

Hot Melt Adhesive Systems

For strength, speed, choice and convenience
Stick with it

Why 3M™ Jet-melt™ Hot Melt adhesives?

The 3M Jet-melt Adhesive Bonding Systems have been specifically developed to provide a versatile and convenient method of joining a wide range of substrates used in manufacturing.

Jet-melt Adhesives are solvent-free thermoplastic resins that become liquid when heated.

They are applied in their molten state and, upon cooling, immediately form a strong bond to most surfaces including wood, plastic, foam, fabric, expanded polystyrene foam and cardboard.

3M Continuous Innovation

Traditional Hot Melts are applied at approximately 210°C. This can cause problems on materials with low heat resistance and increases the risk of operator burns. Continuous product development has

resulted in the introduction of the Jet-melt Low Melt adhesives range. Being applied at 130°C these adhesives minimise the mentioned disadvantages, but still have similar performance as the standard Hot Melt versions. Smell and fuming is reduced at the same time.

Standard Hot Melt adhesive

3M Low Melt adhesive

3M Jet-melt Application Equipment

3M believes that robust, reliable and easy to use Hot Melt application equipment is key to achieving high productivity, high quality and long term satisfaction of operators. For these reasons 3M has concentrated on offering the ideal range of applicators to meet your application and production needs.

3M Polygun™ EC Applicator

Our newest and most versatile applicator, which is likely to meet the requirements of most customers, is the Polygun EC. This gun provides multiple application temperatures to dispense the adhesive at the optimum temperature.

Adhesive throughput 50 gms/min.
Weight: 860 gms. Output 380 watts.
30 gms of Quadrack stick gives 7.1 m bead.
Temperature range adjustable from 130°C up to 232°C with pre-set temperature module kits that insert into the handle.

Positive adhesive shut off system eliminates excessive dripping so common in ball-check valve designs.

Special Quadrack adhesive shape assures positive adhesive feed for maximum throughput.

Adjustable backstop allows predetermined shot sizes.

Ergonomically designed palm trigger reduces operator fatigue.

Compact, light-weight and rugged - weighing only 860 gr.

Vented double wall construction dissipates heat away from handle for user comfort.

Unique heat block design. 380 watt heating system ensures maximum throughput.

Temperature range adjustable from 130°C up to 232°C with pre-set temperature module kits that insert into the handle.

3M Jet-melt Polygun LT Low Melt Applicator

Use of a palm trigger reduces operator fatigue where longer beads are required.

Adhesive throughput 36 gms/min.
Weight: 370 gms. Output 150 watts.
30 gms Quadtrack Low Melt adhesive stick gives 7,1 metre bead.
Adhesive temperature = 130°C.

Available as **Jet-melt TC Quadtrack™ Applicator** for applying Hot Melt adhesives at = 210°C.

3M Jet-melt II Air-Powered Applicator

This air powered gun has the highest output of the range. Used where long beads or large volumes of adhesive are required, a high capacity adhesive slug magazine feeder is available. Additionally the gun can be semi-automated when bench mounted and used in conjunction with a foot pedal.

Adhesive throughput 60 gms/min.
Weight: 1500 gms. Output 500 watts.
Operates at 80 psi (5.5 bars).
Uses 37 gm adhesive slugs, this gives a 9,8 metre bead. (not suitable for Low Melt adhesives).

3M Jet-melt Touch Control Applicator

The Jet-melt TC gun is recommended for intricate work such as dot and spot applications often found in the electronics industry.

Adhesive throughput 36 gms/min.
Weight: 330 gms. Output 150 watts.
Various nozzles available, easy reload.
8 gm mini stick gives 2,1 metre bead. (not suitable for Low Melt adhesives).

Equipment segmentation

Application Size	Application Speed		
	Slow	Medium	Fast
Small	TC	TCQ/LT	EC
Medium	TCQ/LT	EC	JMII
Large	EC	JMII	JMII

TC = Touch Control Applicator
TCQ = TC Quadtrack Applicator
LT = Polygun LT Applicator
EC = Polygun EC Applicator
JMII = Jet-melt II Applicator

3M Jet-melt Systems in the woodworking and furniture industries

Rapid handling and high bond strength has meant that 3M Jet-melt adhesives are widely chosen for wood bonding. Jet-melt 3738 adhesive was designed specifically for this application. Development of our wood bonding Jet-melt adhesives has meant the introduction of 3778LM Low Melt and 3747 adhesive - a higher performance version of 3738 adhesive.

3M Jet-melt Systems for general purpose/fancy goods assembly

3M Jet-melt 3792 adhesive is a general purpose clear adhesive used for a whole array of applications including the manufacturing of toys, Christmas decorations, point of sale displays and window blinds. The product is popular in the soft furnishing industry for piping, welting and fringe applications. The introduction of 3M Jet-melt Quadtrack 3792LM Low Melt adhesive now means that more delicate materials can be bonded without fear of distortion or discolouration.

3M Jet-melt Systems in packaging

The need for high initial grab, quick setting adhesives in packaging has made Jet-melt adhesives popular in this market. The high instant tack of Jet-melt 3762 adhesive has ensured rapid and efficient carton sealing. The new Jet-melt Quadtrack 3762LM Low Melt adhesive offers even higher levels of instant tack and improves worker safety and conditions. The new all-electric Polygun EC applicator gives levels of adhesive output normally associated with air powered guns - offering much greater flexibility within the packaging area.

3M Jet-melt Systems for plastic bonding

3M Jet-melt 3764 adhesive has always been a popular product for rigid plastic bonding. The introduction of Jet-melt Quadtrack 3789 adhesive has now completed the range with a product specifically designed for flexible plastics with a high plasticiser content. Using the Polygun EC applicator the adhesive is applied at the optimum temperature to ensure excellent bonding characteristics.

3M Jet-melt Systems for the electronics industry

Much of 3M's research and development efforts have focused upon introducing products to provide for the needs of this market.

The 3M range of polyamide adhesives, 3779 and 3789 are popular for potting and encapsulating where high temperature resistance and stability of performance under wide-ranging conditions are essential.

3M has also developed 3M Jet-melt 3748 adhesive for excellent thermal shock resistance. Jet-melt 3748 adhesive can in many cases replace polyamides where high heat resistance is not required. This product represents significant cost savings to electronics producers.

Physical Properties

Jet-melt Adhesive	Features/application ideas:	Colour	Available for (a)	Heat Resistance (b)	Viscosity (c)		Tensile Strength at 22°C		Shear on Douglas Fir at 22°C (d)	Impact Resist. (inch Lbs.)		Peel Strength at 22°C (e)		Delivery rate (secs) (f)	EC Temp. Control Setting		
					at 190°C		at 230°C			PSI		PSI				N/cm	
LOW MELT TECHNOLOGY: Applied at only 130°C, these Jet-melt "LM" adhesives can bond many heat sensitive substrates such as polystyrene foam.																	
3762LM	Improved "hot-tack" when dispensed at low melt temperature. Can bond expanded polystyrene, corrugated packaging, displays	light tan	LT EC	55°C	(4000 @ 121°C)		4.1	600	3.3	480	1.1 (10)	1.4 (13)	10	6	45	1	
3778LM	Can bond many wood and wood-like products, as well as many plastics	light tan	LT EC	55°C	(7000 @ 121°C)		2.1	300	3.0	435	1.1 (10)	1.5 (14)	14	10.5	62	1	
3792LM	Long bonding range when dispensed at low melt temperature. Can bond woods, P.O.S. displays, corrugated packaging, polyolefins, and other lightweight materials.	clear	LT EC	60°C	(10500 @ 121°C)		3.8	547	2.4	350	1.2 (11)	7.0 (64)	22	13	57	1	
HOT MELT TECHNOLOGY																	
3738	High delivery and long bonding range. General purpose for foundry sand cores, exhibits, wood bonding, corrugated, and chipboard.	medium tan	TC TOO EC JMI	55°C	2875	1200	2.5	360	2.58	375	1.4 (13)	4.0 (36)	23	13	35	4	
3747	General purpose including plastic and wood. Good heat resistance and flexibility. Medium performance. Can bond light gauge metal.	light amber	TC TOO EC JMI	65°C	4100	2400	5.2	750	2.96	430	1.3 (11)	2.8 (25)	35	20	45	4	
3748	Good thermal and electrical properties. Non-corrosive to copper. Can bond polypropylene, polyethylene.	off white	TC TOO EC JMI	80°C	5000	2400	2.6	375	1.7	250	1.3 (11)	2.6 (24)	31	18	65	4	
3748V-O	Self-extinguishing version of 3748 adhesive meets UL 94 V-O, UL 1410 requirements. Can bond FRP epoxy board, polypropylene.	pale yellow	TCO EC	80°C	5500	2700	1.4	200	1.89	275	1.1 (10)	5.5 (50)	26	15	65	4	
3762	Excellent "hot-tack", fast-setting for corrugated packaging, hospitalisation, repacking area, warehouse. Low cost, general purpose. Can bond chipboard, wood.	medium tan	TC TOO EC JMI	55°C	1870	750	3.1	450	3.75	545	1.3 (11)	2.2 (20)	12	7	30	3	
3764	Can bond many plastics. Good impact resistance at low temperature. Can bond ABS, polycarbonate, rigid PVC, polypropylene, polyethylene.	clear	TC TOO EC JMI	60°C	6000	4250	4.5	650	2.69	390	1.5 (14)	6.4 (58)	25	14	55	4	
3779	Good electrical properties with high heat resistance for potting, wire staking, UL 94 V-O. Good fuel and oil resistance.	translucent, light amber	TC TOO EC JMI	150°C	7000	2000	14.5	2100	4.82	700	1.2 (11)	2.4 (22)	32	18	75	5	
3789	High performance for plastic. Impact resistant. Also can bond wood, vinyl, ABS, FRP.	translucent, amber	TCO EC JMI	105°C	5200	1400	3.6	520	3.9	570	1.5 (14)	4.25 (40)	28	16	70	5	
3792	Clear multi-purpose product for wood, corrugated packaging, lightweight substrates, furniture, upholstery, novelties. Can bond fabric and other lightweight materials.	clear	TC TOO EC JMI	60°C	5000	2200	2.8	400	1.7	250	1.4 (13)	4.6 (42)	23	13	45	4	
3796	Multi-purpose with heat resistance. High performance for plastics and light gauge metals.	tan	TC JMI	100°C	37750	7500	2.5	383	3.6	550	1.4 (13)	3.3 (29)	51	29	100	-	

d) Overlap shear strength was measured on 25 x 100 mm specimens overlapped 25 mm. The specimens were tested at room temperature, pulled at 50 mm/min.

e) Peel strength was measured on 25 x 200 mm canvas duck specimens pulled in peel at 250 mm/min. 3748 peel strength measured on high density polypropylene - canvas test not applicable.

f) 26 x 75 mm "Jet-melt" cartridge with Jet-melt II Air-Powered Applicator. Time taken to extrude 1 cartridge in seconds.

TC = Touch Control Applicator (15 x 48 mm mini sticks)

TCO = TC Quickdraw Applicator (15 x 200 mm Quickdraw shaped Hot Melt sticks)

LT = Polygun LT Applicator (15 x 200 mm Quickdraw shaped Low Melt sticks)

EC = Polygun EC Applicator (15 x 200 mm Quickdraw shaped sticks, Low Melt + Hot Melt)

JMI = Jet-melt II Applicator (26 x 75 mm slugs)

a) Highest temp with strength 25 mm QLS Douglas Fir 2 PSI (13.79 MPa) dead load; temp is raised 5.5°C every 30 mins. Temp recorded is last baseline temp with strength.

b) Brookfield Thermoseal viscosity in mPa.s (c.p.s.)

Our recommendations on the use of our products are based on tests believed to be reliable, but we would ask that you conduct your own tests to determine their suitability for your applications. This is because 3M cannot accept any responsibility or liability, direct or consequential, for the loss or damage caused as a result of our recommendations.
