WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

Installing Fibers

Cutting Underterminated Plastic Fibers

Underterminated plastic fibers are designed to be cut by the user to the length required for the application.

To facilitate cutting, a Banner model PFC-1 cutting device is supplied with the fiber. Cut the fiber as follows:

Use small ports for fiber sizes:

- 0.25 mm (0.01 inches)
- 0.5 mm (0.02 inches)

Use large ports for fiber sizes:

- 0.75 mm (0.03 inches)
- 1.0 mm (0.04 inches)
- 1.5 mm (0.06 inches)

1. Locate the "control end" of the fiber (the unfinished end).
2. Determine the length of fiber required for the application. If using a bifurcated fiber, separate the two halves of the fiber at least 2 inches beyond the fiber cutting location.
3. Lift the top (blade) of the cutter to open the cutting ports.
4. Insert one of the control ends through one of the cutting ports on the PFC-1 cutter so that the excess fiber protrudes from the back of the cutter.
5. Double-check the fiber length, and close the cutter until the fiber is cut.
6. Using a different cutting port, cut the second control end to the required length. To ensure a clean cut each time, do not use a cutting port more than once.
7. Gently wipe the cut ends of the fiber with a clean, dry cloth to remove any contamination. Do not use solvents or abrasives on any exposed optical fiber.

Installing Plastic Fibers

Follow these steps to install the plastic fibers.

1. Unlock the fiber gripper as shown (A). When using 0.25 mm or 0.5 mm core fibers, slide the small fiber adapters onto the fibers, flush with the fiber ends.
2. Gently insert the prepared plastic fiber ends into the ports (B), as far as they will go.
3. Slide the fiber gripper back to lock (C).

Installing Glass Fibers

Follow these steps to install the glass fibers.

1. Install the O-ring (supplied with the fiber) on each end, as shown in the drawing.
2. Press the fiber ends firmly into the ports on the front of the sensor and slide the U-shaped retaining clip (supplied with the sensor) into the slot in the sensor's barrel until the clip snaps into place.
