

# FOD3181

## 0.5A Output Current, High Speed MOSFET Gate Driver Optocoupler

### Features

- Guaranteed operating temperature range of -20°C to +85°C
- 0.5A minimum peak output current
- High speed response: 500ns max propagation delay over temperature range
- Wide  $V_{CC}$  operating range: 10V to 20V
- 5000Vrms, 1 minute isolation
- Minimum creepage distance of 7.0mm
- Minimum clearance distance of 7.0mm
- C-UL, UL and VDE\* approved
- 10kV/ $\mu$ s minimum common mode rejection (CMR) at  $V_{CM} = 1,500V$
- $R_{DS(ON)}$  of 1.5 $\Omega$  (typ.) offers lower power dissipation

### Applications

- Plasma Display Panel
- High performance DC/DC convertor
- High performance switch mode power supply
- High performance uninterruptible power supply
- Isolated Power MOSFET gate drive

\*Requires 'V' ordering option

### Description

The FOD3181 is a 0.5A Output Current, High Speed MOSFET Gate Drive Optocoupler. It consists of a gallium aluminum arsenide (AlGaAs) light emitting diode optically coupled to a CMOS integrated circuit with a power stage. The power stage consists of a PMOS pull-up and a NMOS pull-down power transistor. It is ideally suited for high frequency driving of MOSFETs used in Plasma Display Panels (PDPs), motor control invertor applications, and high performance DC/DC converters.

The device is packaged in an 8-pin dual in-line housing compatible with 260°C reflow processes for lead free solder compliance.

### Functional Block Diagram

**Note:**

A 0.1 $\mu$ F bypass capacitor must be connected between pins 5 and 8.

### Package Outlines

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

| Symbol            | Parameter                                               | Value           | Units |
|-------------------|---------------------------------------------------------|-----------------|-------|
| $T_{STG}$         | Storage Temperature                                     | -40 to +125     | °C    |
| $T_{OPR}$         | Operating Temperature                                   | -20 to +85      | °C    |
| $T_J$             | Junction Temperature                                    | -20 to +125     | °C    |
| $T_{SOL}$         | Lead Solder Temperature                                 | 260 for 10 sec. | °C    |
| $I_{F(AVG)}$      | Average Input Current <sup>(1)</sup>                    | 25              | mA    |
| $I_{F(tr)}$       | Minimum Rate of Rise of LED Current                     | 250             | ns    |
| $I_{F(TRAN)}$     | Peak Transient Input Current (<1μs pulse width, 300pps) | 1.0             | A     |
| $V_R$             | Reverse Input Voltage                                   | 5               | V     |
| $I_{OH(PEAK)}$    | “High” Peak Output Current <sup>(2)</sup>               | 1.5             | A     |
| $I_{OL(PEAK)}$    | “Low” Peak Output Current <sup>(2)</sup>                | 1.5             | A     |
| $V_{CC} - V_{EE}$ | Supply Voltage                                          | -0.5 to 25      | V     |
| $V_{O(PEAK)}$     | Output Voltage                                          | 0 to $V_{CC}$   | V     |
| $P_O$             | Output Power Dissipation <sup>(4)</sup>                 | 250             | mW    |
| $P_D$             | Total Power Dissipation <sup>(4)</sup>                  | 300             | mW    |

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to absolute maximum ratings.

| Symbol            | Parameter             | Value      | Units |
|-------------------|-----------------------|------------|-------|
| $V_{CC} - V_{EE}$ | Power Supply          | 10 to 20   | V     |
| $I_{F(ON)}$       | Input Current (ON)    | 12 to 18   | mA    |
| $V_{F(OFF)}$      | Input Voltage (OFF)   | 0 to 0.8   | V     |
| $T_{OPR}$         | Operating Temperature | -20 to +85 | °C    |

**Electrical-Optical Characteristics (DC)** ( $T_A = -20^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$ )

Over recommended operating conditions unless otherwise specified.

| Symbol             | Parameter                                   | Test Conditions                           | Min.           | Typ.* | Max.           | Unit                   |
|--------------------|---------------------------------------------|-------------------------------------------|----------------|-------|----------------|------------------------|
| $I_{OH}$           | High Level Output Current <sup>(2)(3)</sup> | $V_{OH} = (V_{CC} - V_{EE} - 1\text{V})$  | 0.5            |       |                | A                      |
| $I_{OL}$           | Low Level Output Current <sup>(2)(3)</sup>  | $V_{OL} = (V_{CC} - V_{EE} - 1\text{V})$  | 0.5            |       |                | A                      |
| $V_{OH}$           | High Level Output Voltage <sup>(5)(6)</sup> | $I_O = -100\text{mA}$                     | $V_{CC} - 0.5$ |       |                | V                      |
| $V_{OL}$           | Low Level Output Voltage <sup>(5)(6)</sup>  | $I_O = 100\text{mA}$                      |                |       | $V_{EE} + 0.5$ | V                      |
| $I_{CCH}$          | High Level Supply Current                   | Output Open<br>$I_F = 7$ to $10\text{mA}$ |                | 4.8   | 6.0            | mA                     |
| $I_{CCL}$          | Low Level Supply Current                    | Output Open<br>$V_F = 0$ to $0.8\text{V}$ |                | 5.0   | 6.0            | mA                     |
| $I_{FLH}$          | Threshold Input Current Low to High         | $I_O = 0\text{mA}$ , $V_O > 5\text{V}$    |                |       | 10             | mA                     |
| $V_{FHL}$          | Threshold Input Voltage High to Low         | $I_O = 0\text{mA}$ , $V_O < 0.5\text{V}$  | 0.8            |       |                | V                      |

| $V_{ISO}$ | Withstand Isolation Voltage <sup>(11)(12)</sup> | $T_A = 25^{\circ}\text{C}$ , R.H. < 50%,<br>$t = 1\text{min.}$ , $I_{I-O} \leq 20\mu\text{A}$ | 5000 |           |      | $V_{rms}$ |
| $R_{I-O}$ | Resistance (input to output) <sup>(12)</sup>    | $V_{I-O} = 500\text{V}$                                                                       |      | $10^{11}$ |      | $\Omega$  |
| $C_{I-O}$ | Capacitance (input to output)                   | Freq. = $1\text{MHz}$                                                                         |      | 1         |      | pF        |

\* All typical values at  $T_A = 25^{\circ}\text{C}$

**Notes:**

1. Derate linearly above +70°C free air temperature at a rate of 0.3mA/°C.
2. The output currents  $I_{OH}$  and  $I_{OL}$  are specified with a capacitive current limited load =  $(3 \times 0.01\mu F) + 0.5\Omega$ , frequency = 8kHz, 50% DF.
3. The output currents  $I_{OH}$  and  $I_{OL}$  are specified with a capacitive current limited load =  $(3 \times 0.01\mu F) + 40\Omega$ , frequency = 8kHz, 50% DF.
4. No derating required across operating temperature range.
5. In this test,  $V_{OH}$  is measured with a dc load current of 100mA. When driving capacitive load  $V_{OH}$  will approach  $V_{CC}$  as  $I_{OH}$  approaches zero amps.
6. Maximum pulse width = 1ms, maximum duty cycle = 20%.
7.  $t_{PHL}$  propagation delay is measured from the 50% level on the falling edge of the input pulse to the 50% level of the falling edge of the  $V_O$  signal.  $t_{PLH}$  propagation delay is measured from the 50% level on the rising edge of the input pulse to the 50% level of the rising edge of the  $V_O$  signal.
8. Pin 1 and 4 need to be connected to LED common.
9. Common mode transient immunity in the high state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse  $V_{CM}$  to assure that the output will remain in the high state (i.e.  $V_O > 10.0V$ ).
10. Common mode transient immunity in a low state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a low state (i.e.  $V_O < 1.0V$ ).
11. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage > 6000Vrms, 60Hz for 1 second (leakage detection current limit  $I_{L-O} < 5\mu A$ ).
12. Device considered a two-terminal device: pins on input side shorted together and pins on output side shorted together.

## Reflow Profile

- Peak reflow temperature: 260C (package surface temperature)
- Time of temperature higher than 183C for 160 seconds or less
- One time soldering reflow is recommended

## Output Power Derating

The maximum package power dissipation is 295mW. The package is limited to this level to ensure that under normal operating conditions and over extended temperature range that the semiconductor junction temperatures do not exceed 125°C. The package power is composed of three elements; the LED, static operating power of the output IC, and the power dissipated in the output power MOSFET transistors. The power rating of the output IC is 250mW. This power is divided between the static power of the integrated circuit, which is the product of  $I_{DD}$  times the power supply voltage ( $V_{DD} - V_{EE}$ ). The maximum IC static output power is 150mW, ( $V_{DD} - V_{EE}$ ) = 25V,  $I_{DD}$  = 6mA. This maximum condition is valid over the operational temperature range of -40°C to +100°C. Under these maximum operating conditions, the output of the power MOSFET is allowed to dissipate 100mW of power.

The absolute maximum output power dissipation versus ambient temperature is shown in Figure 12. The output driver is capable of supplying 100mW of output power over the temperature range from -40°C to 87°C. The output derates to 90mW at the absolute maximum operating temperature of 100°C.

The output power is the product of the average output current squared times the output transistor's  $R_{DS(ON)}$ :

$$P_{O(AVG)} = I_{O(AVG)}^2 \cdot R_{DS(ON)}$$

The  $I_{O(AVG)}$  is the product of the duty factor times the peak current flowing in the output. The duty factor is the ratio of the 'on' time of the output load current divided by the period of the operating frequency. An  $R_{DS(ON)}$  of 2.0Ω results in an average output load current of 200mA. The load duty factor is a ratio of the average output time of the power MOSFET load circuit and period of the driving frequency.

The maximum permissible, operating frequency is determined by the load supplied to the output at its resulting output pulse width. Figure 13 shows an example of a 0.03μF gate to source capacitance with a series resistance of 40Ω. This reactive load results in a composite average pulse width of 1.5μs. Under this load condition it is not necessary to derate the absolute maximum output current out to 250kHz.

## $I_{OH}$ and $I_{OL}$ Test Conditions

This device is tested and specified when driving a complex reactive load. The load consists of a capacitor in the series with a current limiting resistor. The capacitor represents the gate to source capacitance of a power MOSFET transistor. The test load is a 0.03 $\mu$ F capacitor in series with an 40 $\Omega$  resistor. The LED test frequency is 10.0kHz with a 50% duty cycle. The combined  $I_{OH}$  and  $I_{OL}$  output load current duty factor is 0.6% at the test frequency.

Figure 14 illustrates the relationship of the LED input drive current and the device's output voltage and sourcing and sinking currents. The 0.03 $\mu$ F capacitor load represents the gate to source capacitance of a very large power MOSFET transistor. A single supply voltage of 20V is used in the evaluation.

Figure 15 shows the test schematic to evaluate the output voltage and sourcing and sinking capability of the device. The  $I_{OH}$  and  $I_{OL}$  are measured at the peak of their respective current pulses.

## DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

## ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

## PRODUCT STATUS DEFINITIONS

### Definition of Terms

| Datasheet Identification | Product Status        | Definition                                                                                                                                                                                          |
|--------------------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Advance Information      | Formative / In Design | Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.                                                                       |
| Preliminary              | First Production      | Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design. |
| No Identification Needed | Full Production       | Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.                                               |
| Obsolete                 | Not In Production     | Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.                                                    |
