

RCE Series

Digital pressure transducers

FEATURES

- 0...25 mbar to 0...5 bar,
0...±10 mbar to 0...±1 bar,
barometric range 600...1100 mbar
- Absolute, gage or differential pressure
- Digital readout via SPI bus
- Precision ASIC conditioning
- Calibrated and temperature compensated
- Total accuracy ±1.0 %FSS
- Sensortech PRO services

MEDIA COMPATIBILITY

To be used with non-corrosive, non-ionic working fluids such as clean dry air, dry gases and the like.

SPECIFICATIONS

Maximum ratings

Supply voltage V_s	4.75 V to 5.25 V _{DC} max. 6.50 V _{DC}
Output current	
Sink	2 mA
Source	2 mA
Lead temperature (2 - 4 sec.)	250°C
Temperature ranges	
Compensated	0 to +85 °C
Operating	-10 to +85 °C
Storage	-20 to +105 °C

Caution!

The sensor is not reverse polarity protected.

Incorrect applications of excitation voltage or ground to the wrong pin can cause electrical failure.

Application of supply voltage above the maximum can cause electrical failure.

ELECTRICAL CONNECTION

RCE Series

Digital pressure transducers

PRESSURE RANGES SPECIFICATIONS

($V_S = 5.0 V_{DC}$, $T_A = 25^\circ C$)

Part number	Pressure range		Burst pressure ¹		Sensitivity (typ.)	
RCE0611AR	600...1100	mbar(a)	2	bar (a)	6.4	counts/ mbar
RCEB001AU	0...1	bar (a)	2		3.2	
RCEB002AU	0...2		5		1.6	
RCEB005AU	0...5		10		0.6	
RCEM025DU	0...25	mbar (g,d)	0.2	bar (g,d)	128	
RCEM050DU	0...50		0.35		64	
RCEM100DU	0...100		0.35		32	
RCEM250DU	0...250		1		12.8	
RCEM500DU	0...500	bar (g,d)	1		6.4	
RCEB001DU	0...1		2		3.2	
RCEB002DU	0...2		5		1.6	
RCEB005DU	0...5		10		0.6	
RCEM010DB	0...±10	mbar (d)	0.2	bar (d)	160	
RCEM025DB	0...±25		0.2		64	
RCEM050DB	0...±50		0.35		32	
RCEM100DB	0...±100		0.35		16	
RCEM250DB	0...±250		1		6.4	
RCEM500DB	0...±500		1		3.2	
RCEB001DB	0...±1	bar(d)	2		1.6	

Specification notes:

1. If maximum burst pressure is exceeded, even momentarily, the package may leak or burst, or the pressure sensing die may fracture.
2. Full Scale Span (FSS) is the algebraic difference between the output signal for the highest and lowest specified pressure.
3. Total accuracy is the combined error from offset and span calibration, linearity, pressure hysteresis, and temperature effects. Linearity is the measured deviation based on a straight line. Hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure. Calibration errors include the deviation of offset and full scale from nominal values.
4. Delay time between sampling and signal change at the output.

RCE Series

Digital pressure transducers

PERFORMANCE CHARACTERISTICS

The output signal is not ratiometric to the supply voltage ($V_S = 5.0 V_{DC}$, $T_A = 25^\circ C$)

All RCE...(U,R)

Characteristics	Min.	Typ.	Max.	Units
Offset at lowest specified pressure	1700	2000	2300	counts
Full scale span (FSS) ²		30000		
Full scale output	31700	32000	32300	

All RCE...B

Characteristics	Min.	Typ.	Max.	Units
Zero pressure offset	16700	17000	17300	counts
Full scale span (FSS) ²		30000		
Output at max. specified pressure	31700	32000	32300	
Output at min. specified pressure	1700	2000	2300	

All devices

Characteristics	Min.	Typ.	Max.	Units
Total accuracy (0 to 85°C) ³			±1.0	%FSS
Response delay ⁴		500		µs
Current consumption		5		mA
SPI-clock frequency			1	MHz
Input - high level	0.7		1	Vs
Input - low level	0		0.3	
Output - low level			0.1	
Pull-up resistor	500			Ω

SPI - SERIAL PERIPHERAL INTERFACE

INTRODUCTION

The RCE is capable to generate a digital output signal. The device runs a cyclic program, which will store a corrected sensor value with 12-bit resolution about every 250 μ s within the output registers of the internal ASIC. This cyclic program runs independent from the bus communication. In order to use the RCE pressure sensor for digital signal readout, it should be connected to a SPI Master device.

SPI specifies four signals: The clock (CLK) is generated by the master and input to all slaves. MOSI carries data from master to slave. MISO carries data from slave back to master. A slave select line (SS) allows individual selection of a slave device.

In general the RCE supports all combinations of clock phase (CPHA) and polarity (CPOL). By default it is programmed to CPHA = 0 and CPOL = 0, which means that the data is latched with the rising edge of the clock.

Slave select:

The falling edge of the SS line indicates the beginning of the transfer. Additionally the SS line must not be negated and reasserted between the three bytes to be transmitted.

Data operation:

The MOSI is internally connected to high level. So there is no data transmission from master to slave. Because of internal configuration the slave will answer the first byte with an FFh. The second and third byte contain the 15 bit pressure information (see below).

DIGITAL INTERFACE

SPI Modes:

A pair of parameters called clock polarity (CPOL) and clock phase (CPHA) determine the edges of the clock signal on which the data are driven and sampled. Each of the two parameters has two possible states, which allows for four possible combinations, all of which are incompatible with one another.

0...±25 mbar		RCEM025DB
0...±50 mbar		RCEM050DB
0...±100 mbar		RCEM100DB
0...±250 mbar		RCEM250DB
0...±500 mbar		RCEM500DB
0...±1 bar		RCEB001DB

Sensortech PRO services:

- Extended guarantee period of 2 years
 - Improved performance characteristics
 - Custom product modifications and adaptations even for small quantities
 - Advanced logistics models for supply inventory and short delivery times
 - Technical support through application engineers on the phone or at your site
 - Fastest possible technical response for design and QA engineers
- ... plus other services on request
