Description

M/A-COM's PH1214-12M is a silicon bipolar NPN power transistor intended for use in L-band 1.2 - 1.4 GHz pulsed radar's such as air traffic control and long-range weather radars. Designed for common-base, class C, broadband pulsed power applications, the PH1214-12M can produce 12 watts of output power with medium pulse length (150 μ S) at 10 percent duty cycle. The transistor is housed in a 2-lead, rectangular metal-ceramic flange package, with internal input and output impedance matching networks. Diffused emitter ballast resistors and gold metalization assure ruggedness and long-term reliability.
