

# 4 x 50 W class-D digital input power amplifier with I<sup>2</sup>C diagnostics and low voltage operation

Data brief

### **Features**

- Integrated 110 dB D/A conversion
- I<sup>2</sup>S and TDM digital input (3.3/1.8 V)
- Input sampling frequency: 44.1 kHz, 48 kHz, 96 kHz, 192 kHz
- Class-D channels with 93% efficiency
- EMI control for AM compatibility
- EMI compliance evaluated following normative IEC61967-4 and IEC62132-4
- Low radiation function (LRF)
- Idle tones free DAC
- Output lowpass filter included in the feedback allowing lower cost filter components
- Max. output power
  - 4 x 50 W/4 Ω @ 15.2 V, 1 kHz
- High output power capability
  - 28 W/4  $\Omega$  10 % THD, Vd = 14.4 V
- Full I<sup>2</sup>C bus driving (3.3/1.8 V):
  - Channels independent tristate
  - Channel independent soft play/mute
  - I<sup>2</sup>C bus diagnostics, including DC and AC load detection
- Integrated fault protection
- Input and output offset detector
- Clipping detector

- ESD protection
- 6 V operation ("Start Stop" engines compatibility)
- 2 and 1 Ω load driving capability

## Description

FDA801 is a new BCD technology quad BRIDGE class D amplifier, specially intended for automotive applications.

Thanks to the technology used, it is possible to integrate a high performance D/A converter together with powerful MOSFET outputs in class D, to get an outstanding efficiency compared with the standard class AB.

The integrated D/A converter allows to reach outstanding performances (110 dB S/N ratio with 108 dB of dynamic range). The feedback loop includes the output L-C low-pass filter, allowing superior frequency response linearity and lower distortion independently from the inductor and capacitor quality.

FDA801 is fully configurable through I<sup>2</sup>C bus interface and integrates a full diagnostics array specially intended for automotive applications. Thanks to the solutions implemented to contain EMI emissions, the device is intended to be used in the standard single DIN car-radio box together with the tuner.

Moreover FDA801 is able to work with power supply as low as 6 V, thus supporting the most recent low voltage ('start-stop') car-makers specification.

FDA801 General introduction

## 2 General introduction

FDA801 is a fully digital single chip class D amplifier with high immunity to the demodulation filter effects. The high integration level and the on-board signal processing allow excellent audio performance to be achieved.

Thanks to the digital input and to the feedback strategy in the power stage that make the amplifier immune from the output filter components non-linearity, the number and size of the external components are minimized.

A number of features are included to reduce EMI and the fully digital approach provides a strong GSM immunity.

FDA801 includes: digital  $I^2C$  and  $I^2S$  interfaces, internal 24 bits DAC conversion, digital signal processing for interpolation and noise shaping, innovative self-diagnostic functions and automatic detection of wrong load connections or variation of the load, internal PLL for a clock generation.

<sup>1.</sup> Values in inches are converted from mm and rounded to 4 decimal digits.

<sup>2.</sup> Dimensions D1 and E1 do not include mold flash or protrusions. Allowable mold flash or protrusion is "0.25 mm" per side.

<sup>3.</sup> The optional exposed pad is generally coincident with the top or bottom side of the package and not allowed to protrude beyond that surface.
