SDLS043 - DECEMBER 1983 - REVISED MARCH 1988

- D-C Triggered from Active-High or Active-Low Gated Logic Inputs
- Retriggerable for Very Long Output Pulses, Up to 100% Duty Cycle
- Overriding Clear Terminates Output Pulse
- '122 and 'LS122 Have Internal Timing Resistors

description

These d-c triggered multivibrators feature output pulse-duration control by three methods. The basic pulse time is programmed by selection of external resistance and capacitance values (see typical application data). The '122 and 'LS122 have internal timing resistors that allow the circuits to be used with only an external capacitor, if so desired. Once triggered, the basic pulse duration may be extended by retriggering the gated low-level-active (A) or high-level-active (B) inputs, or be reduced by use of the overriding clear. Figure 1 illustrates pulse control by retriggering and early clear.

The 'LS122 and 'LS123 are provided enough Schmitt hysteresis to ensure jitter-free triggering from the B input with transition rates as slow as 0.1 millivolt per nanosecond.

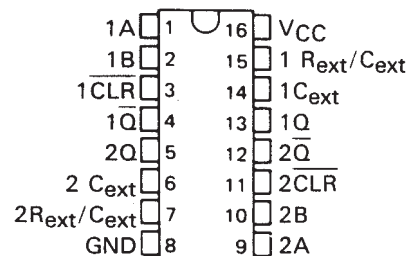

The R_{int} is nominally 10 k Ω for '122 and 'LS122.

(TOP VIEW) (SEE NOTES 1 THRU 4)

- NOTES: 1. An external timing capacitor may be connected between C_{ext} and R_{ext}/C_{ext} (positive).
2. To use the internal timing resistor of '122 or 'LS122, connect R_{int} to VCC.
3. For improved pulse duration accuracy and repeatability, connect an external resistor between R_{ext}/C_{ext} and VCC with R_{int} open-circuited.
4. To obtain variable pulse durations, connect an external variable resistance between R_{int} or R_{ext}/C_{ext} and VCC.

SN54122, SN54123, SN54130, SN74122, SN74123, SN74130 RETRIGGERABLE MONOSTABLE MULTIVIBRATORS

SDLS043 – DECEMBER 1983 – REVISED MARCH 1988

TYPICAL APPLICATION DATA FOR '122, '123, '130

For pulse durations when $C_{ext} \leq 1000$ pF, see Figure 4.

The output pulse duration is primarily a function of the external capacitor and resistor. For $C_{ext} > 1000$ pF, the output pulse duration (t_W) is defined as:

$$t_W = K \cdot R_T \cdot C_{ext} \left(1 + \frac{0.7}{R_T} \right)$$

where

K is 0.32 for '122, 0.28 for '123 and '130

R_T is in $k\Omega$ (internal or external timing resistance.)

C_{ext} is in pF

t_W is in ns

To prevent reverse voltage across C_{ext} , it is recommended that the method shown in Figure 2 be employed when using electrolytic capacitors and in applications utilizing the clear function. In all applications using the diode, the pulse duration is:

$$t_W = K_D \cdot R_T \cdot C_{ext} \left(1 + \frac{0.7}{R_T} \right)$$

K_D is 0.28 for '122, 0.25 for '123 and '130

TIMING COMPONENT CONNECTIONS WHEN
 $C_{ext} > 1000$ pF AND CLEAR IS USED

FIGURE 2

Applications requiring more precise pulse durations (up to 28 seconds) and not requiring the clear feature can best be satisfied with the '121.

TYPICAL OUTPUT PULSE DURATION
vs
EXTERNAL TIMING CAPACITANCE

FIGURE 4

†These values of resistance exceed the maximum recommended for use over the full temperature range of the SN54' circuits.

SN54LS122, SN54LS123, SN74LS122, SN74LS123 RETRIGGERABLE MONOSTABLE MULTIVIBRATORS

SDLS043 – DECEMBER 1983 – REVISED MARCH 1988

TYPICAL APPLICATION DATA FOR 'LS122, 'LS123

The basic output pulse duration is essentially determined by the values of external capacitance and timing resistance. For pulse durations when $C_{ext} \leq 1000$ pF, use Figure 6, or use Figure 7 where the pulse duration may be defined as:

$$t_w = K \cdot R_T \cdot C_{ext}$$

When $C_{ext} \geq 1 \mu F$, the output pulse width is defined as:

$$t_w = 0.33 \cdot R_T \cdot C_{ext}$$

For the above two equations, as applicable;

K is multiplier factor, see Figure 7

R_T is in $k\Omega$ (internal or external timing resistance)

C_{ext} is in pF

t_w is in ns

For maximum noise immunity, system ground should be applied to the C_{ext} node, even though the C_{ext} node is already tied to the ground lead internally. Due to the timing scheme used by the 'LS122 and 'LS123, a switching diode is not required to prevent reverse biasing when using electrolytic capacitors.

TIMING COMPONENT CONNECTIONS

FIGURE 5

'LS122, 'LS123 TYPICAL OUTPUT PULSE DURATION vs EXTERNAL TIMING CAPACITANCE

† This value of resistance exceeds the maximum recommended for use over the full temperature range of the SN54LS circuits.
