> Code Reader p.10

**Diverse**Lineup

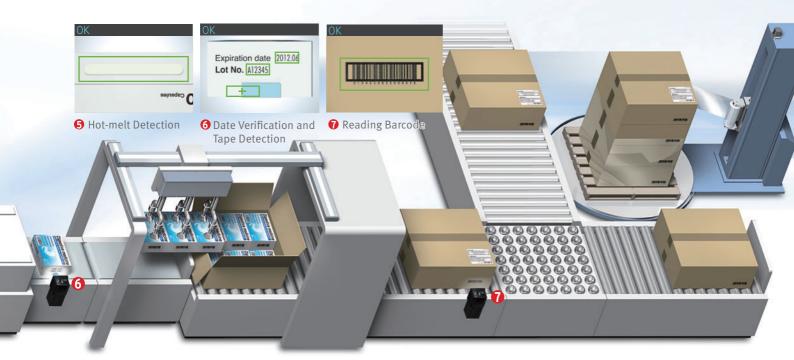

#### A Lineup That Fits a Wide Range of Equipment

Expanded inspection menu, camera variations, and communication interfaces with the same pricing level as our previous FQ Series.

With a wide range of sensors, an option for every application now becomes a standard option.

» p.12

# Compact

# All You Need is One

# All You Need in One Package

#### **Image Processor**

Although previous Vision Sensors placed the image processor in a separate Controller, now we have built the processor into the camera unit.

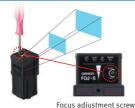

#### High-power Lighting

The Sensor includes high-power lighting capable of evenly lighting across a wide field of view.

This provides sufficient lighting even when the enclosed polarizing filter is used.

#### Adjustable lens

The focus of the lens can be adjusted to take clear images for the specific field of view and installation distance you need.

#### I/O Power Supply Connector

The external output line for inspection results, the input line for changing the setup, and the power supply line are all combined into one connector.

#### **Ethernet Connector**

Commands can be input from a PLC to control the FQ2, and inspection results and measurement results can be output from the FQ2 to a PLC.

You can also transfer images to a computer.

#### **IP67 Water Resistance**

The sensor can be used in wet

#### Flexible Cables

All cables from the camera are flexible. This allows the Sensor to be used safel on moving parts.

#### Smart Click Connectors

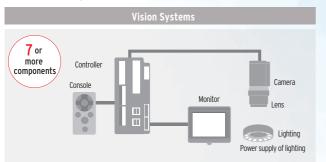

Connection is made quick and easy with a clear, definitive click-into-place mechanism.

# Quick and Easy Design and Installation

#### **Easy Product Selection**

All you need to do is select the camera based on the field of view and installation distance that you require. There is no need to select and purchase additional lighting or lenses. Furthermore, the time required to wire everything has been drastically reduced due to the low number of components.

#### **Easy Installation**

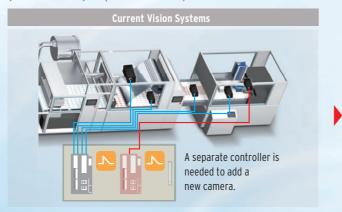

The camera and lighting have been integrated into a single unit, so only one camera mounting bracket is required. The Sensor comes with a multi-directional mounting bracket that can be attached on any of the four sides of the Camera. Axis alignment is also not required because the lighting and the camera are integrated into a single unit.

#### Easy Expansion Up to 32 Cameras

Just install the Cameras where you need them. No control panels are required to house the controllers. Triggers can be input for each Camera, so new Cameras can be added whenever required without having to worry about timing input design. Up to 32 Cameras can be set up from a single Touch Finder, so you do not need to worry about adding new monitors when you need more Cameras. This also allows you to smoothly respond to user requests for additional features.

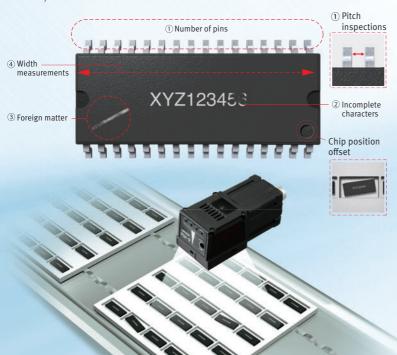

**Extended Functions: Image Inspections** 

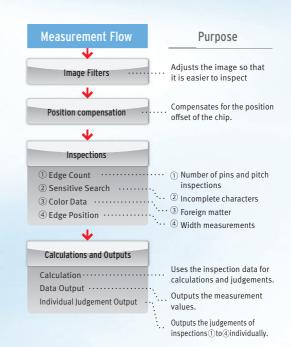

# **Easily Perform Both Inspection and Positioning**

You can combine multiple inspection items to perform external inspections, positioning, and other tasks all from a single Sensor.

# **External Inspection**

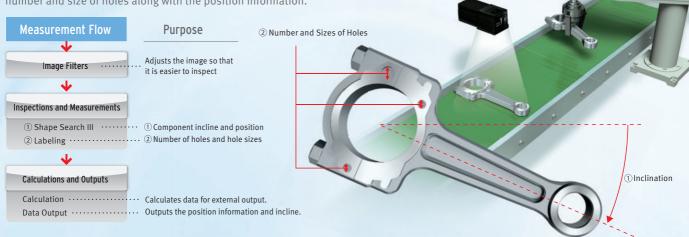

External inspection of ICs can be completed with a single Sensor. The position offset of the entire pallet before inspection can be adjusted on the image itself, which reduces the amount of work required to increase mechanical positioning accuracy.

# **Component Positioning**

The Sensor can measure angles of rotation and other position information, so it can also be used for positioning. Inspections can also be performed for the number and size of holes along with the position information.

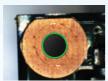

# Incorporating the Best-selling Inspection Items from High-end Vision Systems

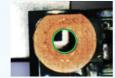

#### Searching

#### Shape Search III

The FQ2 now has Shape Search III that uses OMRON's unique techniques to search and match registered models at high speed. Shape Search III provides advanced robustness, which is critical on FA sites. High-precision and reliable position detection is possible without being affected by light interference and backgrounds.

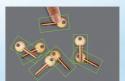

The target object can be detected precisely even with the background.

Multiple objects can be detected simultaneously even with different amounts of light.

Stable 360° searching is possible even if objects are overlapped or partially hidden.

#### Searching

#### Search

This is a standard search inspection item. This type of search is used to detect items like labels, identify shapes, or positions.

Detection of Promotional Stickers

#### **Sensitive Search**

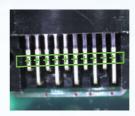

The model image can be automatically divided into small areas, so that tiny differences that cannot be detected with a normal search can be detected with large numerical differences.

#### **Edge Pitch**

#### **Edge Pitch** The number of edges in

The number of edges in a region can be counted.

#### **Edge Position**

This inspection item detects Edges and measures their positions.

#### **Edge Width**

This inspection item measures the width between edges.

#### Area Measurements, Color Measurements, and Defect & Foreign Matter Detection

#### Labeling

This inspection item counts how many labels there are of the specified color and size and measures the area or center position of the specified label.

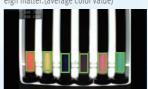

#### Area

This inspection item measures the area and center position of the specified color.

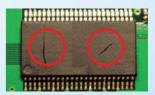

#### **Color Data**

Inspections can be performed that compare the difference in color between the workpiece and a registered image of a good product to detect objects and for-

You can also inspect for defects and foreign matter by looking at the color deviation.(color deviation)

#### **Utility Items**

#### 360° Rotational Position Compensation

The correct position of workpieces with an inconsistent orientation can be measured through automatic detection of the offset of the workpiece in relation to a registered standard model.

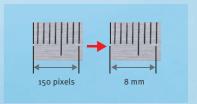

#### **Image Filters**

A total of 11 different image filters are provided, including background suppression to help eliminate patterns that can result in unstable measurements, as well as dilation and erosion.

#### Calibration

If the dimensions or position of a workpiece is difficult to determine in a pixel display, you can convert the display unit so that it is easier to see.

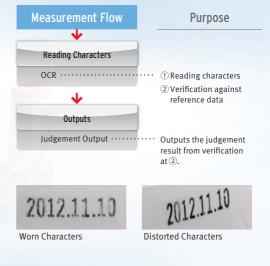

**Extended Functions: OCR** 

# New OCR Method to Quickly Read Characters without Dictionary Registration

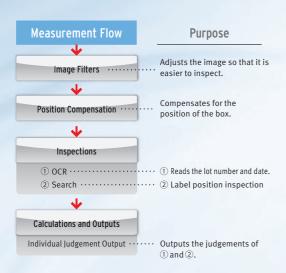

# **Date Verification**

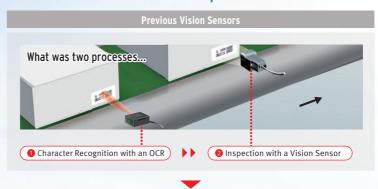

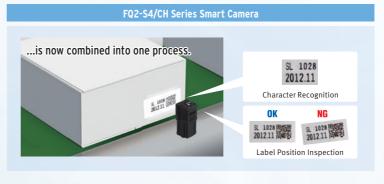

# Character Recognition and Label Position Inspection

Although previously performed as separate processes, character recognition and inspection tools can now both be performed with a single FQ2 Sensor. This helps you reduce costs and save space.

#### **OCR** with Built-in Dictionary

#### OCR

The large amount of data in the built-in dictionary contains approximately 80 different fonts that are used on FA sites. Variations for worn characters, blurring, distortion, different backgrounds, and size changes have been included to enable stable and highly accurate reading with the built-in dictionary even for some variations in the characters. It is not necessary to set parameters to compensate for character contrast or positional offsetting.

#### Conventional OCR

Time is required for character registration in the dictionary.

#### FQ2 OCR

The built-in dictionary eliminates the need for character registration in the dictionary, significantly reducing setup time.

① Draw boxes around characters. ② Set the parameters.

#### **Utilities That Make Daily Operation Easier**

#### Verification

The character data being read can be verified against the character data registered in the master data. You can register up to 32 character strings in the master data and easily change the current master data with an external signal. With the FQ2-S4, you can also compare against the character strings read from bar codes or 2D codes.

#### ■ Registration in Model Dictionary

Non conventional characters can be added to the dictionary. Special fonts are difficult to read with the default settings, but add them to the dictionary and the FQ2 provides reliable readings.

#### ■ Logging Images and Reading Data

The inspected images and reading results can be temporarily saved in the sensor. Additionally, up to 10,000 images and 10,000,000 reading results can be saved in a 4-GB SD card. You can select logging both OK and NG results or only NG results to aid in traceability.

#### Calendar Function

The calendar function eliminates the need to set the date and best-before date manually every day. You can also set the dates according to the dates set to the printer by using the command sent from the external system in addition to from the Touch Finder for the FO2

#### ■ Boundary Correction

Dark areas around characters, such as bar codes, are removed to achieve stable reading.

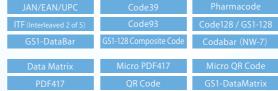

**Expanded Functions: Code Reader** 

# Read Any of 15 Types of Codes from Paper Labels to Direct Marking

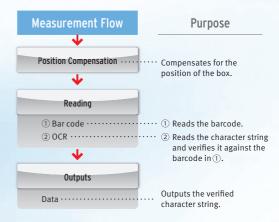

# Code and Character Verification

OCR and Code Reading inspection items can be combined to read codes and verify them against character strings all within the FQ2.

No programming of external devices is required.

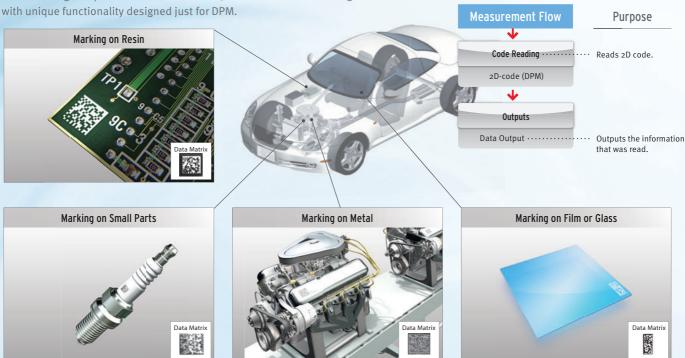

# Reading Direct Marking Codes

It has become common to manage information by directly marking codes on products. However, differences in materials often causes instability when reading the printed characters. The FQ2 achieves stable reading with unique functionality designed just for DPM. Data Matrix (ECC200) QR Code

#### • Print Quality Grading Function

The function to evaluate the quality of a 2D code (DataMatrix) enables an in-line check of the relative quality change and the parameter where the change occurred.

Note This function evaluates relative change in code quality and does not give absolute grading The FQ2-S4 with sensor version 2.20 or later provides this function.

#### Types of Filtering

You can apply up to three of the four unique filters developed by OMRON in the desired order to remove printing irregularities and noise, in order to achieve a stable reading.

| Smooth  | Smooths the image.  |
|---------|---|
| Dilate  | For white codes, increases the cell size.<br>Effective for reading codes with cell spreading. |
| Erosion | For white codes, reduces the cell size.<br>Effective for reading separated dot codes.         |
| Median  | Removes noise.  |

#### **Combining Filtering**

Erosion and dilation can be combined to connect dots without changing the dot thickness.

→ Erosion

#### · Retry function

Code Readers must be able to read codes even for poor printing conditions. You can automatically retry reading while changing the exposure time and other reading conditions, even for changing workpieces or environments, to enable a stable reading.

# Retrying the Specified Number of Times with the Same Conditions

#### 3 Retrying While Changing the Shutter Speed

Reading is performed for the same scene while changing the exposure time in stages.

#### 2 Retrying While External Trigger Is Input

#### 4 Retrying While Changing the Reading Conditions

When reading DPM codes, inconsistencies in printing conditions can result in NGs if reading is performed with only one set of reading settings. The FQ2 allows you to register up to 32 sets of reading conditions as scenes and retry reading while changing the scenes in order. The system automatically determines the scenes with the highest usage rates and changes the order to start with them to flexibly handle changes in reading conditions. Of course you can specify a fixed order if required.

Versatile

# A Lineup That Fits a Wide Range of Equipment

# Sensor

We offer a diverse lineup of Sensors so that you can choose the one with the perfect field of view and installation distance for your needs.

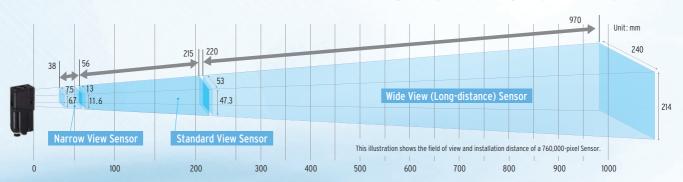

Integrated Sensor

Color Monochrome

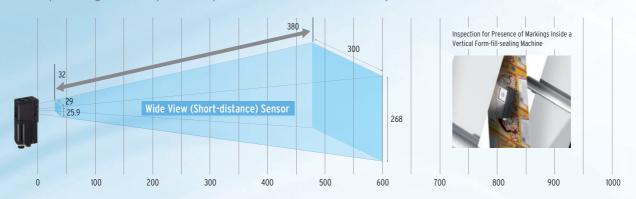

#### · Seamless Field of View Variations

All-in-one Sensors tend to be limited in field of view variations, but we offer a lineup ranging from 7.5 mm up to 240 mm to meet your needs.

#### • Wide View Sensors -- Perfect for Tight Spaces

A side-view wide-angle camera takes images and performs inspections across a wide area, even if the camera is close to the workpiece. Perfect for mounting the sensor in locations with limited space. This also enables the Sensor to be installed alongside an assembly line without protruding in order to perform inspections from the side of the conveyor belt.

#### Sensors with C-mount lens

Monochrome

The Sensors with C-mount lens enable freedom of lens selection for long distances over 1 m and narrow fields of view under 1 mm that are not covered by our integrated Sensors. This type of Sensor is also useful when you want to use external illumination.

# **Long Distance**

#### External Shape Inspections

**Lighting Examples** Backlighting

#### Low-angle Lighting

Defect and Foreign Matter Inspections

Narrow Field of View

Note: A commercially available telecentric lens is required for narrow field of view applications.

PROFIL

METT

# **Communication Interfaces**

The Sensor includes communication interfaces for compatibility with a wide range of host devices. This helps reduce the design work required for data

communications between the Sensor and a PLC. Note: The type of communications Refer to page 22 for details.

#### **PLC Link**

PLC link greatly reduces the amount of time and work that is required to create ladder programs.

#### **FINS**

OMRON's exclusive FINS/TCP communications interface can be used to connect to low-cost OMRON PLCs. With this communications interface, no communications controls are required to process the sending and receiving of complex TCP packets. You get faster, simpler connections to OMRON PLCs.

#### EtherNet/IP™

EtherNet/IP™ communications, a standard widely used in communications systems in factories around the world, is also supported. This communication interface enables simple and easy connections to a wide range of EtherNet/IP™ devices, including OMRON PLCs.

#### I/O Expansion Units

Our expansion units enable expansion to up to three times the number of I/O connections. This enables the output of individual judgement results for each inspection, a feature that has been highly requested.

#### **RS-232C Communications Unit**

This Sensor Data Unit supports standard RS-232C communications.

#### **Compatible Models**

OMRON PLCs: CS, CJ1, CJ2, CP1 and NSJ Series Mitsubishi Electric PLCs: Q Series

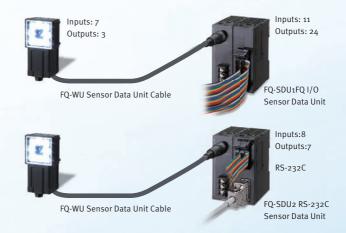

EtherNet/IP

#### **Compatible Models**

OMRON PLCs: CS, CJ1, CJ2, CP1 and NSJ Series

#### **Compatible Models**

OMRON Machine Automation Controllers: NJ Series OMRON PLCs: CS, CJ1 and CJ2 Series

# **Operation Interfaces**

You can choose the operation interface and monitor size to suit your application.

This is a small monitor with a touch panel. It's durable, rugged design is shock-resistant and portable. It has passed our standard 1.3 m drop test. On-screen messages can be changed between nine different languages: English, Traditional Chinese, Simplified Chinese, Korean, Japanese, German, French, Italian, and Spanish.

The Setup Tool provides the same functions as those on the Touch Finder, but on a PC. In addition, offline simulation can be performed without the need of a sensor. The software can be downloaded for free by any customer with the purchase of a Sensor. Refer to the member registration sheet that is enclosed with the sensor for details.

Customizing user interface using .NET controls\* makes the onsite monitor easier to read. You can increase or reduce the size of displayed measurement images and text to meet the demands of onsite operators.

- \*.Custom controls to easily display images and results measured by the FQ2 Series on applications created with Microsoft Visual Studio.

  The Microsoft® .NET software is used to connect users, information, systems, and devices.
- •Microsoft .NET is either a registered trademark or trademark of Microsoft Corporation in the United States and/or other countries.
- •EtherNet/IP™ is the trademark of ODVA.

# **Hardware Advancements**

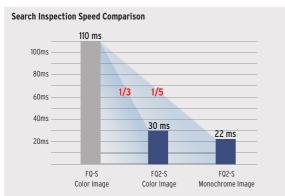

# High-speed Image Processor

**3X** Faster than Previous Models

#### 20 Inspection Items per Second Processing Time

With our new high-speed image processor we are able to achieve a processing time of 50 ms or less for all primary inspection items.

\* Processing may take longer than 50 ms depending on the settings.

Note: This comparison was conducted with a 752 imes 480 pixel image,

# High-brightness ODR Lighting

Four times the brightness of conventional LEDs can be achieved with ODR lighting

(Optical Double Reflection) that uses a complete new optics technology. High-brightness illumination was achieved by increasing light efficiency and heat dissipation, making it possible to input images this sharply for the first time.

High-speed

#### Crystal Clear Images Even through Polarizing Filter

Lighting is required for stable image inspection, but shiny surfaces can reflect light, resulting in incorrect judgments. You can use a polarizing filter to reduce specular reflection, but the entire image will be darker, which can result in insufficient image contrast. The FQ2 Series is equipped with OMRON's own high-power lighting DR optical system for effective use of LED power. This system provides sufficient lighting for inspection even when the enclosed polarizing filter is used.

# Megapixel CMOS Sensor 4 Times the Pixels

1,000 Times the Display Resolution

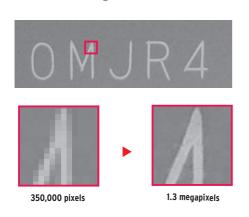

(Comparisons to previous OMRON models)

#### Precision 1.3 Megapixel Camera

Would you like a little more positioning accuracy? Do you need a wider field of view?

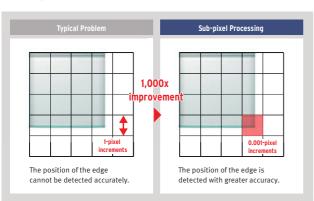

We hear you, and that is why we have greatly improved the resolution of our camera.

The 1.3 megapixels maintain precision and accuracy while also enabling a wider field of view.

#### **Sub-pixel Processing**

Previously, position information could only be output on a per-pixel basis, but now you can output at a resolution even higher than the number of available pixels. This provides finer measurement values for travel distances and helps to improve positioning accuracy.

# Megapixel CMOS Sensor

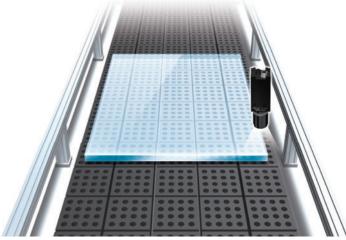

760,000 Pixels

Monochrome

Sensor with C-mount

Integrated Sensor

\* 350,000 pixels types are also available.

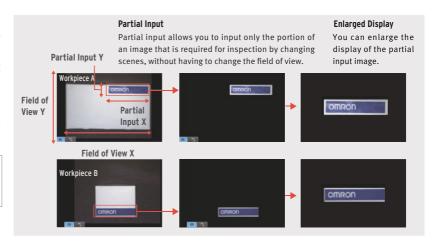

#### Partial Input with DAP (Dual Axis Partial) Processing

Processing time can be further reduced by limiting the camera input to only the area that is required for inspection. Previous models allowed trimming only in the Y direction, but now you can specify a range across both the X and Y axes for trimming. Keep a wide field of view and trim to only the sections that are required for inspection in each scene to reduce processing time.

#### [ Problems with a Standard Digital Zoom ]

Camera input is performed for all images and only a portion is shown enlarged, so this does not decrease the amount of time required for camera input.

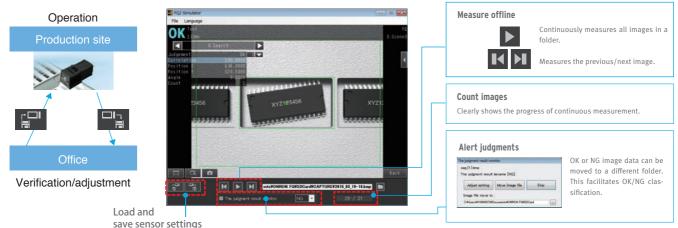

Note: DAP processing is provided only on 760,000-pixel and 1,300,000-pixel Sensors.

# **Useful Onsite Utilities**

#### **Simulation Software**

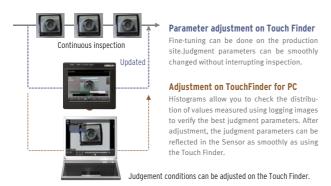

Without connecting the FQ2 Sensor, TouchFinder for PC, setup software that runs on a PC, enables offline adjustment of inspection conditions and measurement simulation using logging images. You can verify and adjust from a remote location to increase yields in overseas factories.

Note. If you register as a member after purchasing a Sensor, you can download TouchFinder for PC for free. Refer to the member registration sheet for details.

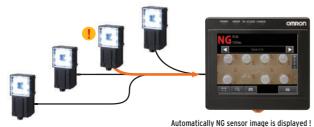

#### Real-time Threshold Adjustment

The FQ2 smart camera allows fast and easy real-time parameter adjustment. Eliminating the need to stop the machine for fine tuning and optimisation of settings, resulting in zero machine downtime.

#### **Auto Detection**

When multiple sensors are connected to the touch finder, the display automatically switches to the image of the sensor which has produced an NG result. This allows dynamic visualisation of reject conditions.

Note. When 32 sensors are connected, the most recent NG sensor of 8 sensors selected for display is displayed.

#### **Inspection History Logging**

Historical results logging is very useful for testing a new line. Samples are fed down the line and inspection results are logged. The logged data can be checked on a time scale in graph form and used to adjust judgement conditions. File Logging is convenient during operation. Large inspection history can be saved on SD cards and used later for traceability.

#### **Shortcuts**

Shortcuts to Setup Menu items that are changed frequently can be added to the Run Mode display.

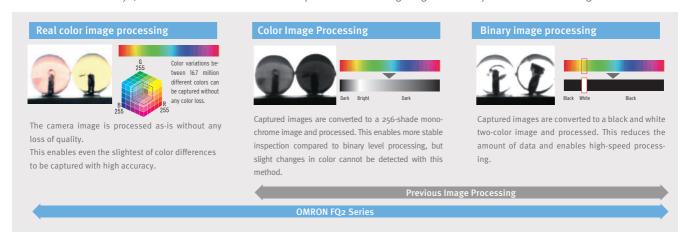

This enables the user to quickly perform adjustments when a problem occurs during operation.

# **Key Technologies**

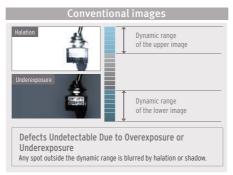

#### **Real-color Sensing**

Real-color processing is an image processing technology that performs high-speed processing of full-color images with a total of 16.7 million colors (256 tones per RGB channel). This means that image processing can be performed with the same color information that is visible to the human eye, and stable measurements can be performed under lighting that closely resembles natural light.

#### **HDR Sensing**

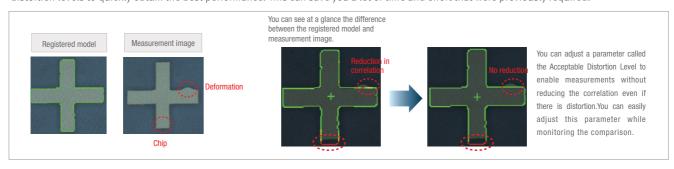

High dynamic range minimizes the effects of lighting such as halation and allows highly precise inspections.

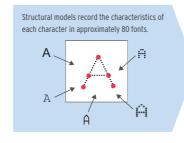

#### **Shape Search III (Same functionality included in high-end sensors)** Patent Pending

With Shape Search III, you can visualize comparisons between the registered model data the measurement object to easily see when comparisons are not optimally matched. Visualization of the comparison levels provide the guide for parameter adjustment for acceptable variation and distortion levels to quickly obtain the best performance. This can save you a lot of time and effort that were previously required.

#### New OCR Algorithm: Matching with Structural Models

Even in cases like the following one, where character registration is required for image matching methods, no character registration is required to read the characters with this new method, which matches structural models of characteristic points.

The position and structure of characteristic points are used to recognize characters.

#### **Extension Tubes**

| Model    | 3Z4S-LE SV-EXR                     |  |  |  |  |  |  |  |
|----------|------------------------------------|--|--|--|--|--|--|--|
|          | Set of 7 tubes                     |  |  |  |  |  |  |  |
| Contents | (40 mm, 20 mm, 10 mm, 5 mm,        |  |  |  |  |  |  |  |
| Contents | 2.0 mm,1.0 mm, and 0.5 mm)         |  |  |  |  |  |  |  |
|          | Maximum outer diameter: 30 mm dia. |  |  |  |  |  |  |  |

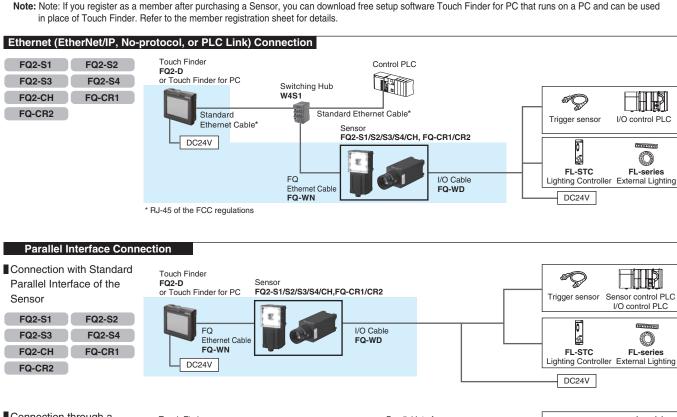

- \*Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these ExtensionTubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0- mm or 2.0-mm Extension Tube are used together.
- \* Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used.

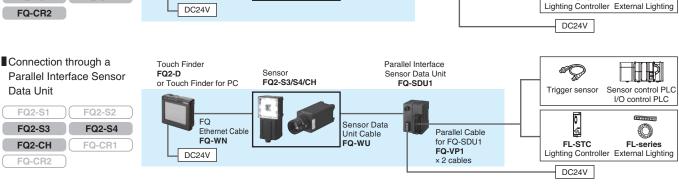

Up to 32 Sensors can be set up and monitored from a single Touch Finder or Touch Finder for PC. Various types of Sensors can be used at the same time.

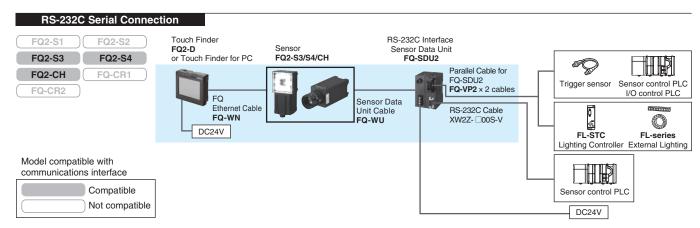

However, I/O type and wiring method vary depending on the Sensor, so select the necessary devices.

Note: Note: If you register as a member after purchasing a Sensor, you can download free setup software Touch Finder for PC that runs on a PC and can be used

| Ambient temperature range         | Operating: 0 to 40°C<br>Storage: –25 to 65°C (with no icing or condensation) |  |
| Ambient humidity range            | Operating and storage: 35% to 85% (with no condensation)                     |  |
| Charging method                   | Charged in Touch Finder (FQ2-D31). AC adapter (FQ-AC□) is required.          |  |
| Charging time *1                  | 2 h  |  |
| Usage time *1                     | 1.5 h  |  |
| Battery backup life (See note 2.) | 300 charging cycles  |  |
| Weight                            | 50 g max.  |  |

#### System Requirements for Touch Finder for PC

The following Personal Computer system is required to use the software.

| os      | Microsoft Windows 7 Home Premium or higher (32-bit/64-bit version) Microsoft Windows 8.1 Pro Edition or higher (32-bit/64-bit version) Microsoft Windows 10 Home Edition or higher (32-bit/64-bit version) |
|---------|--|
| CPU     | Core 2 Duo 1.06 GHz or the equivalent or higher  |
| RAM     | 1GB min.   |
| HDD     | 500 MB min. available space *  |
| Monitor | 1,024 × 768 dots min.  |

<sup>\*.</sup> Available space is also required separately for data logging.

This value is only a guideline. No guarantee is implied. The value will be affected by operating conditions
This is a guideline for the time required for the capacity of the Battery to be reduced to 60% of the initial capacity. No guarantee is implied. The value will be affected by the operating environment and operating conditions.

#### **READ AND UNDERSTAND THIS CATALOG**

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

#### WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

#### LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

#### **SUITABILITY FOR USE**

THE PRODUCTS CONTAINED IN THIS CATALOG ARE NOT SAFETY RATED. THEY ARE NOT DESIGNED OR RATED FOR ENSURING SAFETY OF PERSONS, AND SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR SUCH PURPOSES. Please refer to separate catalogs for OMRON's safety rated products.

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- · Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### **PERFORMANCE DATA**

Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

#### **CHANGE IN SPECIFICATIONS**

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

#### **DIMENSIONS AND WEIGHTS**

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

#### **ERRORS AND OMISSIONS**

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

#### **PROGRAMMABLE PRODUCTS**

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

#### **COPYRIGHT AND COPY PERMISSION**

This document shall not be copied for sales or promotions without permission.

This document is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this document in any manner, for any other purpose. If copying or transmitting this document to another, please copy or transmit it in its entirety.

# **Vision Series Lineup**

The lineup covers everything from cost-effective Smart Cameras to ultra-high-speed Vision Systems.

Choose the best combination for your budget and needs.

Note: Do not use this document to operate the Unit.
