Notes:□

□

The value of L2 must be adjusted as the supply voltage is changed to maintain resonance in the output circuit. At 81 MHz its value changes from approximately 50 nH at 100V to 70 nH at 165V.□

□

The duty cycle past 100V must be reduced to insure power dissipation is within the limits of the device. Maximum pulse length should be 100mS or less. See figure 7.

Package Dimensions (inches)

HAZARDOUS MATERIAL WARNING□

□

The ceramic portion of the device between leads and mounting flange is beryllium oxide. Beryllium oxide dust is highly toxic when inhaled. Care must be taken during handling and mounting to avoid damage to this area. These devices must never be thrown away with general industrial or domestic waste.
