With this kit, designers can write complex uC/OS-II based code and debug within the Atmel AVR Studio framework. The kit contains complete source code for the Micrium uC/OS-II real-time OS, kernel-aware plug-ins for AVR Studio- and Micrium-supported versions for ATmega128/2561, documentation, and CD-ROM with software. The kit supports STK500/501/503 and JTAGICE mkII. The [AVR Studio](#) online-help contains the most current information and a complete list of supported devices. [Find more information here.](#)
