

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

M52342FP

PLL-Split VIF/SIF IC

REJ03F0165-0201

Rev.2.01

Jan 25, 2008

Description

The M52342FP is IF signal-processing IC for VCRs and TVs. It enables the PLL detection system despite size as small as that of conventional quasi-synchronous VIF/SIF detector, IF/RF AGC, SIF limiter, FM detector, QIF AGC and EQ AMP.

Features

- Video detection output is 2 V_{p-p}. It has built-in EQ AMP.
- The package is a 24-pin flat package, suitable for space saving.
- The video detector uses PLL for full synchronous detection circuit. It produces excellent characteristics of DG, DP, 920 kHz beat, and cross color.
- Dynamic AGC realizes high-speed response with only single filter.
- Video IF and sound IF signal processing are separated from each other. VCO output is used to obtain intercarrier. This PLL-SPLIT method and built-in QIF AGC provide good sound sensitivity and reduces buzz.
- As AFT output voltage uses the APC output voltage, VCO coil is not used.
- Audio FM demodulation uses PLL system, so it has wide frequency range with no external parts and no adjustment.

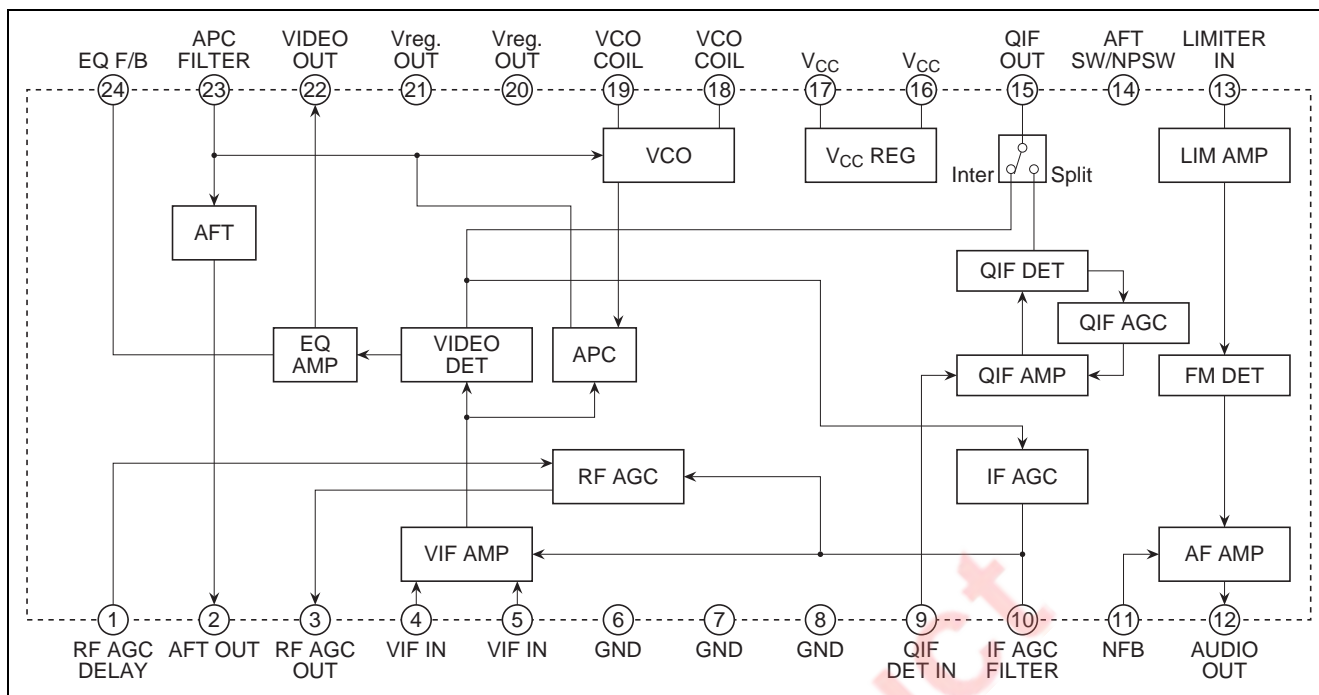

Application

TV sets, VCR tuners

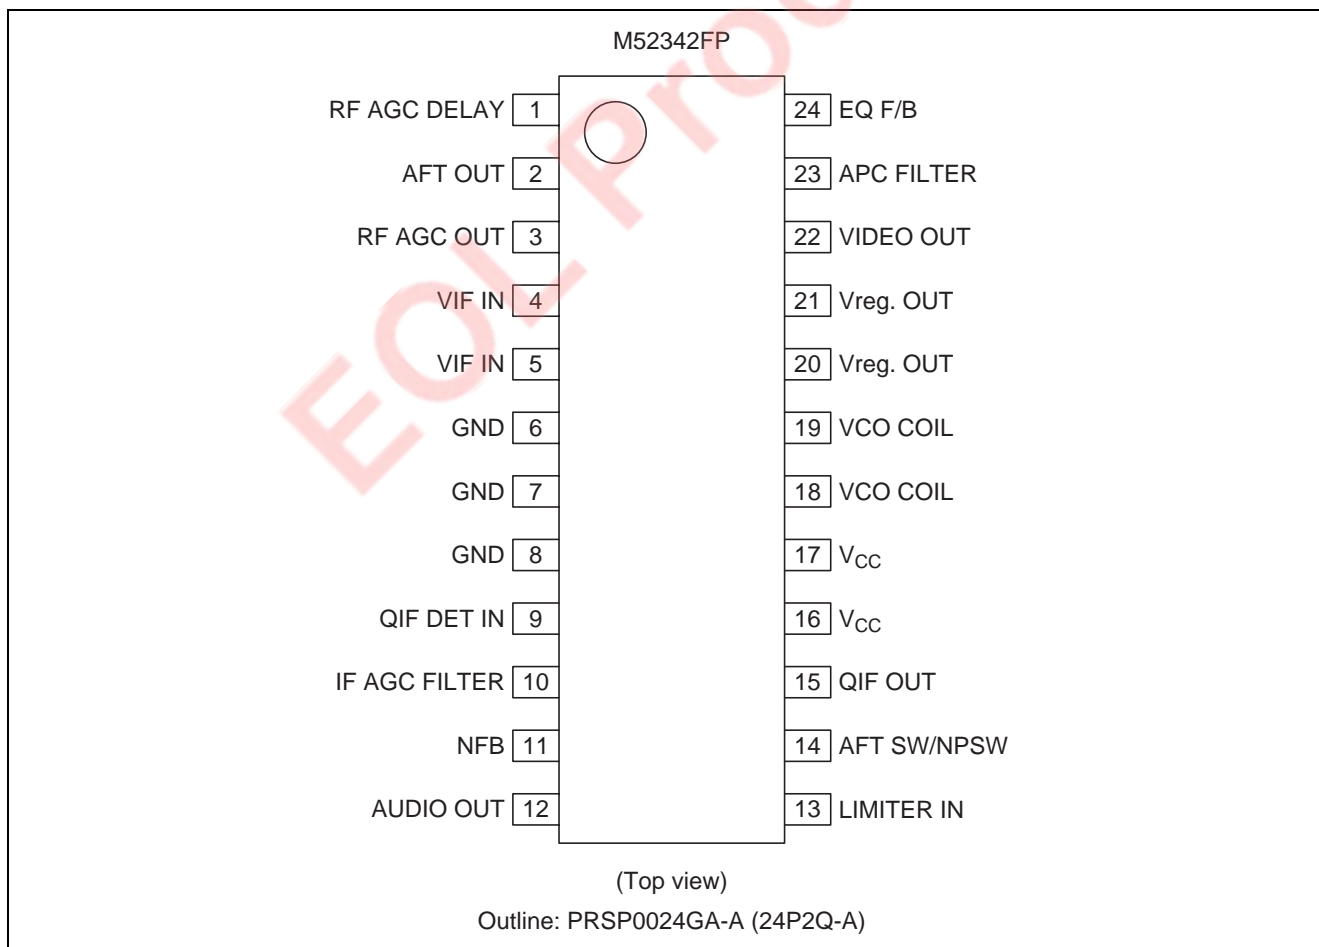

Recommended Operating Condition

- In case of V_{CC} and V_{reg}. OUT short
 - Supply voltage range: 4.75 to 5.25 V
 - Recommended supply voltage: 5.0 V
- Incase of V_{reg}. OUT open
 - Supply voltage range: 8.5 to 12.5 V

Block Diagram

Pin Arrangement

Absolute Maximum Ratings

(Ta = 25°C, surge protection capacitance 200 pF resistance 0 Ω, unless otherwise noted)

| Item | Symbol | Ratings | Unit | Condition |
|-----------------------------|------------------|-------------|------|---|
| Supply voltage ¹ | V _{CC} | 13.2 | V | V _{CC} and Vreg. OUT is not connected to each other. |
| Supply voltage Vreg. OUT | Vreg. OUT | 6.0 | V | V _{CC} and Vreg. OUT is not connected to each other. |
| Power dissipation | Pd | 1524 | mW | |
| Operating temperature | T _{opr} | -20 to +75 | °C | |
| Storage temperature | T _{stg} | -40 to +150 | °C | |
| Surge voltage resistance | Surge | 200 | V | |

Ambient Operating Condition

(Ta = 25°C, unless otherwise noted)

| Supply Voltage | Supply Voltage Range | Recommended Supply Voltage |
|--|----------------------|----------------------------|
| In case of V _{CC} and Vreg. OUT short | 4.75 to 5.25 V | 5.0 V |
| In case of Vreg. OUT open | 8.5 to 12.5 V | |

| | 4.4 to 5.0 | | DEFEAT |

Electrical Characteristics Test Method

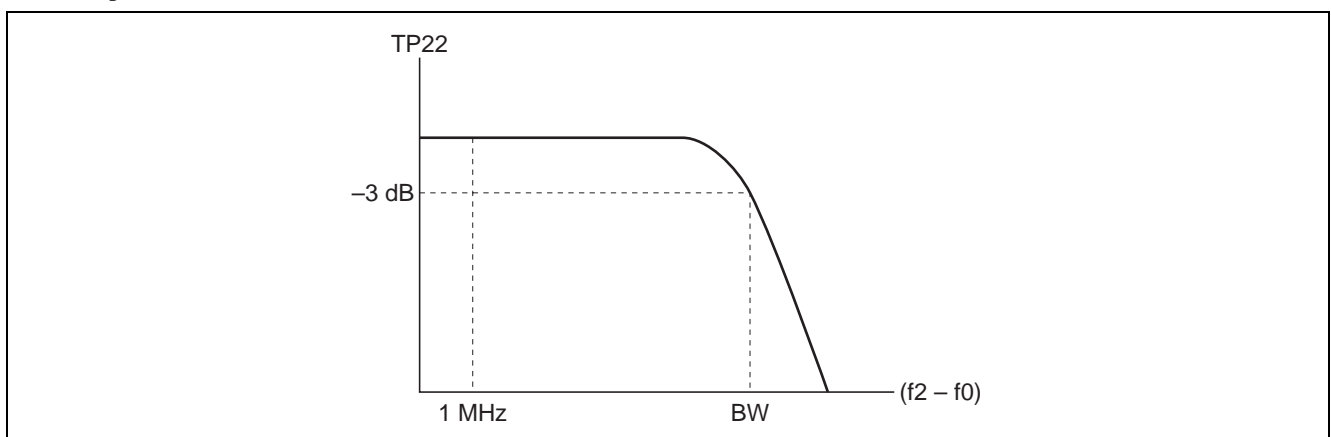

Video S/N

Input SG2 into VIF IN and measure the video out (Pin 22) noise in r.m.s at TP22B through a 5 MHz (−3 dB) L.P.F.

$$S/N = 20 \log \left(\frac{0.7 \cdot V_{o \text{ det}}}{\text{NOISE}} \right) \text{ (dB)}$$

BW Video Band Width

1. Measure the 1 MHz component level of EQ output TP22A with a spectrum analyzer when SG3 (f₂ = 57.75 MHz) is input into VIF IN. At that time, measure the voltage at TP10 with SW10, set to position 2, and then fix V10 at that voltage.
2. Reduce f₂ and measure the value of (f₂ − f₀) when the (f₂ − f₀) component level reaches −3 dB from the 1 MHz component level as shown below.

VIN MIN Input Sensitivity

Input SG4 ($V_i = 90 \text{ dB}\mu$) into VIF IN, and then gradually reduce V_i and measure the input level when the 20 kHz component of EQ output TP22A reaches -3 dB from $V_{O \text{ det}}$ level.

VIN MAX Maximum Allowable Input

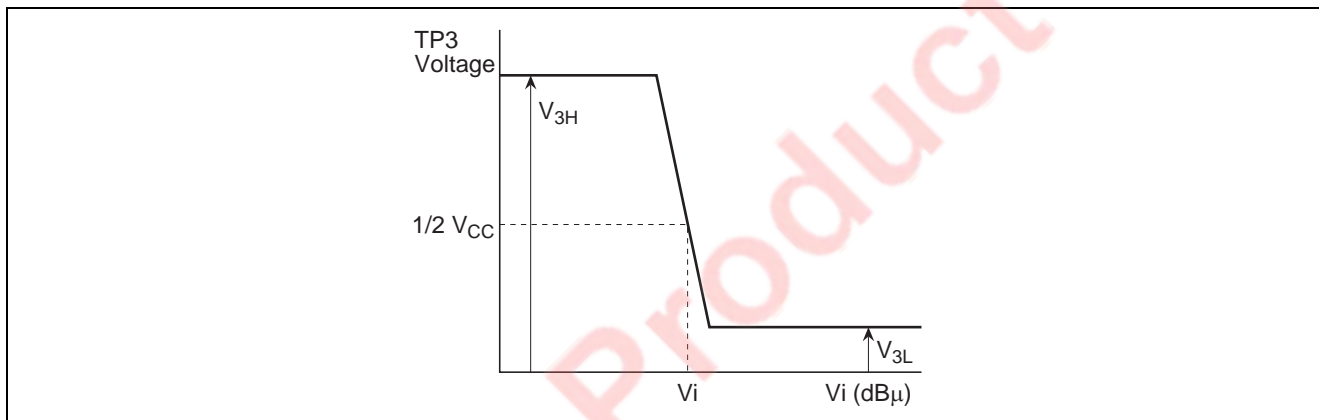

1. Input SG5 ($V_i = 90 \text{ dB}\mu$) into VIF IN, and measure the level of the 20 kHz component of EQ output.
2. Gradually increase the V_i of SG and measure the input level when the output reaches -3 dB .

GR AGC Control Range

$$\text{GR} = \text{VIN MAX} - \text{VIN MIN} (\text{dB})$$

V3 RF AGC Operating Voltage

Input SG8 into VIF IN, and gradually reduce V_i and then measure the input level when RF AGC output TP3 reaches $1/2 V_{CC}$, as shown below.

CL-U Capture Range

1. Increase the frequency of SG9 until the VCO is out of locked-oscillation.
2. Decrease the frequency of SG9 and measure the frequency f_U when the VCO locks.

$$\text{CL-U} = f_U - 58.75 (\text{MHz})$$

CL-L Capture Range

1. Decrease the frequency of SG9 until the VCO is out of locked-oscillation.
2. Increase the frequency of SG9 and measure the frequency f_L when the VCO locks.

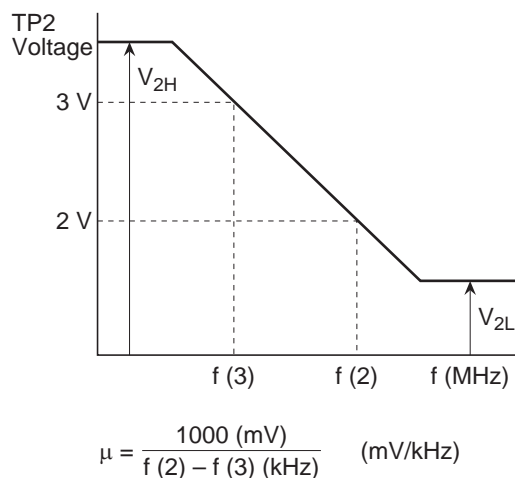

$$\text{CL-L} = 58.75 - f_L (\text{MHz})$$

CL-T Capture Range

$$\text{CL-T} = \text{CL-U} + \text{CL-L} (\text{MHz})$$

μ AFT Sensitivity, V_{2H} Maximum AFT Voltage, V_{2L} Minimum AFT Voltage

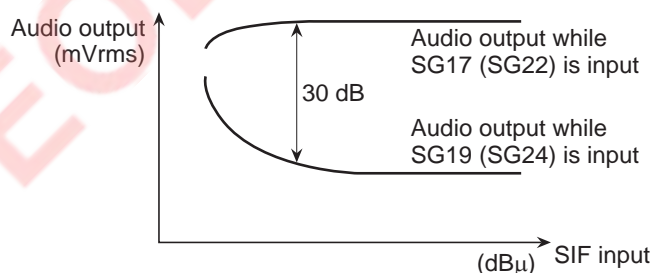

1. Input SG10 into VIF IN, and set the frequency of SG10 so that the voltage of AFT output TP2 is 3 V. This frequency is named $f(3)$.
2. Set the frequency of SG10 so that the AFT output voltage is 2 V. This frequency is named $f(2)$.
3. In the graph, maximum and minimum DC voltage are V_{2H} and V_{2L} , respectively.

**IM Intermodulation**

1. Input SG11 into VIF IN, and measure EQ output TP22A with an oscilloscope.
 2. Adjust AGC filter voltage V10 so that the minimum DC level of the output waveform is 1.0 V.
 3. At this time, measure, TP22A with a spectrum analyzer.
- The intermodulation is defined as a difference between 920 kHz and 3.58 MHz frequency components.

LIM Limiting Sensitivity

1. Input SG17 (SG22) into SIF input, and measure the 400 Hz component level of AF output TP12.
2. Input SG19 (SG24) into SIF input, and measure the 400 Hz component level of AF output TP12.
3. The input limiting sensitivity is defined as the input level when a difference between each 400 Hz components of audio output (TP12) is 30 dB, as shown below.

**AMR AM Rejection**

1. Input SG18 (SG23) into SIF input, and measure the output level of AF output TP12. This level is named VAM.
2. AMR is;

$$\text{AMR} = 20 \log \left(\frac{V_{oAF} \text{ (mVrms)}}{V_{AM} \text{ (mVrms)}} \right) \quad (\text{dB})$$

AF S/N

1. Input SG19 (SG24) into SIF input, and measure the output noise level of AF output TP1. This level is named VN.
2. S/N is;

$$S/N = 20 \log \left(\frac{V_{oAF} \text{ (mVrms)}}{V_N \text{ (mVrms)}} \right) \text{ (dB)}$$

C_{QIF} QIF Control

Lower the voltage of V9, and measure the voltage of V9 when DC voltage of TP15 begins to change.

The Note in The System Setup

M52342FP has 2 power supply pins of V_{CC} (pin 16, 17) and Vreg. OUT (pin 20, 21) . V_{CC} is for AFT output, RF AGC output circuits and 5 V regulated power circuit and Vreg. OUT is for the other circuit blocks.

In case M52342FP is used together with other ICs like VIF operating at more than 5 V, the same supply voltage as that of connected ICs is applied to V_{CC} and Vreg. OUT is opened. The other circuit blocks, connected to Vreg. OUT are powered by internal 5 V regulated power supply.

In case the connecting ICs are operated at 5 V, 5 V is supplied to both V_{CC} and Vreg. OUT.

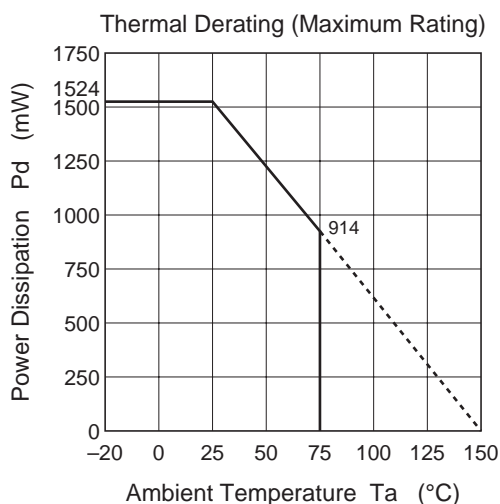

Logic Table

| | | AF | AFT |
|----------|----------|------|--------|
| 10 k "H" | 20 k "H" | NTSC | DEFEAT |
| | 20 k "L" | | NORMAL |
| 10 k "L" | 20 k "H" | PAL | DEFEAT |
| | 20 k "L" | | NORMAL |

| 25 | $f_0 = 5.5$ MHz CW level variable |

Typical Characteristics

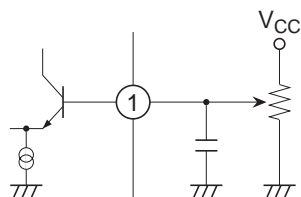

Typical Application Example (for 38.9 MHz Split)

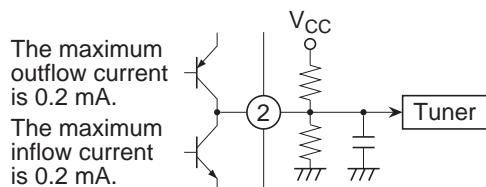

Pin Description

Pin 1 (RF AGC DELAY)

An applied voltage to the pin 1 is for changing a RF AGC delay point.

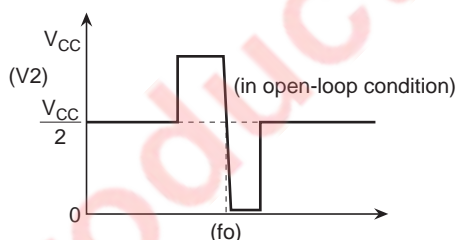

Pin 2 (AFT OUT)

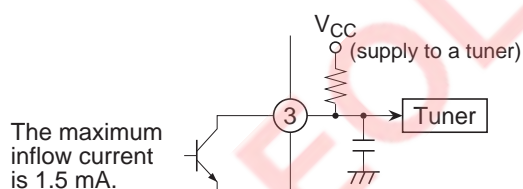

Since an AFT output is provided by a high impedance source, the detection sensitivity can be set by an external resistor.

The muting operation will be on in following two cases;

- 1) the APC is out of locking,
- 2) the video output becomes small enough in a weak electric field.

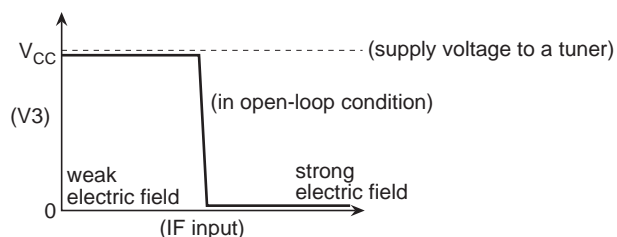

Pin 3 (RF AGC OUT)

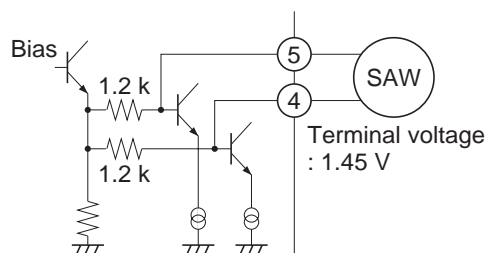

A current mode output is available in the reverse AGC operation.

The fluctuation of a bottom voltage is made small by loading higher impedance for a deep saturation.

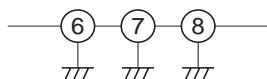

Note: Connecting a nonpolarity capacitor of 1 μ F between pin1 and pin3 improves AGC operating speed. In that case, the capacitors between pin1/pin3 and ground should be removed.

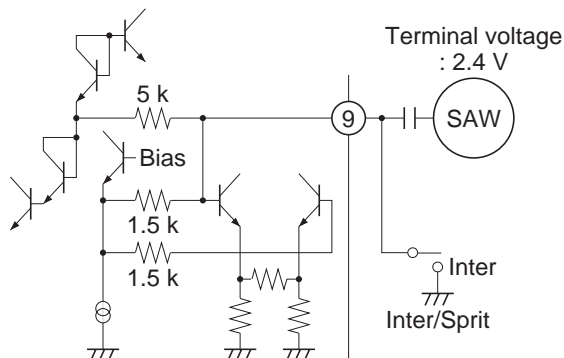

Pin 4, Pin 5 (VIF IN)

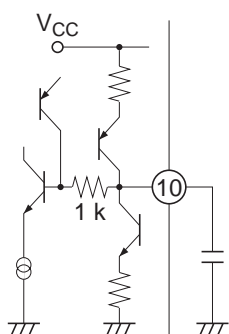

It should be designed considering careful impedance matching with the SAW filter.

Pin 6, Pin 7, Pin 8 (GND)

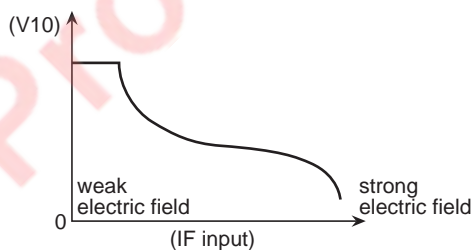

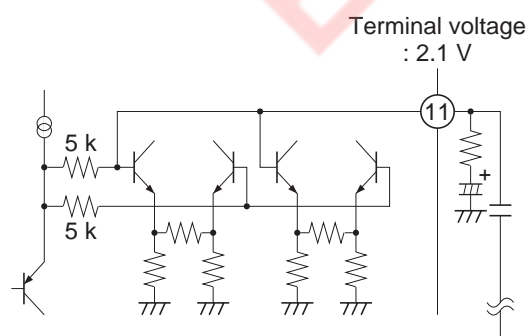

They are all ground pins.

Pin 9 (QIF DET IN)

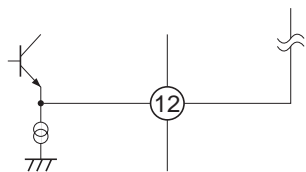

The input impedance is 1.5 kΩ.
In the intercarrier system application, the intercarrier output is available in pin 15 by connecting pin 9 to ground.

Pin 10 (IF AGC FILTER)

In spite of the 1-pin filter configuration, 2-pin filter characteristics are available by utilizing the dynamic AGC circuit.

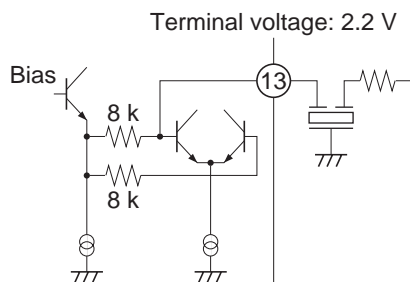

**Pin 11 (NFB)**

The FM detector can respond to several kinds of SIF signals without an adjustment and external components by adopting the PLL technique.
It also is in compliance with the multi-SIF by selecting an appropriate deemphasis and audio output amplifier using the pin 14 switch.
The capacitor between pin 11 and 12, which fixes the deemphasis characteristics, can be determined considering the combination of an equivalent resistance of the IC and this capacitor itself.

Pin 12 (AUDIO OUT)

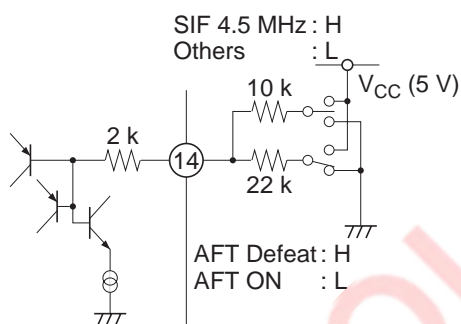

Terminal voltage: 2.2 V

In the 4.5 MHz application, the internal voltage gain is increased by 6-dB in comparison with the other applications and then the signals are delivered through an emitter follower.

Pin 13 (LIMITER IN)

Terminal voltage: 2.2 V

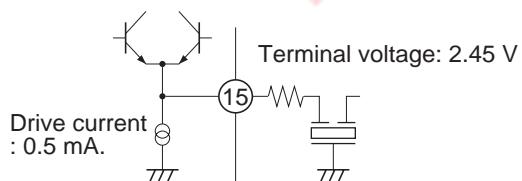

The input impedance is 8 kΩ.

Pin 14 (AFT SW/NPSW)SIF 4.5 MHz : H
Others : LAFT Defeat : H
AFT ON : L

It works as a switch by connecting the resistor to 5 V (High) or GND (Low), alternately.

| 10k | 20k | AF AMP | AFT | Pin 14 Applied Voltage |
|-----|-----|---------|--------|------------------------|
| H | H | 4.5 MHz | Defeat | 4.4 to 5.0 V |
| H | L | 4.5 MHz | Normal | 2.7 to 4.0 V |
| L | H | Other | Defeat | 1.0 to 2.3 V |
| L | L | Other | Normal | 0 to 0.6 V |

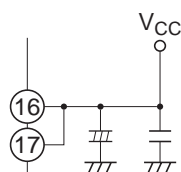

The terminal voltage is set by the external resistors because of an open base input.

Pin 15 (QIF OUT)

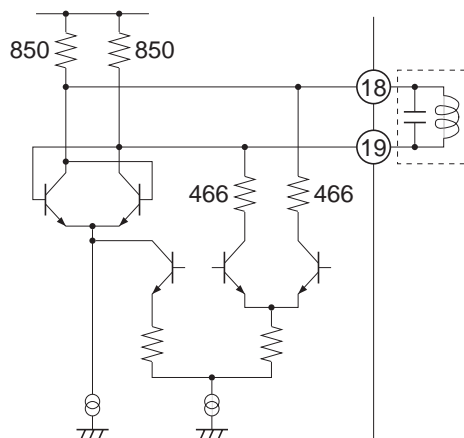

Drive current : 0.5 mA.

Terminal voltage: 2.45 V

In both the split and intercarrier system, the carrier signal to SIF provided from pin 15 through an emitter follower.

Pin 16, Pin 17 (V_{CC})

The recommended supply voltage is 5 V or 9 to 12 V. In the case of 5 V supply, these pins should be tied to pin 20 and pin 21. In the case of 9 to 12 V supply, a regulated output of 5 V are available in pin 20 and pin 21.

Pin 18, Pin 19 (VCO COIL)

Connecting a tuning coil and capacitor to these pins enables an oscillation.

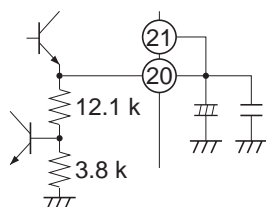

The tuning capacitor of about 30 pF is recommended.

The oscillation frequency is tuned in f_0 .

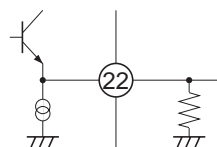

In the actual adjustment, the coil is tuned so that the AFT voltage is reached to $V_{CC}/2$ with f_0 as an input.

The printed pattern around these pins should be designed carefully to prevent an pull-in error of VCO, caused by the leakage interference from the large signal level oscillator to adjacent pins.

The interconnection also should be designed as short as possible.

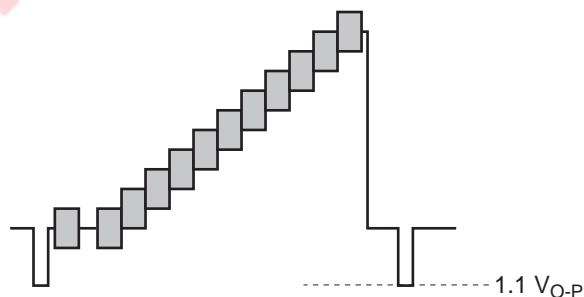

Pin 20, Pin 21 (Vreg. OUT)

It is a regulated 5 V output which has current drive capability of approximately 15 mA.

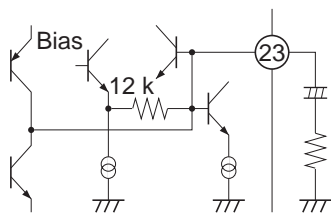

Pin 22 (VIDEO OUT)

Internal driving current: 3 mA

An output amplitude is positive 2 V_{P-P} in the case of 87.5% video modulation.

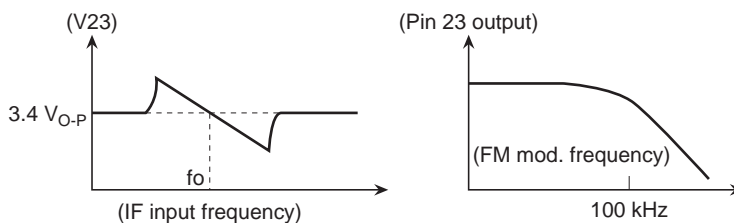

Pin 23 (APC FILTER)

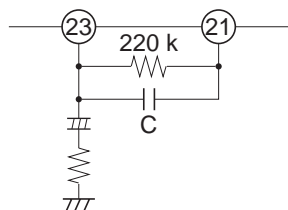

In the locked state, the cut-off frequency of the filter is adjusted effectively by an external resistor so that it will be in the range of around 30 to 200 kHz.

In case the cut-off frequency is lower, the pull-in speed becomes slow. On the other hand, a higher cut-off frequency widens the pull-in range and band width, which results in a degradation in the S/N ratio. So, in the actual TV system design, the appropriate constant should be chosen for getting desirable performance considering above conditions.

In the application, an offset between AFT center frequency and VCO free-running frequency, can be improved by connecting a 220 kΩ resistor to V_{CC} supply (pin 21).

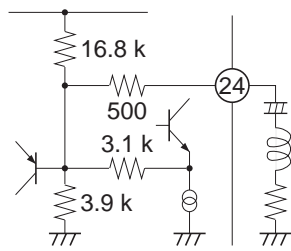

A buzz noise also decreases by connecting a capacitor from pin 23 to V_{CC} (pin 21) or GND. This effect utilizes the signal interference on the printed circuit board. So, the determination that which connection is effective, to V_{CC} or GND, is done by a cut and try method.

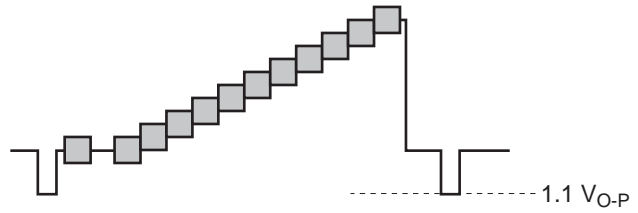

The capacitor of less than 680 pF, which depends on Q of VCO coil, is recommended to prevent an APC pull-in range from narrowing.

Taking it into consideration in the actual TV set design.

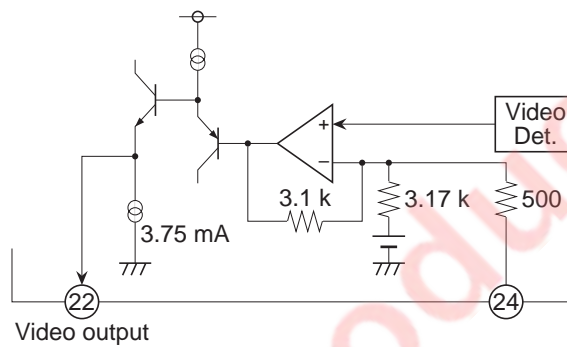

Pin 24 (EQ F/B)

Both the external coil and capacitor determine the frequency response of EQ output.
The series connected resistor is for damping.

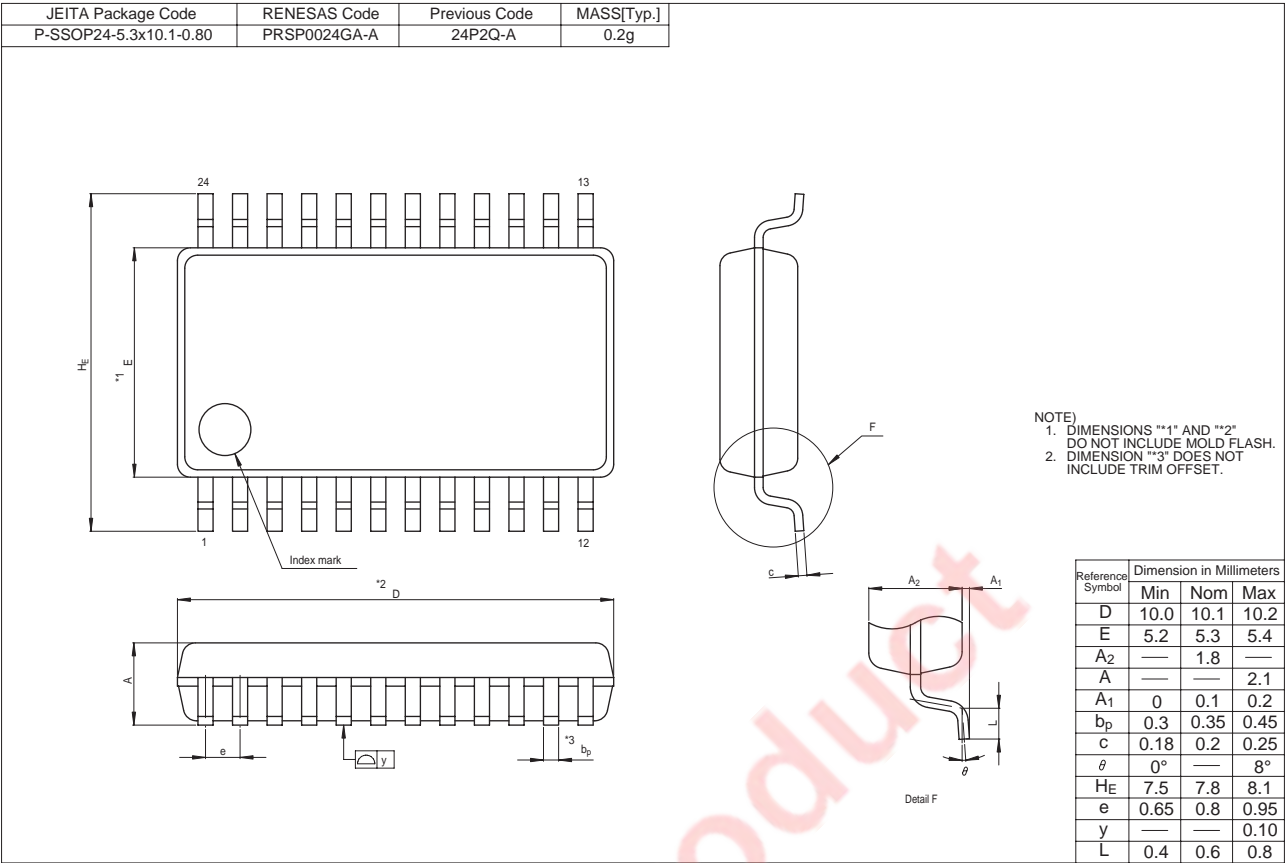

In the intercarrier system, the following phenomenon should be considered;
a strong equalization (EQ) enlarge the sound carrier output from pin 22, because the EQ is applied before an audio trap.
In that case, the next two solutions are recommended;
decrease in S level of SAW, avoiding to peak a sound carrier in EQ.

Circuit Diagram of EQ Amp.

Notes:

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.
2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
 - (1) artificial life support devices or systems
 - (2) surgical implantations
 - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
 - (4) any other purposes that pose a direct threat to human lifeRenesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
