

TF10BN Chip Current Fuses

Coating color : Black

Construction

Features

- 1005 size miniature and light chip current fuses for the secondary circuit. An occupied area reducible.
- Excellent in mechanical strength.
- The original construction and manufacturing method make the fusing characteristics stable.
- Low power consumption and less voltage dropping possible due to low internal resistance.
- Suitable for over current protection of circuit block in small electronic devices.
- Suitable for both reflow and flow soldering.
- Products meet EU-RoHS requirements.

Derating

• Stationary current

Regard the peak of stationary current waveform as stationary current value when the stationary current is repeated pulse.

• Temperature Derating

Rated current needs to be derated if used at an ambient temperature 70°C or higher. Refer to the derating coefficient on the right figure.

Precautions for Use

- The substrate material of TF10BN applies ceramics to achieve good fusing characteristics. Please keep away from oxygen gas/liquid because such environment may deteriorate element strength and the performance by glass component corrosion.
- When you select fuse product, please make sure to confirm "Precautions for Use of Fusing Components" in this catalogue and ask KOA sales.
