FUNCTIONAL DESCRIPTION

The 1513-series device is a fixed, single-input, single-output, passive delay line. The signal input (IN) is reproduced at the output (OUT), shifted by a time (T_D) given by the device dash number. The characteristic impedance of the line is given by the letter code that follows the dash number (See Table). The rise time (T_R) of the line is 20% of T_D , and the 3dB bandwidth is given by $1.75 / T_D$.
