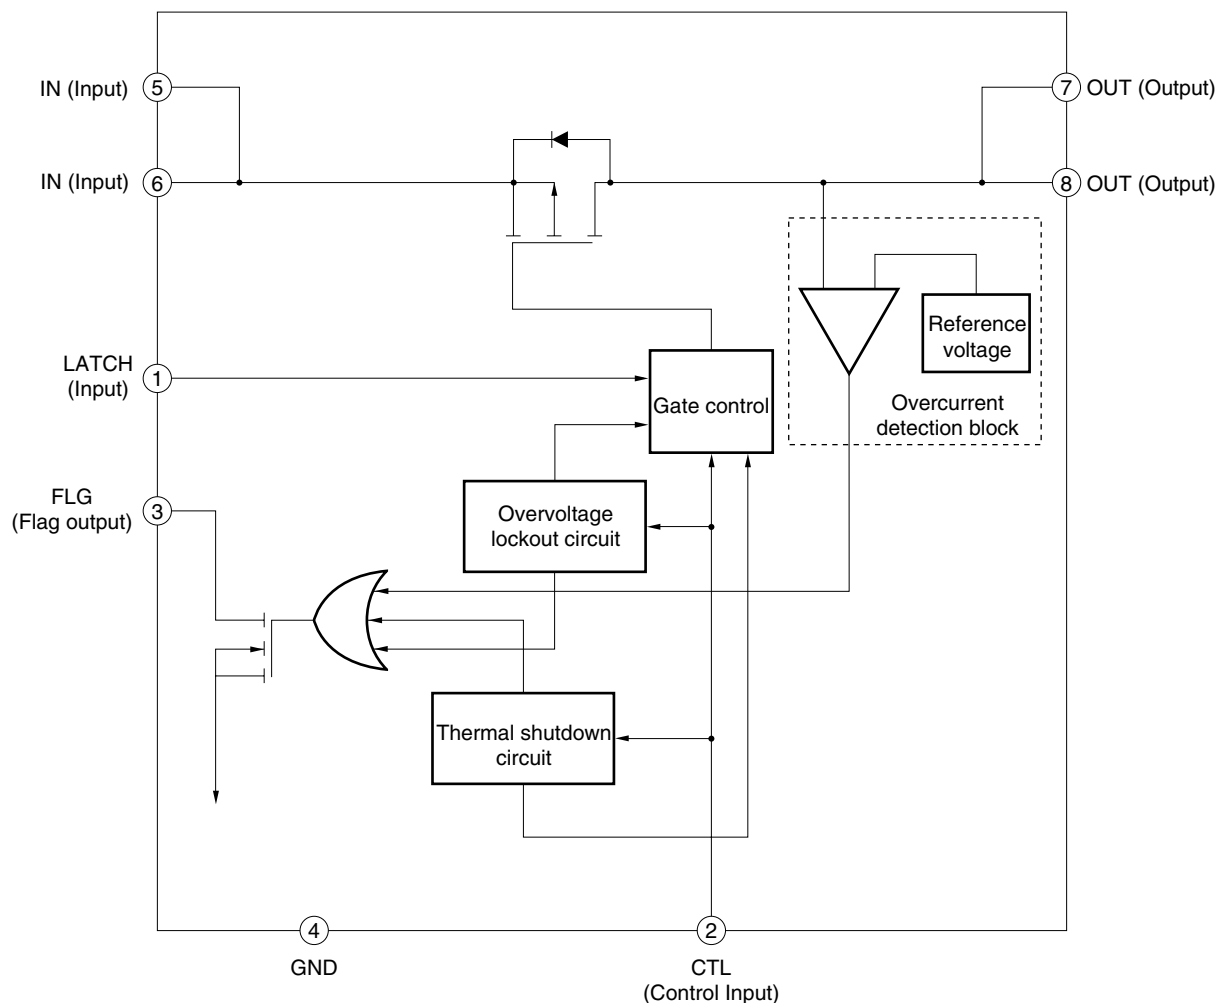

- One P-ch power MOSFET circuit
- Overcurrent detector that outputs active-low control signal from detection report pin
- Overcurrent limiter to prevent system voltage drop
- Thermal shutdown circuit
- Undervoltage lockout circuit
- This control circuit can be turned on and off independently of the others by a control pin.
- 8-pin SOP package

## ORDERING INFORMATION

Part Number	Package
$\mu$ PD16876G	8-pin SOP (5.72 mm (225))

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.  
Not all devices/types available in every country. Please check with local NEC representative for availability and additional information.

# BLOCK DIAGRAM

## NOTES ON CORRECT USE

- No internal resistor is connected to input pins LATCH (pin 1) and CTL (pin 2). When using the μPD16876, therefore, be sure to set the voltage level of these input pins to "H" or "L".
- Plural terminal (IN, OUT) is not only 1 terminal and connect all terminals.

# PIN CONFIGURATION (Top View)

# PIN DESCRIPTION

Pin No.	Pin Name	Pin Function
1	LATCH	Select LATCH function. "H" is effective LATCH function.
2	CTL	Control input: Active-low, TTL input
3	FLG	Detection flag (output): Active-low, Nch open-drain
4	GND	Ground
5/6	IN	Power input: Source of MOSFET for output. Power supply to internal circuitry of IC
7/8	OUT	Switch output: Drain of MOSFET for output. Usually, connected to load.

# TRUTH TABLE (H: High level, L: Low level, ON: Output on, OFF: Output off, X: H or L)

CTL (In)	FLG (Out)	OUT (Out)	Operation mode
L	H	ON	Normal operation
H	H	OFF	Switch OFF/Stand by mode
L	L	ON	Overcurrent detection
X	L	OFF	Thermal shutdown circuit operation
X	L	OFF	Undervoltage lockout circuit operation

LATCH	Operation mode
H (LATCH mode)	After overcurrent detection circuit operates, output is latched.
L (non LATCH mode)	After overcurrent detection circuit operates, output is operated limited current function.

**ABSOLUTE MAXIMUM RATINGS (Unless otherwise specified,  $T_A = 25^\circ\text{C}$ )**

Parameter	Symbol	Conditions	Ratings	Unit
Input voltage	$V_{IN}$		-0.3 to +6	V
Flag voltage	$V_{FLG}$		-0.3 to +6	V
Flag current	$I_{FLG}$		50	mA
Output voltage	$V_{OUT}$		$V_{IN}+0.3$	V
Output current	$I_{OUT}$	DC	+0.5 ( $V_{IN} = V_{CTL} = 5\text{ V}$ ) -0.1 ( $V_{IN} = 0\text{ V}$ , $V_{OUT} = 5\text{ V}$ )	A
		Pulse width $\leq$ Single 100 $\mu\text{s}$ pulse	+3	
Control input	$V_{CTL}$		-0.3 to +6	V
Total power dissipation	$P_D$		300	mW
Operating temperature range	$T_A$		-40 to +85	$^\circ\text{C}$
Junction temperature <sup>Note</sup>	$T_{CH\text{ MAX}}$		+150	$^\circ\text{C}$
Storage temperature	$T_{stg}$		-55 to +150	$^\circ\text{C}$

**Note** This product has an internal thermal shutdown circuit (operating temperature: 150 $^\circ\text{C}$  or higher TYP.)

**RECOMMENDED OPERATING RANGE (Unless otherwise specified,  $T_A = 25^\circ\text{C}$ )**

Parameter	Symbol	MIN.	TYP.	MAX.	Unit
Input voltage	$V_{IN}$	+3		+5.5	V
Operating temperature range	$T_A$	0		+70	$^\circ\text{C}$

## ELECTRICAL SPECIFICATIONS

Thermal shutdown circuit	Thermal shutdown circuit operating temperature	150°C or higher		p.12 When Thermal Shutdown Circuit Operates

## DESCRIPTION OF FUNCTIONS

### 1. Overcurrent Detection

This IC detects an overcurrent in a range of 0.6 to 1.25 A (0.9 A TYP.) (the USB Standard defines that an overcurrent is 0.5 A MAX.). When the IC detects an overcurrent, the FLG pin goes low (active) and reports the result of detection to the control IC. At this time, the switch is kept ON and the current limiter is activated. In this way, an overcurrent status that lasts for a long time can be prevented.

By deasserted the CTL pin inactive by the control IC, the switch is turned OFF and the FLG pin goes back high. Therefore, the CTL signal must be deasserted inactive as soon as the controller IC has detected that the FLG pin has gone low, to avoid overheating this IC. Once the switch has been turned OFF, it turns back ON again only when the CTL signal is asserted active while the FLG pin is high.

To prevent an inrush current being detected by mistake, a deadband time (overcurrent detection delay time) is set to elapse before the overcurrent detector is activated. The duration of this deadband time is 20  $\mu$ s TYP.

While the overcurrent limiter is activated, the power consumption of the device may abruptly increase. As a result, the junction temperature may also rise. Make sure that the CTL signal is deasserted inactive and that the switch is turned OFF before the absolute maximum rating is exceeded.

### 2. Undervoltage Lockout Circuit (UVLO)

This circuit prevents malfunctioning of the switch due to fluctuation in supply voltage.

When power is turned on (2.5 V or less TYP.) or off (2.3 V or less TYP.), the OUT and FLG pins have the following status:

OUT: OFF

FLG: "L" (= 0 V)

The above figure does not show the actual waveform. For the related characteristic waveform, refer to Major Characteristic Curves.

### 3. Behavior When Power Is Turned ON/OFF

This IC performs a soft-start operation on power application. This is to prevent an overcurrent from flowing through the IC on power application while the high-capacity capacitor connected to the output pin is charged.

Power ON: Soft start (2.5 to 8 ms)

Power OFF: No control (10 μs MAX.)

The above figure does not show the actual waveform. For the related characteristic waveform, refer to Major Characteristic Curves.

### 4. Output Latch Functional Change

LATCH = "H": This IC has the control terminal (LATCH terminal) which latches the output current limitation after over current detection.

An output latch function is explained below.

The output switch is turned off irrespective of the state of a CTL terminal after over current detection.

Again, in order to make a switch into an ON state, it is necessary that a CTL terminal is setting to Low level.

This function can be used, when you want to make a CTL terminal "L" fixation and to always consider as an ON state, or when a USB controller to switch-ON/OFF control is unnecessary.

LATCH = "L": A current limitation circuit operates after over current detection.

A limitation function is continued until the over current is eliminated.

After current detection, when abnormal condition is eliminated, output returns to an ON state.

This function serves as specification which suited USB specification.

## OPERATION SEQUENCE

### Power ON/OFF

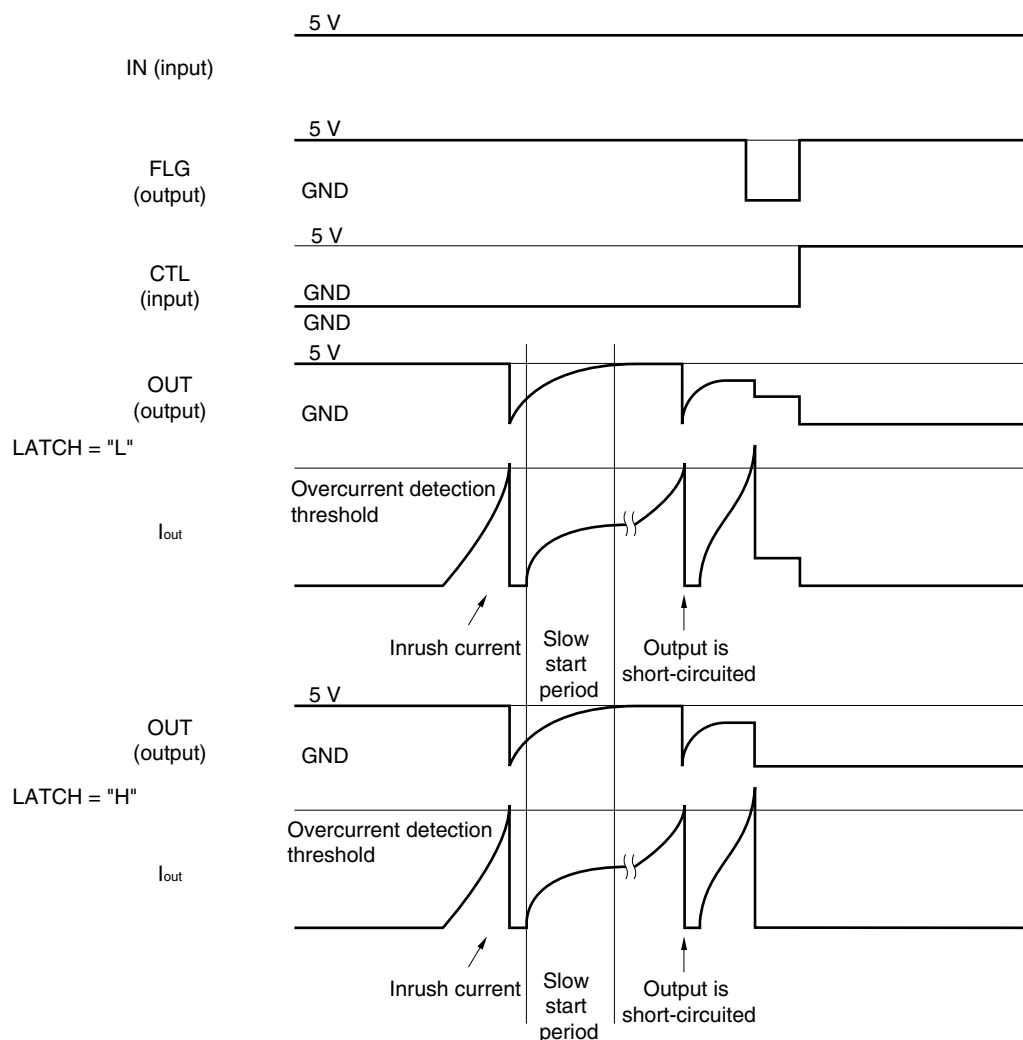

If the CTL signal is asserted active after power has been turned ON, OUT executes the soft-start operation (output transition time: 8 ms MAX.). In addition, FLG output is fixed to “L” if the supply voltage is lower than the operating voltage of the undervoltage lockout circuit (UVLO) on power application.

If all the CTL pins are inactive when power is supplied, the IC enters the standby status ( $I_{DD} = 5 \mu A$  MAX.).

### When Control Signals Are Input

# On Detection of Overcurrent

If an overcurrent is detected after the overcurrent detection delay time of 20 μs, the IC executes a slow-start operation (output rise time: 5 ms TYP.) again.

If an overcurrent is detected while the IC is executing the slow-start operation again, it is assumed that the output is short-circuited and the FLG pin goes low. When the CTL signal is deasserted inactive, OUT is turned OFF and FLG goes high. If the CTL signal is asserted active, OUT is turned back ON unless the undervoltage lockout circuit or thermal shutdown circuit is activated.

When LATCH = "H", output is turned off at the timing of FLG = "L".

## When Thermal Shutdown Circuit Operates

While the thermal shutdown circuit is activated, the output pins are in the OFF status. However, the IC does not enter the standby status even if all the CLT pins are deasserted inactive at the same time.

The thermal shutdown circuit is not activated even if the junction temperature exceeds 150°C TYP. while the IC is in the standby mode (when CTL1 and CTL2 pins are inactive).

## TEST CIRCUIT

MAJOR CHARACTERISTIC CURVES (Unless otherwise specified,  $T_A = 25^\circ\text{C}$ ,  $V_{IN} = 5\text{ V}$ )

## APPLICATION CIRCUIT

The application circuits and their parameters are for references only and are not intended for use in actual designin's.

PACKAGE DRAWING

8-Pin Plastic SOP (5.72 mm (225)) (Unit: mm)

## RECOMMENDED SOLDERING CONDITIONS

The μPD16876 should be soldered and mounted under the following recommended conditions.

For soldering methods and conditions other than those recommended, contact your NEC sales representative.

### Surface Mount Type

For the details of the recommended soldering conditions, refer to the document **Semiconductor Device Mounting Technology Manual (C10535E)**.

### μPD16876G

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 sec. Max. (at 210°C or higher), Count: two times, Exposure limit: Not limited <sup>Note</sup>	IR35-00-2
VPS	Package peak temperature: 215°C, Time: 40 sec. Max. (at 200°C or higher), Count: two times, Exposure limit: Not limited <sup>Note</sup>	VP15-00-2
Wave soldering	Solder bath temperature: 260°C Max., Time: 10 sec. Max., Count: once, Exposure limit: not limited <sup>Note</sup>	WS60-00-1
Partial heating	Pin temperature: 300°C Max., Time: 3 sec. Max., Exposure limit: not limited <sup>Note</sup>	—

**Note** After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

**Cautions** Do not use different soldering methods together (except for partial heating).

NEC Semiconductor Device Reliability/Quality Control System	C10983E
Semiconductor Selection Guide	X13769E

## NOTES FOR CMOS DEVICES

**① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS**

Note:

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

**② HANDLING OF UNUSED INPUT PINS FOR CMOS**

Note:

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

**③ STATUS BEFORE INITIALIZATION OF MOS DEVICES**

Note:

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

## Regional Information

Some information contained in this document may vary from country to country. Before using any NEC product in your application, please contact the NEC office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

- **The information in this document is current as of March, 2001. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products and/or types are available in every country. Please check with an NEC sales representative for availability and additional information.**
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC semiconductor products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of customer's equipment shall be done under the full responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC semiconductor products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades:  
 "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.  
 "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots  
 "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)  
 "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.

(Note)

- (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
