### TOOLS TO ASSIST

#### Panel Layout

2D and 3D CAD files for some products to facilitate panel layouts found at [www.cooperbussmann.com](http://www.cooperbussmann.com)

#### Engineering Services for SCCR

OSCAR™ Compliance Software Eliminates the Guesswork in Assembly Short-Circuit Current Rating (SCCR) Calculations. The Cooper Bussmann innovative OSCAR™ Compliance Software assists customer compliance with new Code and standards requirements for short-circuit current ratings as they relate to industrial control panels, equipment and assemblies. Go to [www.cooperbussmann.com](http://www.cooperbussmann.com)

SCCR Panel Design Review for Improving Your Assembly SCCR. If your SCCR needs improvement, contact the Cooper Bussmann team for a design review. We guarantee our panel SCCR review service for UL508A Supplement SB pre-certification.

#### Other Application Information on SCCR

Publications:

- Advanced Guide To Understanding Assembly Short-Circuit Current Rating
- Simplified Guide To Understanding Short-Circuit Current Rating – Find It, Fix It, Forget it
- SPD (Selecting Protective Devices) Sections on Industrial Control Panels and also Conductor & Terminations.

### Technical Assistance

#### Application Engineering

Application Engineering assistance is available to customers. The Application Engineering team is staffed by engineers and available by phone with technical and application support Monday – Friday, 8:00 a.m. – 5:00 p.m. Central Time.

Application Engineering can be reached via phone, fax or email:

- Phone: 636-527-1270
- Fax: 636-527-1607
- E-mail: [fusetech@cooperbussmann.com](mailto:fusetech@cooperbussmann.com)

#### Online Resources

Visit [www.cooperbussmann.com](http://www.cooperbussmann.com) for the following resources:

- Arc-flash calculator
- OSCAR™ compliance software
- Training modules

#### Services

- Engineering
- Training
- Testing

Contact us for more information on Services:

- E-mail: [services@cooperbussmann.com](mailto:services@cooperbussmann.com)

# Selection Table for SCCR Power Distribution Blocks and Terminal Blocks

## Short-Circuit Current Rated Power Distribution Blocks

Cooper Bussmann offers three distinctly different styles of short-circuit current rated power distribution blocks (PDBs) and terminal blocks (TBs) to match different application needs. The differences are whether the power distribution blocks are enclosed or not, and whether they are UL1953 Listed PDBs or UL1059 Recognized TBs, which have different minimum spacing requirements. The table on this page can assist in the selection of the right series for your application requirements.

### Why these are important?

Assembly short-circuit current ratings (SCCRs) are now required in the 2005 NEC® and UL508A Listed Industrial

Control Panels. Marking the SCCR on Industrial Control Panels (NEC® 409.110), Industrial Machinery Electrical Panels (NEC® 670.3(A)), and HVAC equipment (NEC® 440.4(B)) is now required by the National Electrical Code. PDBs or TBs not marked with a SCCR are typically one of the weakest links and may limit an assembly to no more than 10kA SCCR. The PDBFS and PDB Series have increased spacing required where used in feeder circuits in equipment listed to UL508A (UL1059 TBs must be evaluated for proper spacings). Also, for building wiring systems, the PDBFS Series and PDB Series power distribution blocks can be used to meet the new 2005 NEC® requirements in section 376.56(B) for PDBs in wireways.

*More application information on pages 19-23.*

## Selection Table

Product	Catalog Page	UL	Enclosed	High SCCR*	Spacing** 1" Air 2" Surface	Industrial Control Panels UL 508A Branch Circuit	Industrial Control Panels UL 508A Feeder Circuit	HVAC UL 1995	Wireways NEC® 376.56(B) (Requires UL 1953)
Series PDBFS	3	UL 1953 Listed Power Distribution Blocks	Yes <sup>†</sup>	Yes	Yes	Yes	Yes	Yes	Yes
Series PDB	9	UL 1953 Listed Power Distribution Blocks	No***	Yes	Yes	Yes	Yes	Yes	Yes w/optional cover
Series 16XXX	13	UL 1059 Recognized Terminal Blocks	No***	Yes	No****	Yes	No****	Yes	No
NDN63-WH-UL, NDN111-WH-UL, 14002-3-UL, TB300-03SP-UL	16	UL 1059 Recognized Terminal Blocks	No	Yes	No	Yes	No	Yes	No

<sup>†</sup>IP-20 finger-safe under specific conditions, see datasheet page 8.

<sup>\*</sup>When protected by proper fuse class with maximum ampere rating specified or smaller.

<sup>\*\*</sup> See PDB Spacing Requirements for Equipment table below.

<sup>\*\*\*</sup>Optional covers are available. Not IP-20, but provide a safety benefit.

<sup>\*\*\*\*</sup>No, except: Yes, if single pole units installed with proper spacings.

## PDB & TB Minimum Spacing Requirements for Equipment

UL Standard	Spacing between live parts of opposite polarity		Spacing between live parts and grounded parts or enclosure @600V
	Through air @600V	Over surface @600V	
508A Feeder Circuits	1"	2"	1"
508A Branch Circuits	3/8"	1/2"	1/2"
1995 HVAC	3/8"	1/2"	1/2"

Note: Refer to Specific UL standards for complete spacing details.

Series PDBFS

Series PDB

Magnum Terminal Blocks

Series 162 and 163

# Series PDBFS Enclosed Power Distribution Blocks

## Feature/Benefits

- Enclosed for enhanced safety; IP-20 finger-safe under specific conditions, see page 8
- High Short-Circuit Current Ratings up to 200,000A: PDBs do not have to be a weak link in achieving a high SCCR for an industrial control panel
- Suitable for installation in wireways and industrial control panel feeder and branch circuits. Listed to UL1953 which has minimum spacing requirements at 600V of at least 1" through air and 2" over surface
- Small footprint saves panel space. Stack side by side and still meet 1" and 2" spacing requirements
- For 2D and 3D CAD drawings visit [www.cooperbussmann.com](http://www.cooperbussmann.com)

## Agency/Standards

- UL Listed 1953, Guide QPQS, File E256146
- CSA Certified, Class 6228-01, File 15364
- CE component IEC 60947-7-1
- IEC 60529, IP-20 (Finger Safe) under specific conditions, see page 8

## Electrical

- 600Vac or dc (UL 1953), 690Vac or dc (IEC)
- Short-Circuit Current Ratings up to 200kA, see table below
- Ampacities up to 760 Amps
- 75°C rated connectors
- CU Wire range 14 AWG to 500 kcmil or 2.5 to 240 mm<sup>2</sup>

## Mechanical

- DIN rail or panel mount; PDBFS330 & PDBFS504 panel mount only
- Captive termination screws; screws do not get misplaced
- Wire ready: captive termination screws shipped backed out to save time on conductor installation
- Sliding DIN rail latch for easy mounting
- Single pole, gang mountable for multiple pole applications with interlocking dovetail accessory (optional Part 2A1279) One pin interlocks two units, two pins to interlock three units (see illustration on page 6)
- Flammability, UL 94V0
- Tin-plated AL connectors suitable for CU conductors
- Elongated hole for panel mounting; easier mounting with greater flexibility in matching up with drilled panel holes
- DIN rail end anchors required to prevent damage to block when torquing, anchors not offered by Cooper Bussmann

# Series PDB Power Distribution Blocks

## Feature/Benefits

- High Short-Circuit Current Ratings up to 200kA  
PDBs do not have to be a weak link in achieving high SCCR for an industrial control panel
- Suitable for installation in wireways (with optional covers) and industrial control panel feeder and branch circuits.  
Listed to UL1953 which has minimum spacing requirements at 600V of at least 1" through air and 2"

## Agency/Standards

- UL Listed 1953, Guide QPQS, File E256146

## Electrical

- 600Vac or dc (UL 1953)
- Short-Circuit Current Ratings up to 200kA, see table
- 75°C rated connectors, ampacities up to 310A
- Wire range 14 AWG to 350 kcmil CU
- Spacing between uninsulated opposite polarities or ground meets UL 1953 which requires at least 1" through air and 2" over surface for 301 to 600V

## Mechanical

- Panel mount
- Flammability, UL 94V0
- Tin-plated AL connectors suitable for CU conductors

# Series PDB Power Distribution Blocks

## Optional covers

Covers are ordered for each individual pole, i.e. three

1-pole covers for 3-pole block, see table A.

Except PDB321 blocks have one cover for 1, 2 or 3 pole versions, see table B. (*Shipped with mounting screws*)

**Table A**

Block	Cover
PDB2XX-(pole):	CPB162-1
PDB3XX-(pole):	CPDB-1

**Table B**

Block	Cover
PDB321-1	CPDB-1
PDB321-2	CPDB-2
PDB321-3	CPDB-3

## Series 163 Cover

Supplied with (4) #4 thread-cutting screws assembled as shown

## Series 162 Cover

# Series 16XXX Terminal Blocks

## Feature/Benefits

- High Short-Circuit Current Ratings up to 200kA
- UL1059 Recognition

## Agency/Standards

- UL 1059 Recognized, Guide XCFR2, File E221592
- General Industry Class per UL 1059, usage category C
- CSA Certified, Class 6228-01, File 15364

## Electrical

- 600Vac or dc
- Short Circuit Current Ratings up to 200kA, see table
- Ampacities up to 310 Amps
- 75°C rated connectors
- Wire range 14 AWG to 350 kcmil CU

## Mechanical

- Panel mount
- Flammability, UL 94V0
- Tin-plated AL connectors suitable for CU conductors

Series 162 and 163

## 14002-3-UL Barrier Terminal Block

### Agency/Standards

- UL 1059 Recognized, Guide XCFR2, File E62622
- General Industry Class per UL 1059, usage category C

### Electrical

- 600Vac or dc
- Short-Circuit Current Rating up to 200kA, See table
- 75°C rated connectors, 115A ampacity
- Wire range 2 to 4 AWG CU

### Mechanical

- Panel mount
- 3 pole configuration
- Flammability, UL94 HB

# Terminal Blocks With High Short-Circuit Current Ratings

## NDN63-WH-UL

### Agency/Standards

- UL 1059 Recognized, Guide XCFR2, File E62622
- General Industry Class per UL 1059, usage category C

### Electrical

- 600Vac or dc
- Short-Circuit Current Rating up to 100kA, See table page 16
- 65A ampacity
- Wire range 6 to 18 AWG CU

### Mechanical

- 35mm DIN rail and C-rail mount
- .375" (9.52) pole to pole spacing
- 3 pole configuration
- Marking tape MT12-1/2
- Flammability, UL94 V2

## TB300-03SP-UL

### Double Row Terminal Block

### Agency/Standards

- UL 1059 Recognized, Guide XCFR2, File E62622
- General Industry Class per UL 1059, usage category C

### Electrical

- 600Vac or dc
- Short-Circuit Current Rating up to 100kA, See table page 16
- 30A ampacity
- Wire range 10 to 18 AWG CU

### Mechanical

- Panel mount
- .562" (14.28) pole to pole spacing
- 3 pole configuration
- Flammability, UL94 V0

# Terminal Blocks With High Short-Circuit Current Ratings

- 35mm DIN rail and C-rail mount
- .635" (16.13mm) pole to pole spacing
- 3 pole configuration
- Marking tape MT12-½
- Flammability, UL94 V2

# Application Notes

## Proper Application

When applying Power Distribution Blocks (PDBs) and terminal blocks, there are several requirements that must be satisfied, based upon various UL Standards, the NEC®, and the specific application. Some of the requirements and ratings include: voltage, continuous current, wire range (load and line side), conductor terminal temperature rating, short-circuit current rating or withstand rating (SCCR), type and amp rating of upstream overcurrent protective device (fuse or circuit breaker) and spacing (between uninsulated live part and uninsulated grounded part or uninsulated live parts of opposite polarity). The requirements vary, based on the application for industrial control panels (feeder circuit or branch circuit), field applications, or HVAC applications.

New requirements in the 2005 NEC® for a marked short-circuit current rating (SCCR) on industrial control panels (NEC® 409.110), industrial machinery (NEC® 670.3A), and commercial/industrial HVAC equipment (NEC® 440.4(B)) have resulted in considerable attention being placed upon the proper selection and application of power distribution blocks and terminal blocks. In addition, UL508A Industrial Control Panels has a requirement that the assembly be marked with its short-circuit current rating. Per UL508A, each power circuit component in the panel, such as a PDB, has a SCCR expressed in amperes or kiloamperes and voltage. The SCCR shall be established by either being marked on the product, the instruction sheet provided with it, or from UL508A Supplement SB Table SB4.1. If an assembly short-circuit current rating above 10,000 amperes is desired, a power distribution block or a terminal block with a high short-circuit current rating must normally be utilized.

The following material includes some application notes on power distribution block and terminal block SCCR, UL Listed 1953 vs UL Recognized 1059, spacing requirements, conductor ampacities, conductor termination ratings affecting conductor ratings, and SCCR for multi-lug switches and circuit breakers.

## UL Listed 1953 vs. UL Recognized 1059

Listed products simply require checking to ensure that the product is used in accordance with its listing and labeling. However, for recognized products, such as terminal blocks, the "Conditions of Acceptability" must be investigated to ensure the product is suitable for the specific application, and then the procedure description must be documented in the manufacturer's procedure for the assembly.

Most power distribution blocks available today are actually terminal blocks, and are recognized to UL 1059, the terminal block standard. Terminal blocks may or may not meet the spacing needed for OEM applications. Terminal blocks are marked with a UL recognition mark to ensure that the designer and UL inspector checks, among other things, that

there is adequate spacing for the OEM application in which they are being applied. Power distribution blocks are evaluated to UL1953, the power distribution block outline of investigation and are listed for general installation, which means they have adequate spacing for most OEM and field applications. These power distribution blocks are marked with a listing mark, which means that the inspector does not need to check "conditions of acceptability" as is needed with recognized products. As listed products, PDBs evaluated to UL1953 are suitable for use in the field. For example, an electrical contractor may install them in a metal wireway, something that may not be done with a recognized product such as a terminal block.

## Marking Equipment with SCCR

Marking the equipment with its short-circuit current rating (SCCR) is another important consideration in the proper application of PDBs and terminal blocks. This datasheet provides the details on Cooper Bussmann power distribution blocks and terminal blocks that have high short-circuit current ratings. Using these PDBs and terminal blocks with appropriate overcurrent protective devices makes it easier to achieve a high short-circuit current rating for the entire panel assembly.

## SCCR for Wire Management Products

There are different ways to determine the SCCR for wire management products (power distribution blocks, terminal blocks and multi-lug connectors) per UL508A Supplement SB: (1) Use tested and listed combinations, which consist of a specific part number and a specific type and maximum size overcurrent protective device. For instance, the power distribution blocks in this datasheet are all SCCR tested and listed combinations with fuses. An upstream current-limiting fuse of a specific class and maximum ampere rating as shown in the tables can be used to achieve the SCCR in the tables. Otherwise, the SCCR of the power distribution block will be determined by (2) or (3).

# Application Notes

(2) UL508A has provisions to raise the rating of power distribution blocks by the use of current-limiting overcurrent protective devices such as current-limiting fuses (i.e. class J, T, RK1, etc.) in the feeder portion of the circuit.

(3) If the SCCR rating for a power distribution block, terminal block or multi-lug connector is not established by (1) or (2) above, then the SCCR is the default 10kA per UL508A, Supplement SB, Table SB4.1.

For more in depth application material on SCCR see Industrial Control Panel section of publication SPD or Advanced Guide To Understanding Assembly Short-Circuit Current Rating.

## SCCR for Multi-Lug Connector (Power Distribution Lug) Switch and Circuit Breaker

Switches or circuit breakers with multi-lug connectors for conductor terminations serve a very similar wire management function as power distribution blocks. However, it cannot be assumed that when a multi-lug connector is installed on a circuit breaker or switch, that the SCCR of the multi-lug connector is the same as the interrupting rating of the protective device. Multi-lug connectors are covered under UL Standard 486 A/B. Much like a power distribution block, multi-lug connectors are components for distributing tap conductors to power loads and are not an integral part of the overcurrent protective device operation. Therefore, the multi-lug connector must be evaluated in a short-circuit test with the specific overcurrent protective device and listed with a specific combination SCCR. It is important to note, most switches and circuit breakers are not short-circuit tested with multi-lug connectors. If a multi-lug connector on a circuit breaker or switch does not have a combination SCCR with the specific overcurrent protective device used, then it is to be treated in the same manner as an unmarked power distribution block, which means the SCCR is the default 10kA (UL508A, Supplement SB). To repeat, unless the switch or circuit breaker with a multi-lug connector is specifically marked with a short-circuit current rating, the actual short-circuit current rating is 10,000 amperes (or less, if the interrupting rating of the circuit breaker or fuse is less than 10,000 amperes). The use of a listed and tested combination SCCR will ensure that a higher rating is achieved for the product and aid in achieving a higher overall SCCR for the industrial control panel.

## PDB Spacing Requirements for Equipment:

Depending upon the specific application and the standard to which the equipment is being designed, there are certain PDBs that can meet these spacing requirements, some with a high SCCR. The following details the spacing requirements at 600V based upon the equipment standards.

UL Standard	Spacing between live parts of opposite polarity		Spacing between live parts and grounded parts or enclosure @600V
	Through air @600V	Over surface @600V	
508A Feeder Circuits	1"	2"	1"
508A Branch Circuits	3/8"	1/2"	1/2"
1995 HVAC	3/8"	1/2"	1/2"

Note: Refer to Specific UL standards for complete spacing details.

## Industrial Control Panels (UL508A):

UL508A contains three important requirements to consider when applying power distribution blocks.

- Spacing of 1" through air, 2" over surface (301 to 600V) is required when used in a feeder circuit (that's everything ahead of or on the line side of the final branch circuit overcurrent protective device).
- An assumed short-circuit current rating of 10kA for power distribution and terminal blocks not marked with a higher short-circuit current rating, per UL508A Table SB4.1.
- Conductor ampacity requirements based on conductor terminal temperature ratings and UL508A conductor ampacities

The following details the requirements regarding the use of power distribution blocks in industrial control panels.

## Use of Power Distribution Blocks in Industrial Control Panel Feeder Circuits (600V & below)

- A Listed PDB (UL1953) can be used "as is" since it meets the 2" and 1" spacing requirements for feeder circuits in UL508A section 10.2 (see Table 10.2) & 28.2.4.
- A Recognized Terminal Block (UL1059) can only be used if it meets the spacing requirements in UL508A sections 10.2 (see Table 10.2) & 28.2.1 and it is suitable for field wiring (use Group A, C or D of UL 1059).
  - Use Group A: Service — including dead-front switch boards, panelboards, service equipment, and the like.
  - Use Group B: Commercial appliances, including business equipment, electronic data processing equipment, and the like.
  - Use Group C: Industrial, general.
  - Use Group D: Industrial, devices having limited ratings. Such as where the load on any single circuit of the terminal block does not exceed 15 amperes at 51 to 150 volts, 10 amperes at 151 to 300 volts, 5 amperes at 301 to 600 volts, or the maximum ampere rating, whichever is less.

**Listed PDBs have adequate spacing for feeder circuit applications but most recognized terminal blocks don't have the spacing required for use in feeder circuits**

# Application Notes

## Use of Power Distribution Blocks in Industrial Control Panel Branch Circuits (600V & below)

- A Listed PDB (UL1953) can be used "as is" since it exceeds the spacing requirements for branch circuits in UL508A section 10.2 (see table 10.1) & 28.2.4.
- A Recognized Terminal Block (UL1059) can only be used if it meets the spacing requirements at the required voltage in UL 508A, section 10.2 (see Table 10.1) & 28.2.1 and it is suitable for field wiring (Use Group A, C or D of UL 1059).

**Listed PDBs have adequate spacing for branch circuit applications and most recognized terminal blocks are also adequate for branch circuit applications**

## Power Distribution Block Application Examples – UL 508A

PDB in UL 508A, 480V Feeder Circuit must have spacing of 1" through air and 2" over surface. PDBs listed to UL 1953 meet these spacing requirements. Terminal Blocks recognized to UL 1059 must be verified to have required spacing.

PDB in UL508A, 480V Branch Circuit must have spacing of  $\frac{3}{8}$ " through air and  $\frac{1}{2}$ " over surface. PDBs listed to UL 1953 meet these spacing as well as most terminal blocks recognized to UL 1059.

## Termination Ratings

Important considerations in the electrical and thermal relationship for components in a circuit are the conductor size, material, rated ampacity, conductor insulation temperature rating and the permissible connector device conductor temperature limits.

If a conductor terminates at two devices that have conductor terminations rated at two different temperatures, the conductor ampacity must correlate to the terminal with the lowest temperature rating.

Conductors with higher temperature ratings can be used at their rated ampacities if the terminations of the circuit devices are rated for the higher temperature rated conductor [NEC 110.14(C)(1)(a)(3)]. However, the industry norm is that most devices rated 100A or less, such as blocks, disconnects, controllers and circuit breakers, have 60°C or 75°C rated terminations. For circuits greater than 100A, the norm is 75°C terminations. UL508A has further internal wiring restrictions requiring 90°C insulated conductors, but these conductors are sized based on either 60°C or 75°C allowable ampacities.

Terminations have a temperature rating that must be observed and this has implications on permissible conductor temperature rating and ampacity. Shown below are three common termination ratings and the rules. The conductor ampacity may also have to be derated due to ambient, conduit fill or other reasons.

Terminal Temp Rating	
60°C	60°C, 75°C, 90°C or higher temperature rated conductor can be used, but the ampacity of the conductor must be based as if conductor is rated 60°C.
75°C	75°C, 90°C or higher temperature rated conductor can be used, but the ampacity of the conductor must be based as if conductor is rated 75°C. A 60°C conductor is not permitted to be used.
60°C/75°C	Dual temperature rated termination. Either 60°C conductors at 60°C ampacity or 75°C conductors at 75°C ampacity can be used. If 90°C or higher temperature rated conductor is used, the ampacity of the conductor must be based as if conductor is rated 75°C.

# Application Notes

For more information on this see section Conductor & Terminations – Application Considerations in the Cooper Bussmann publication SPD – Selecting Protective Devices on [www.cooperbussmann.com](http://www.cooperbussmann.com)

**UL 508A Industrial Control Panels Conductors for Internal Wiring:** Copper conductors only. Conductors are sized based on either the 60°C or 75°C allowable conductor ampacities from UL508A, Table 28.1 (following). The 75°C ampacities can only be used if the termination temperature ratings at both ends of the conductor are rated 75°C or 60°C/75°C. In addition, the conductor insulation is required to be 90°C or higher temperature rated even though the ampacity is based on 60°C or 75°C (UL508A, 29.2.1 & 29.6.1(b)).

**UL508A, Table 28.1 (Partial)**

Wire size		60°C (140°F)	75°C (167°F)
AWG	(mm <sup>2</sup> )	Copper	Copper
14	(2.1)	15	15
12	(3.3)	20	20
10	(5.3)	30	30
8	(8.4)	40	50
6	(13.3)	55	65
4	(21.2)	70	85
3	(26.7)	85	100
2	(33.6)	95	115
1	(42.4)	110	130
1/0	(53.5)	—	150
2/0	(67.4)	—	175
3/0	(85.0)	—	200
4/0	(107.2)	—	230
250 kcmil	(127)	—	255
300	(152)	—	285
350	(177)	—	310
400	(203)	—	335
500	(253)	—	380
600	(304)	—	420
700	(355)	—	460
750	(380)	—	475
800	(405)	—	490
900	(456)	—	520
1000	(506)	—	545
1250	(633)	—	590
1500	(760)	—	625
1750	(887)	—	650
2000	(1013)	—	665

**NOTES**

1 For multiple-conductors of the same size (1/0 AWG or larger) at a terminal, the ampacity is equal to the value in this table for that conductor multiplied by the number of conductors that the terminal is able to accommodate.

**HVAC Equipment (UL1995):**

The electrical panel is required to be marked with the assembly SCCR per NEC® 440.4(B). The larger spacing that is mandated in UL508A is not present in UL1995. If the control panel for the HVAC equipment is a listed UL508A panel, then the larger UL508A spacing is required.

**Power Distribution Block Application UL 1995 Example**

PDB in 480V UL 1995 HVAC Equipment must have spacing of 3/8" through air and 1/2" over surface. PDBs listed to UL 1953 meet this spacing as well as most terminal blocks recognized to UL 1059.

# Application Notes

## New 2005 NEC® Requirements For Wireways:

UL1953 listed power distribution blocks are suitable for the new 2005 NEC® requirement in section 376.56(B) for field installation in metal wireways, if they are the enclosed type (Series PDBFS) or open type with cover. UL1953 is explicit in paragraph 1.1 that these devices are used for splicing and tapping conductors in metallic wireways, junction boxes, auxiliary gutters, etc. Listed devices can be field installed; however, recognized devices are not intended for field installation. UL1059 devices are recognized and are terminal blocks, not power distribution blocks. Therefore UL1059 devices are not suitable for field installation and are not suitable for metal wireway applications even if enclosed or with covers. Also, the SCCR rating of a power distribution block installed in a metal wireway shall be equal to or greater than the available short-circuit current at the point of application (NEC® 110-10).

## National Electrical Code®:

376.56(B) Power Distribution Blocks.

"(1) Installation. Power distribution blocks installed in metal wireways shall be listed."

"(4) Live Parts. Power distribution blocks shall not have exposed live parts in the wireway after installation."

When installed in metal wireways, the NEC® now requires a power distribution block that is listed (acceptable to AHJ). It must be an enclosed PDB or equipped with a cover to prevent exposure of live parts. Series PDBFS (enclosed style) and Series PDB with optional covers are UL1953 Power Distribution Blocks and are suitable for metal wireway applications. Terminal blocks, UL1059 recognized devices, are not suitable for this application.

## Power Distribution Block Application Wireway Example

Series PDB (open style) with covers and Series PDBFS (enclosed style) are suitable for installation in metal wireways.
