Typical Applications

This amplifier is ideal for use as a power/driver amplifier for 1.6 - 2.2 GHz applications:

- Cellular / PCS / 3G
- Portable & Infrastructure
- Wireless Local Loop

Features

Gain: 23 dB
Saturated Power: +29.5 dBm
42% PAE
Supply Voltage: +2.75V to +5V
Power Down Capability
Low External Part Count
Included in the HMC-DK002 Designer's Kit

Functional Diagram

General Description

The HMC413QS16G & HMC413QS16GE are high efficiency GaAs InGaP Heterojunction Bipolar Transistor (HBT) MMIC Power amplifiers which operate between 1.6 and 2.2 GHz. The amplifier is packaged in a low cost, surface mount 16 lead package with an exposed base for improved RF and thermal performance. With a minimum of external components, the amplifier provides 23 dB of gain, +29.5 dBm of saturated power at 42% PAE from a +5V supply voltage. The amplifier can also operate with a 3.6V supply. Vpd can be used for full power down or RF output power/current control.

Electrical Specifications, $T_A = +25^\circ\text{C}$, As a Function of V_s , $V_{pd} = 3.6\text{V}$

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 2, 4, 5, 7, 8, 9, 10, 13, 15	GND	Ground: Backside of package has exposed metal ground slug that must be connected to ground thru a short path. Vias under the device are required.	
3, 14	Vpd1, Vpd2	Power Control Pin. For maximum power, this pin should be connected to 3.6V. For 5V operation, a dropping resistor is required. A higher voltage is not recommended. For lower idle current, this voltage can be reduced.	
6	RFIN	This pin is AC coupled and matched to 50 Ohms from 1.6 to 2.2 GHz.	
11, 12	RFOUT	RF output and bias for the output stage.	
16	Vcc	Power supply voltage for the first amplifier stage. An external bypass capacitor of 330 pF is required as shown in the application schematic.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation board should be mounted to an appropriate heat sink. The evaluation circuit board shown is available from Hittite upon request.
