# Series AS

## In-line Type

Compact size saves space.  
Speed may be accurately controlled even at low speeds.  
Constant speed easily set.  
Retainer prevents an accidental loss of needle.

## In-line Push Locking Type

### Lock speed setting, with the touch of a button

It can be locked only by pushing the handle after adjustment.

### Convenient opening indication scale

The opening indication scale for the needle valve is provided on the handle to facilitate speed adjustments.

### Easy speed control at low flow volume ranges

### Possible to control the mass velocity

### Constant handle constructed of metal to withstand heavy usage

In addition to the standard handle made of resin, a heavy-duty metal handle is also available.

### Retainer prevents an accidental loss of needle

## Elbow Type (Metal Body)

### Minimizes installation time and cost

Fittings and tubing are not necessary because this type screws directly into the actuator. Thus, piping labor and cost can be eliminated.

### Body swivels 360°

Swivel type allows free setting of piping.

### Speed may be accurately controlled even at low speeds.

### Able to control and set a constant speed easily.

### Retainer prevents accidental loss of needle.

# Flow Control Equipment Precautions

Be sure to read before handling. Refer to pages 15-18-3 to 15-18-4 for Safety Instructions and Common Precautions on the products mentioned in this catalog, and refer to main text for more detailed precautions on every series.

## Precautions

### Selection

#### Warning

1. Products mentioned in this catalog are not designed for the use as stop valve with zero air leakage.

A certain amount of leakage is allowed in the product's specifications.

### Mounting

#### Warning

1. Check that the lock nut is tightened.  
A loose lock nut may cause actuator speed changes.
2. Confirm the degree of rotation of the needle valve.  
Products mentioned in this catalog are retainer type so that the needle is not removed completely. Over rotation will cause damage.
3. Do not use tools such as pliers to rotate the handle.  
It can cause idle rotation of the handle or damage.
4. Confirm air flow direction.  
Mounting backwards is dangerous, because the speed adjustment needle will not work and the actuator may lurch suddenly.
5. Adjust needle by opening the needle slowly after having closed it completely.  
Loose needle valves may cause unexpected sudden actuator extension. When needle valve is turned clockwise, it is closed and cylinder speed decreases. When needle valve is turned counter clockwise, it is open and cylinder speed increases.
6. Do not apply excessive force or shock to the body or fittings with an impact tool.  
It can cause damage or air leakage.

## Series AS-F/FE/FG/FM

### Selection

#### Warning

1. Confirm that PTFE can be used in application.

PTFE powder (Polytetrafluoroethylene resin) is included in the seal material. Confirm if the use of it may cause any adverse effect in the system.

### Mounting

#### Warning

1. To install/remove the Flow Control Equipment, tighten/loosen at wrench flat B as close to the thread as possible using the appropriate wrench.

Do not apply torque at other points as the product may be damaged. Rotate Body A manually for positioning after installation.

2. Do not use universal type fittings for applications involving continuous rotation.

The fitting section may be damaged.

### Tightening Torque

#### Caution

1. The tightening torque for pipe fittings is as shown in the table. As a rule, they should be tightened 2 to 3 turns with a tool after first tightening by hand.

Be careful not to cause damage by over-tightening.

Male thread	Suitable screw torque (N·m)	Hexagon width across flats (mm)	Adjustable spanner nominal (mm)
M3	1/4	4.5	—
M5 10/32-UNF	1/6 turn after hand tightening	8	100
1/8	7 to 9	14	150
1/4	12 to 14	17	200
3/8	22 to 24	21	200
1/2	28 to 30	24	200

### Lock Nut Tightening Torque

#### Caution

1. Suitable screw torque for a hexagon lock nut is shown in the table below. For standard installation, turn 15 to 30° using tool, after fastening by hand. Pay attention not to over torque the product.

Body size	Suitable screw torque (N·m)
M3	0.07
M5	0.3
1/8	1
1/4	1.5
3/8	4
1/2	10
