*1. Use within a range where the green indicator is lit.

*2. The response frequencies for DC switching are average values measured on condition that the distance between each sensing object is twice as large as the size of the sensing object and the sensing distance set is half of the maximum sensing distance.

Precautions

Correct Use

Design

Effects of Surrounding Metal

Provide a minimum distance as shown in the table below between the Sensor and the surrounding metal.

Effects of Surrounding Metal (Unit: mm)

Model	Item Surround-	l	d	D	m	n
E2EZ-X4□	Steel	0	18	0	16	27
	Aluminum	5	40	5		54
E2EZ-X8□	Steel	0	30	0	32	45
	Aluminum	10	70	10		90

Mutual Interference

When installing two or more E2EZ face to face or side by side, ensure that the minimum distances given in the following table maintained.

Mutual Interference (Unit: mm)

Model	Item	A	B
E2EZ-X4□		40	50
E2EZ-X8□		60	100

Aluminum and Cast Iron Cut Chips

A detection signal will not be output if aluminum or cast iron cut chips are stuck to the sensing face. Under the following conditions, however, the proximity sensor may output detection signals, in which case remove the cut chips from the sensing face.

(1) About the external diameter (d) of a cut chip and the diameter (D) of the sensing surface

If the external diameter (d) of a cut chip is two-thirds the diameter (D) of the sensing face as shown in the illustration.

(Unit: mm)

Model	Length	D
E2EZ-X4□		16
E2EZ-X8□		28

(2) If cut chips are pressed onto the sending face as shown in the illustration.

Mounting

Do not tighten the nut with excessive force. A washer must be used with the nut.

Note: 1. The table below shows the tightening torques for part A and part B nuts. In the previous examples, the nut is on the sensor head side (part B) and hence the tightening torque for part B applies. If this nut is in part A, the tightening torque for part A applies instead.
2. The table below shows the value of tightening torques when using toothed washers.

Tightening torques		Part A		Part B
Model	Length (mm)	Tensile strength (torque)		Tensile strength (torque)
