

GPIO Tube Ribbon Cable for Raspberry Pi - 12" long -

ID: 1338

Description

Extra-long and bendy, this is just like your classic Pi GPIO cable but 12" (300mm) long and fitted through a tube so that it's a little more flexible in all directions.

Please note: These cables come with strain-relief clips that make the connector a bit taller than 'classic' GPIO cables. If you want to fit the cable into a Pi enclosure you may need to remove the top clips by cutting them off gently with diagonal cutters/nippers and pulling the plastic off.

Technical Details

- Weight: 29.59g
- Max Dimensions: 323.85mm / 12.75" x 34.92mm / 1.37"
