

DG501

8-Channel Multiplex Switch with Decode

FEATURES

- Break-Before-Make Switching
- Pull-Up Resistors on Inputs
- Bi-Directional Signal Handling

BENEFITS

- Reduced System Cross-Talk
- Easily Interfaced to TTL

APPLICATIONS

- Multiplexing ± 5 V Analog Signals
- Data Acquisition Systems

DESCRIPTION

Designed for applications where single-ended, Break-Before-Make switching action is required, the DG501 is an 8-channel analog multiplexer that is capable of handling bi-directional signals up to ± 5 V. In addition, an "OFF" state can be activated by using a chip enable signal. In the OFF state, this device can block up to 10 V peak-to-peak signals. An on-chip decoder accepts a 3 bit binary word

which enables the selection of any one of the eight analog switches to be turned on individually. Pull-up resistors are provided at each logic input to simplify TTL interface. This device is available in either a 16-pin plastic or ceramic DIP and is available in commercial, C suffix (0 to 70°C), industrial, B suffix (-25 to 85°C) and military, A suffix (-55 to 125°C) temperature ranges.

Logic Levels*

LOW: $V_L = V_{LOW} < 0.6$ V

HIGH: $V_H = V_{HIGH} > 3.5$ V

* Both V+ lines are internally connected, either one or both may be used. V+ common to substrate.

* For supply voltages of 5 V and -20 V
