- Available in SOIC, SSOP and TSSOP packages

Drive Features for ALVC125:

- High Output Drivers: $\pm 24mA$
- Suitable for heavy loads

DESCRIPTION:

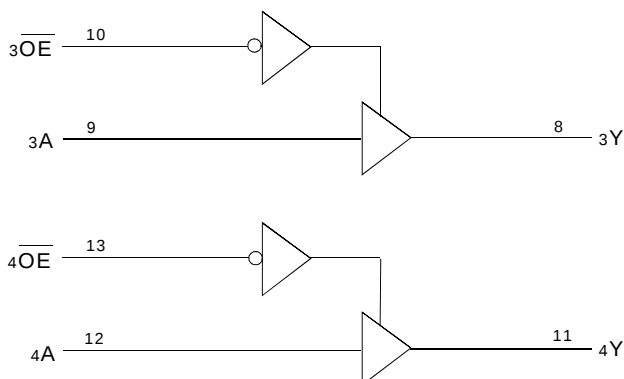

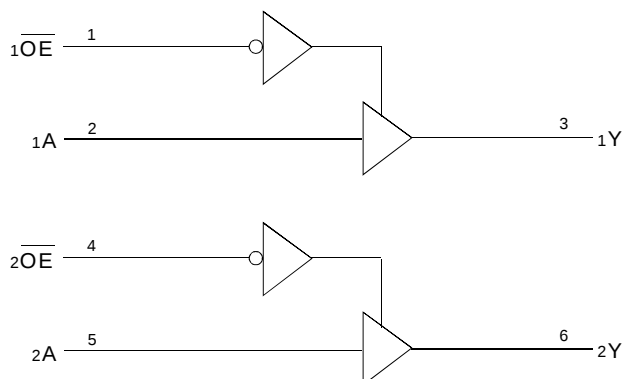

This quadruple bus buffer gate is built using advanced dual metal CMOS technology. The ALVC125 features independent line drivers with 3-state outputs. Each output is disabled when the associated output-enable ($\overline{OE}$) input is high.

The ALVC125 has been designed with a $\pm 24mA$ output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

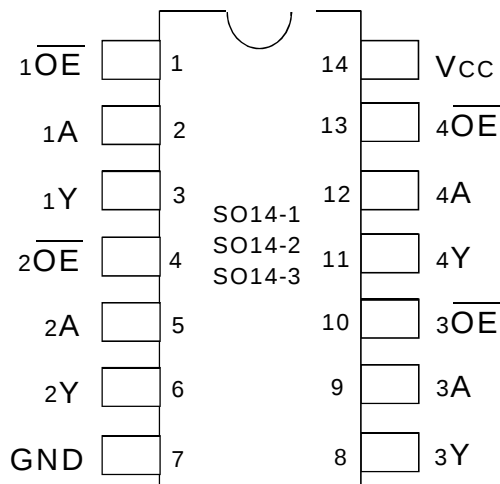

APPLICATIONS:

- 3.3V High Speed Systems
- 3.3V and lower voltage computing systems
