Digi Connect ® Wi - ME

[Larger View](#)
[3D View](#)

- ? Wireless 802.11b network interface
- ? 1 high -speed TTL serial interface
- ? 4 MB Flash memory, 8 MB RAM
- ? Radio pre -certified in North America, EU and Japan

The Digi Connect Wi -ME is a fully customizable, future -proof and secure 802.11b wireless embedded module built on leading Digi [32 -bit NET+ARM technology](#) . The connector -style module is pin -compatible with the wired [Digi Connect ME ®](#) , and makes fully transparent 802.11b integration possible without the traditional complexities of hardware and software integration work.

Modules with pre -loaded Digi plug -and -play firmware eliminate software development efforts by providing powerful and configurable IPv4/IPv6 device server functionality, including an easy -to -use web user interface and security features.

For custom embedded applications, the IPv6 -ready and royalty -free [NET+OS](#) development kits based on the field -proven ThreadX RTOS offer a complete professional embedded software platform with all integrated building blocks required to create secure network -enabled product designs.
