

3-INPUT VIDEO SUPER IMPOSER WITH 6dB AMPLIFIER

■ GENERAL DESCRIPTION

NJM2266 is 3-input, 1-output video switch with 6dB amplifier. One input is provided with sink chip clamp function, which adjust the DC level of video signal. The other input of transistor open base can make control of luminance signal. This video switch can be connected to TV monitor directly, as it has 6dB amplifier circuit internally. **NJM2266** is a high performance video switch with is operated 4.75V supply voltage.

■ TEST CIRCUIT

■ APPLICATION

Oscillation Prevention

It is much effective to insert LPF (Cutoff Frequency 70 MHz) under light loading conditions ($R_L \gg 1k\Omega$)

■ APPLICATION

This IC requires $1\text{M}\Omega$ resistance between INPUT and GND pin for clamp type input since the minute current causes an unstable pin voltage.

This IC requires $0.1\mu\text{F}$ capacitor between INPUT and GND, $1\text{M}\Omega$ resistance between INPUT and GND for clamp type input at mute mode.
