Sturdy photoelectric sensor made of die-cast zinc alloy

Robust

The enclosure is robust as it is made of die-cast zinc alloy.

VARIETIES

Standard type

RX

Wide variety

Thru-beam type

Diffuse reflective type

Retroreflective type

DC 2-wire type

RX2

Wiring reduced by 1/3

Wiring can be completed by using only two, instead of three wires.

Power supply cost: reduced to 1/30 or less

Current consumption: 1 mA or less
 An additional power supply for the sensors is not required.

Heavy duty type

RX4

Durable against oil

This sensor can be used in a harsh environment.

MAINTENANCE

Test input (emission halt input)

Convenient for operation check before start-up.
 (Excluding **RX2** types)

FUNCTIONS

Automatic interference prevention function **Retroreflective / diffuse reflective types**

Two sensors can be mounted side by side because of the automatic interference prevention function. (Excluding **RX2** types)

There is no problem even if the beam of the adjoining sensor is incident.

ORDER GUIDE

5 m 16.404 ft cable length type

5m 16.404 ft cable length type (standard: 2m 6.562 ft) is also available for **RX** and **RX2** types. (excluding **RX-500G**)
When ordering this type, suffix “-C5” to the model No.
(e.g.) 5 m 16.404 ft cable length type of **RX-M10** is “**RX-M10-C5**”.

Accessories

- **MS-RX-1** (Sensor mounting bracket)
- **MS-RX-2** (Sensor mounting bracket)
- **PT-RX4-1** (Oil resistant protective tube 1 m 3.281 ft long)
- **PT-RX4-2** (Oil resistant protective tube 2 m 6.562 ft long)
- **PT-RX4-4** (Oil resistant protective tube 4 m 13.123 ft long)
- **RF-230** (Reflector)

Conditions for the load

- 1) The load should not be actuated by the leakage current (1 mA; 0.8 mA for receiver of thru-beam type sensor) in the OFF state.
 - 2) The load should be actuated by (supply voltage – 4 V) in the ON state.
 - 3) The current in the ON state should be between 5 to 100 mA DC.
- [In case the current is less than 5 mA, connect a bleeder resistance in parallel to the load (shown in dotted line above) so that a current of 5 mA, or more, flows.]

SENSING CHARACTERISTICS (TYPICAL)

RX-D700

Diffuse reflective type

Sensing field

Correlation between sensing object size and sensing range

As the sensing object size becomes smaller than the standard size (white non-glossy paper 200 × 200 mm 7.874 × 7.874 in), the sensing range shortens, as shown in the left graph.

(For plotting the left graph, the sensitivity has been set such that a 200 × 200 mm 7.874 × 7.874 in white non-glossy paper is just detectable at a distance of 700 mm 27.559 in.)

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Wiring

- The self-diagnosis output does not incorporate a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load.

Mounting

- The tightening torque should be 1.17 N·m or less.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.

PRECAUTIONS FOR PROPER USE

Refer to p.1552~ for general precautions.

RX-RVM5**Glossy object sensing**

- Please take care of the following points when detecting materials having a gloss.
- ① Make L, shown in the diagram, sufficiently long.
- ② Install at an angle of 10 to 30 degrees to the sensing object.

**RX-PRVM3 RX2-PRVM2****Retroreflective type sensor with polarizing filters**

- If a shiny object is covered or wrapped with a transparent film such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it.
- In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (specular) label or wrapping paper

Steps

- Tilt the sensor with respect to the sensing object while fitting.
- Reduce the sensitivity.
- Increase the distance between the sensor and the sensing object.

RX2-□**Wiring**

- Always connect the sensor to the power supply through a load. If the sensor is connected to the power supply directly, the short-circuit protection makes the sensor inoperable. (The output stays in the OFF state and no indicator lights up.) If this happens, connect the sensor to the power supply through a load. Further, note that the sensor will be damaged if the power supply is connected in reverse without a load.

- Do not connect sensors in series (AND circuit).

- The residual voltage of the sensor is 4 V. Before connecting to a relay, be aware of the actuation voltage of the relay. (Not all 12 V relays may be connected as the load.)

**RX4-□****Connection of protective tube connector**

- Connect the junction connector securely as shown below. The tightening torque should be 0.98 N·m or less.
