APPLICATION NOTES

The PSMF Series are TVS arrays designed to protect I/O or data lines from the damaging effects of ESD (> 25kv) or EFT. This product provides unidirectional protection, with a surge capability of 200 Watts P_{pp} per line for an 8/20 μ s waveform.

UNIDIRECTIONAL COMMON MODE CONFIGURATION (Figure 1)

The PSMF Series provides up to four (4) lines of protection in a common mode configuration as depicted in Figure 1. Circuit connectivity is as follows:

- " I/O 1 is connected to Pin 1.
- " I/O 2 is connected to Pin 3.
- " I/O 3 is connected to Pin 4.
- " I/O 4 is connected to Pin 5.
- Pin 2 is connected to ground.

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- " The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- " Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
