

LUXEON T

High-Efficacy, Illumination
Grade LED light source

Introduction

LUXEON® T emitters are illumination grade LEDs designed to deliver high efficacy with high flux density to enable tight beam control in directional and high lumen applications. With *Freedom from Binning*™ and leading performance, LUXEON T emitters allow system optimization to achieve the highest possible efficacy and the flexibility to reduce the number of emitters, all without compromising on high color rendering across the full Correlated Color Temperature (CCT) range from 2700K to 5000K.. With tight CCT control, LUXEON T ensures consistency in system color point.

LUXEON T

- Superior efficacy and light output from a compact source
- Optimized for efficacy driven applications with typical V_f of 2.7V and lowest thermal resistance, 3K/W
- Delivers high luminance ideal for directional lighting
- Specified, targeted and tested hot, at real world operating temperatures, $T_j = 85^\circ\text{C}$ to ensure in application performance
- *Freedom From Binning* delivers color consistency within a single 3 or 5-step MacAdam ellipse
- Proven reliability
- Exceeds ENERGY STAR lumen maintenance requirements
- UL-recognized component [E352519] with level 4 enclosure consideration

Key Applications

- Lamps
- Downlights
- Indoor
- Highbay and lowbay
- Outdoor
- Architectural

General Information

Product Nomenclature

LUXEON T emitters are specified and binned “hot” under conditions comparable to those found in “real-world” lighting products. The test conditions for LUXEON T are 700 mA DC with junction temperature at 85°C.

The part number designation is explained as follows:

L X H c – FW xx –Y

Where:

c – designates minimum CRI performance (7 for 70 CRI, 8 for 80 CRI, 9 for 90 CRI)

xx – designates nominal ANSI CCT (27 for 2700K, 30 for 3000K)

Y – 3 designates 3 SDCM and 5 designates 5 SDCM

Therefore 80 CRI products tested and binned at 2700K will have the part numbering scheme:

L X H 8 – FW 2 7

Lumen Maintenance

LUXEON T products are tested in compliance with LM-80. Please visit www.philipslumileds.com/support/documentation/lumen-maintenance or contact your local Philips Lumileds Technical Solutions Manager for TM-21 extrapolations or other support.

Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON T is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS and REACH directives. Philips Lumileds will not intentionally add the following restricted material to the LUXEON T: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Notes for Table 4:

1. Proper current derating must be observed to maintain junction temperature below the maximum.
For additional information on thermal measurement guidelines please refer to Application Brief AB106.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple", with frequencies
3. ≥ 100 Hz and amplitude ≤ 200 mA are acceptable, assuming the average current throughout each cycle does not exceed 1000 mA.
4. Pulsed operation with a peak drive current of 1200 mA is acceptable if the pulse on-time is ≤ 5 ms per cycle and the duty cycle is $\leq 50\%$

Product Binning and Labeling

Purpose of Product Binning

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux and forward voltage (V_f). Color is offered in a single 3-step or 5-step MacAdam ellipse color space centered on the ANSI CCT color bins. For additional information please review the MacAdam ellipse technical definition section.

Decoding Product Bin Labeling

LUXEON T emitters are labeled using a four digit alphanumeric code (CAT code) depicting the bin values for emitters packaged on a single reel. All emitters packaged within a reel are of the same 3-variable bin combination. Reels of LUXEON T emitters are labeled with a four digit alphanumeric CAT code following the format below

ABCD

A = Flux bin (L, M, etc.)

BC = Color bin (73, 7A, 7B etc.)

D = V_f bin (P, R)

Luminous Flux and Forward Voltage Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON T emitters (tested and binned at 700 mA and $T_j = 85^\circ\text{C}$). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO2 emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, digital imaging, display and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at www.philipslumileds.com.
