

CDC5801

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS682B – OCTOBER 2002 – OCTOBER 2005

- Low Jitter Clock Multiplier by x4, x6, x8. Input Frequency Range (19 MHz to 125 MHz). Supports Output Frequency From 150 MHz to 500 MHz
- Low Jitter Clock Divider by /2, /3, /4. Input Frequency Range (50 MHz to 125 MHz). Supports Ranges of Output Frequency From 12.5 MHz to 62.5 MHz
- 2.6 mUI Programmable Bidirectional Delay Steps
- Typical 8.0-ps Phase Jitter (12 kHz to 20 MHz) @ 500 MHz
- Typical 2.1-ps RMS Period Jitter (Entire Frequency Band) @ 500 MHz
- One Single-Ended Input and One Differential Output Pair
- Output Can Drive LVPECL, LVDS, and LVTTTL
- Three Power Operating Modes to Minimize Power
- Low Power Consumption (Typical 200 mW at 500 MHz)
- Packaged in a Shrink Small-Outline Package (DBQ)
- No External Components Required for PLL
- Spread Spectrum Clock Tracking Ability to Reduce EMI
- Applications: Video Graphics, Gaming Products, Datacom, Telecom
- Accepts LVCMOS, LVTTTL Inputs for REFCLK Terminal
- Accepts Other Single-Ended Signal Levels at REFCLK Terminal by Programming Proper V_{DDREF} Voltage Level (For Example, HSTL-1.5 if $V_{DDREF} = 1.6$ V)
- Supports Industrial Temperature Range of -40°C to 85°C

NC – No internal connection

description

The CDC5801 device provides clock multiplication and division from a single-ended reference clock (REFCLK) to a differential output pair (CLKOUT/CLKOUTB). The multiply and divide terminals (MULT/DIV0:1) provide selection for frequency multiplication and division ratios, generating CLKOUT/CLKOUTB frequencies ranging from 12.5 MHz to 500 MHz with a clock input reference (REFCLK) ranging from 19 MHz to 125 MHz. Please see Table 1 and Table 2 for detail frequency support.

The implemented phase aligner provides the possibility to phase align (zero delay) between CLKOUT/CLKOUTB and REFCLK or any other CLK in the system by feeding the clocks that need to be aligned to the DLYCTRL and the LEADLAG terminals.

The phase aligner also allows the user to delay or advance the CLKOUT/CLKOUTB with steps of 2.6 mUI (unit interval). For every rising edge on the DLYCTRL terminal the output clocks are delayed by 2.6-mUI step size as long as there is low on the LEADLAG terminal. Similarly for every rising edge on the DLYCTRL terminal the output clocks are advanced by 2.6-mUI step size as long as there is high on the LEADLAG terminal. As the phase between REFCLK and CLKOUT/CLKOUTB is random after power up, the application may implement a self calibration routine at power up to produce a certain phase start position, before programming a fixed delay with the clock on the DLYCTRL terminal.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

CDC5801

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS682B – OCTOBER 2002 – OCTOBER 2005

Depending on the selection of the mode terminals (P0:2), the device behaves as a multiplier (by 4, 6, or 8) with the phase aligner bypassed or as a multiplier or divider with programmable delay and phase aligner functionality. Through the select terminals (P0:2) user can also bypass the phase aligner and the PLL (test mode) and output the REFCLK directly on the CLKOUT/CLKOUTB terminals. Through P0:2 terminals the outputs could be in a high impedance state. This device has another unique capability to be able to function with a wide band of voltages on the REFCLK terminal by varying the voltage on the V_{DDREF} terminal.

The CDC5801 device is characterized for operation over free-air temperatures of -40°C to 85°C .

NOT RECOMMENDED FOR NEW DESIGNS

SCAS682B – OCTOBER 2002 – OCTOBER 2005

functional block diagram

FUNCTION TABLE†

MODE	P0	P1	P2	CLKOUT/CLKOUTB
Multiplication with programmable delay and phase alignment active‡	0	0	0	REFCLK multiplied by ratio per Table 1 selected by MULT/DIV terminals. Outputs are delayed or advanced based on DLYCTRL and LEADLAG terminal configuration.
Division with programmable delay and phase alignment active‡	0	0	1	REFCLK divided by ratio per Table 2 selected by MULT/DIV terminals. Outputs are delayed or advanced based on DLYCTRL and LEADLAG terminal configuration.
Multiplication only mode (phase aligner bypassed) §	1	0	0	In this mode one can only multiply as per Table 1. Programmable delay capability and divider capability is deactivated. PLL is running.
Test mode	1	1	0	PLL and phase aligner both bypassed. REFCLK is directly channeled to output.
Hi-Z mode	0	1	X	Hi-Z

† X = don't care, Hi-Z = high impedance

‡ Please see Table 4 and Table 5 for explanation for the programmability and phase alignment functions.

§ In this mode the DLYCTRL and LEADLAG terminals must be strapped high or low. Lowest possible jitter is achieved in this mode, but a delay of 200 ps to 2 ns expected typically from REFCLK to CLKOUT depending on the output frequency.

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS682B – OCTOBER 2002 – OCTOBER 2005

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
CLKOUT	20	O	Output clock
CLKOUTB	18	O	Output clock (complement)
DLYCTRL	7	I	Every rising edge on this terminal delays/advances the CLKOUT/CLKOUTB signal by 1/384th of the CLKOUT/CLKOUTB period. (e.g., for a 90 degree delay or advancement one needs to provide 96 rising edges). See Table 4.
GND	5		GND for V _{DDREF} and V _{DDPD}
GND0	17, 21		GND for clock output terminals (CLKOUT, CLKOUTB)
GNDP	4		GND for PLL
GNDPA	8		GND for phase aligner
LEADLAG	6	I	Decides if the output clock is delayed or advanced with respect to REFCLK. See Table 4.
MULT0/DIV0	15	I	PLL multiplier and divider select
MULT1/DIV1	14	I	PLL multiplier and divider select
NC	19		Not used
PWRDNB	12	I	Active low power down state, CLKOUT/CLKOUTB goes low
P0	24	I	Mode control, see Function Table
P1	23	I	Mode control, see Function Table
P2	13	I	Mode control, see Function Table
REFCLK	2	I	Reference input clock
STOPB	11	I	Active low output disabler, PLL and PA still running, CLKOUT and CLKOUTB goes to a dc value as per Table 3
VDDPA	9	I	Supply voltage for phase aligner
VDDPD	10	I	Reference voltage for the DLYCTRL, LEADLAG terminals and STOPB function
VDDREF	1	I	Reference voltage for REFCLK
VDD0	16, 22	I	Supply voltage for the output terminals (CLKOUT, CLKOUTB)
VDDP	3	I	Supply voltage for PLL

CDC5801

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS682B – OCTOBER 2002 – OCTOBER 2005

PLL divider/multiplier selection

Table 1 and Table 2 list the supported REFCLK and BUSCLK (CLKOUT/CLKOUTB) frequencies.

Table 1. Multiplication Ratios (P0:2 = 000 or 100)

MULT0	MULT1	REFCLK (MHZ)	MULTIPLICATION RATIO	BUSCLK (MHZ)
0	0	38–125	4	152–500
0	1	25–83.3	6	150–500
1	1	19–62.5	8	152–500

Table 2. Divider Ratio (P0:2 = 001)

MULT0	MULT1	REFCLK (MHZ)	DIVISION RATIO	BUSCLK (MHZ)
0	0	100–125	2	50–62.5
1	0	75–93	3	25–31
1	1	50–62	4	12.5–15.5

Table 3. Clock Output Driver States

STATE	PWRDNB	STOPB	CLKOUT	CLKOUTB
Powerdown	0	X	GND	GND
CLK stop	1	0	V _O , STOP	V _O , STOP
Normal	1	1	As per Function Table	As per Function Table

Table 4. Programmable Delay and Phase Alignment

DLYCTRL	LEADLAG	CLKOUT AND CLKOUTB
Each rising edge [†]	1	Will be advanced by one step size (see Table 5)
Each rising edge [†]	0	Will be delayed by one step size (see Table 5)

[†] For every 32nd edge, there are one or two edges the phase aligner does not update. Therefore, CLKOUT phase is not updated on every 32nd edge.

Table 5. Clock Output Driver States

FUNCTIONALITY	STEP SIZE
Multiply by 4, 6, 8	CLKOUT period/384 (for example, 6.5 ps @ 400 MHz)
Divide by 2	CLKOUT period/3072 (for example, 6.5 ps @ 50 MHz)
Divide by 3	CLKOUT period/6144 (for example, 6.5 ps @ 25 MHz)
Divide by 4	CLKOUT period/12288 (for example, 6.5 ps @ 12.5 MHz)

NOTE: The frequency of the DLYCTRL terminal must always be equal or less than the frequency of the LEADLAG terminal.

LOW JITTER CLOCK MULTIPLIER AND DIVIDER WITH PROGRAMMABLE DELAY AND PHASE ALIGNMENT

SCAS682B – OCTOBER 2002 – OCTOBER 2005

absolute maximum ratings over operating free-air temperature (unless otherwise noted)[†]

Supply voltage range, V_{DD} (see Note 1)	–0.5 V to 4 V
Output voltage range, V_O , at any output terminal	–0.5 V to $V_{DD} + 0.5$ V
Input voltage range, V_I , at any input terminal	–0.5 V to $V_{DD} + 0.5$ V
Continuous total power dissipation	see Dissipation Rating Table
Operating free-air temperature range, T_A	–40°C to 85°C
Storage temperature range, T_{stg}	–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to the GND terminals.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = 25^\circ\text{C}$ [‡]	$T_A = 85^\circ\text{C}$ POWER RATING
DBQ	1400 mW	11 mW/°C	740 mW

[‡] This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

recommended operating conditions

$t_{\text{(powerup)}}$	Delay time, PWRDNB↑ to CLKOUT/CLKOUTB output settled (excluding $t_{\text{(DISTLOCK)}}$)	Powerdown	Normal	See Figure 6			3	ms
	Delay time, PWRDNB↑ to internal PLL and clock are on and settled						3	
$t_{\text{(VDDpowerup)}}$	Delay time, power up to CLKOUT/CLKOUTB output settled	V _{DD}	Normal	See Figure 6			3	ms
	Delay time, power up to internal PLL and clock are on and settled						3	
$t_{\text{(MULT)}}$	MULT0 and MULT1 change to CLKOUT/CLKOUTB output resettled (excluding $t_{\text{(DISTLOCK)}}$)	Normal	Normal	See Figure 7			1	ms
$t_{\text{(CLKON)}}$	STOPB↑ to CLKOUT/CLKOUTB glitch-free clock edges	CLK Stop	Normal	See Figure 8			10	ns
$t_{\text{(CLKSETL)}}$	STOPB↑ to CLKOUT/CLKOUTB output settled to within 50 ps of the phase before STOPB was disabled	CLK Stop	Normal	See Figure 8			20	cycles
$t_{\text{(CLKOFF)}}$	STOPB↓ to CLKOUT/CLKOUTB output disabled	Normal	CLK Stop	See Figure 8			5	ns
$t_{\text{(powerdown)}}$	Delay time, PWRDNB↓ to the device in the power-down mode	Normal	Power-down	See Figure 6			1	ms
$t_{\text{(STOP)}}$	Maximum time in CLKSTOP (STOPB = 0) before reentering normal mode (STOPB = 1)	STOPB	Normal	See Figure 8			100	μs
$t_{\text{(ON)}}$	Minimum time in normal mode (STOPB = 1) before reentering CLKSTOP (STOPB = 0)	Normal	CLK stop	See Figure 8	100			ms

† All typical values are at V_{DD} = 3.3 V, T_A = 25°C.

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
 - D. Falls within JEDEC MO-137.

PACKAGING INFORMATION

Orderable Device	Status ⁽¹⁾	Package Type	Package Drawing	Pins	Package Qty	Eco Plan ⁽²⁾	Lead/Ball Finish	MSL Peak Temp ⁽³⁾

CDC5801DBQRG4	ACTIVE	SSOP/ QSOP	DBQ	24	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-2-260C-1 YEAR

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
