

# 2-channel switching regulator controller

## BA9743AFV

The BA9743AFV is a 2-channel switching regulator controller that uses a pulse width modulation (PWM) system. Both channels can be used for DC / DC converter operations including step up, step down, and inverting. Because the IC is compactly packaged, it is best suited for use as a power supply in portable equipment.

### ●Applications

DC / DC converters in VCRs, notebook computers, etc.

### ●Features

- 1) Built-in reference voltage current ( $\pm 1\%$ ).
- 2) Timer latch, short-circuit protection circuit is built in.
- 3) Circuit to prevent malfunction during low input voltage is built in.
- 4) Built-in reference voltage (2.505V) output pin.
- 5) Rest period is adjustable over the whole range of duty ratio.
