

Rad-hard 16-bit transceiver, bidirectional level shifter

Ceramic Flat-48

The upper metallic lid is electrically connected to ground (see availability in order codes table)

Product status link

[54VCXH163245](#)

Features

- 1.4 V to 3.6 V operating supply
- Dual supply bidirectional level shifter
- Separated enable pin for 3-state output
- Internal 26 Ω limiting resistor on each A side output buffer
- Bus hold
- Fail safe
- Cold spare
- Hermetic package
- 300 krad (Si) TID
- SEL-free at 110 MeV.cm²/mg LET
- SMD: 5962F11207
- Mass: 1.5 g

Description

The **54VCXH163245** is a rad-hard advanced high-speed CMOS, 16-bit bidirectional, multi-purpose transceiver with 3-state outputs and cold sparing.

Designed to be used as an interface between a 3.3 V bus and a 1.8 V bus in mixed 3.3 V/1.8 V supply systems, the **54VCXH163245** is able to operate at a minimum of 1.4 V (the functionality is guaranteed at 1.4 V min., the performance are guaranteed at 1.65 V min.).

All pins have cold spare buffers to change them to high impedance when V_{DD} is tied to ground.

This IC is intended for a two-way asynchronous communication between data buses. The direction of data transmission is determined by the nDIR inputs.

1 Functional description

Figure 1. Logic diagram

Table 1. Truth table

Inputs		Function		Outputs	Comments
m G	mDIR	Bus A	Bus B		
L	L	Output	Input	A = B	H = high-voltage level
L	H	Input	Output	B = A	L = low-voltage level
H	X	Z	Z	Z	Z = high impedance X = irrelevant or don't care

1.1 Cold spare

The 54VCXH163245 features a cold spare input and output buffer. In high reliability applications, cold sparing enables a redundant device to be tied to the data bus with its power supply at 0 V ($V_{CC} = 0$ V) without affecting the bus signals or injecting current from the I/Os to the power supplies. Cold sparing also allows redundant devices that are not powered to be switched on when required only. Power consumption is therefore reduced by switching off the redundant circuit. This has no impact on the application. Cold sparing is achieved by implementing a high impedance between I/Os and V_{CC} . The ESD protection is ensured through a non-conventional dedicated structure. Using cold spare on Bus A and Bus B separately is not allowed. In cold spare, both V_{CCA} and V_{CCB} must be at 0 V.

Figure 2. Cold spare and cold redundancy

1. $R = I_{off}/V_{CC}$

1.2 Power-up and operating

During power-up, all outputs should be forced to high impedance by setting /OEx high, after VCCA and VCCB are switched on, /OEx can be set low.

- In power-up:
VCCB must be powered up before VCCA, or simultaneously with VCCA.
- In operating mode, to guarantee proper operation functionality after power-up:
VCCA has to be above or equal to VCCB (VCCB higher than VCCA is forbidden)
- In power-down:
VCCA must be powered down before VCCB, or simultaneously with VCCB.

Warning: If these power sequencing are not respected, the integrity (reliability, aging) is not impacted, however an erroneous signal can occur on the outputs during power-up and power-down.

Figure 3. Power supply domain

Note: Control signals on DIRx and /OEx, corresponding CMOS logic levels that apply to all control inputs are:
 $V_{ILmax} = 0.35 \times VCCB$ and $V_{IHmin} = 0.65 \times VCCB$.
 For a proper operation, connect power to all VCC and ground all GND pins (i.e., no floating VCC or GND pins).
 Tie all unused inputs to GND.

2 Absolute maximum ratings and operating conditions

Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Stresses above the absolute maximum ratings may cause permanent damage to the device. Extended operation at the maximum levels may degrade performance and affect reliability. Unless otherwise noted, all voltages are referenced to GND. The limits for the parameters specified herein apply over the full specified V_{CC} range and case temperature range of -55 °C to 125 °C.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage referred to GND (V_{CCA} and V_{CCB}) ⁽¹⁾	-0.5 to 4.6	V
V_{IA}	DC input voltage range port A referred to GND	-0.5 to 4.6	
V_{IB}	DC input voltage range port B referred to GND	-0.5 to 4.6	
G/DIR	DC input voltage range G and DIR referred to GND	-0.5 to 4.6	
V_{OA}	DC output voltage range port A referred to GND	-0.5 to $V_{CCA} + 0.5$ V	
V_{OB}	DC output voltage range port B referred to GND	-0.5 to $V_{CCB} + 0.5$ V	
I_{IA}	DC input currents port A, anyone input	± 20	mA
I_{IB}	DC input currents port B, anyone input	± 20	
T_{stg}	Storage temperature range	-65 to 150	°C
T_L	Lead temperature (during 10 sec.)	260	
T_J	Junction temperature range	150	
R_{thjc}	Thermal resistance junction-to-case ⁽²⁾	22	°C/W
ESD	HBM: human body model ⁽³⁾	2	kV
	No Latch-up at 300 mA (JESD 17)		

- V_{CCA} must be higher or equal to V_{CCB} . (V_{CCB} higher than V_{CCA} is forbidden).
- Short-circuits can cause excessive heating and destructive dissipation. Values are typical.
- Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.

Table 4. Operating conditions

Symbol	Parameter		Value	Unit
V_{CCA}	Supply voltages referred to GND ⁽¹⁾	Device type 01 (see table 9 and SMD)	1.8 ⁽²⁾ to 3.6	V
V_{CCB}		Device type 02 (see table 9 and SMD)	1.4 ⁽³⁾ to 3.6	
V_I	Input voltage referred to GND		0 to 3.6	
V_O	Output voltage referred to GND		0 to V_{CC}	
T_{op}	Operating temperature		-55 to 125	°C
d_t/d_v	Input rise and fall time, $V_{CC} = 3$ V ⁽⁴⁾		0 to 10	ns/V

- V_{CCA} must be higher or equal to V_{CCB} . (V_{CCB} higher than V_{CCA} is forbidden).
- 1.8 V minimum operating is guaranteed with a functional test at $V_{CCA} = V_{CCB} = 1.8$ V, $V_{IL} = 0.35 \times V_{CCA}$ and $V_{IH} = 0.65 \times V_{CCA}$ applied on V_{inA} , V_{inB} , EN and DIR inputs
- 1.4 V minimum operating is guaranteed with a functional test at $V_{CCA} = V_{CCB} = 1.4$ V, $V_{IL} = 0.35 \times V_{CCA}$ and $V_{IH} = 0.65 \times V_{CCA}$ applied on V_{inA} , V_{inB} , EN and DIR inputs
- Derates system propagation delays by difference in rise time to switch point for t_r or $t_f > 1$ ns/V.

3 Electrical characteristics

In Table 5, $T_{op} = -55\text{ }^{\circ}\text{C}$ to $125\text{ }^{\circ}\text{C}$, unless otherwise specified. Each input/output, as applicable, is tested at the specified temperature, for the specified limits. Non-designated output terminals are high level logic, low level logic or open, except for all I_{CC} tests, where the output terminals are open. When performing these tests, the current meter must be placed in the circuit so that all current flows through the meter.

Table 5. Electrical characteristics

Symbol	Parameter	Test conditions		Type	V_{CCA} (V)	V_{CCB} (V)	Min.	Max.	Unit

1. C_{IN}, C_{OUT}, and C_{PD} are measured only for initial qualification and after process or design changes which may affect capacitance. C_{IN} and C_{OUT} are measured between the designated terminal and GND at a frequency of 1 MHz. This test may be performed at 10 MHz and guaranteed, if not tested, at 1 MHz. The DC bias for the pin under test (V_{BIAS}) = 2.5 V or 3.0 V. For C_{IN}, C_{OUT}, and C_{PD}, all applicable pins are tested on five devices with zero failures. Power dissipation capacitance (C_{PD}) determines both the power consumption (PD) and dynamic current consumption (IS), where: $PD = (C_{PD} + C_L) (V_{CC} \times V_{CC}) f + (I_{CC} \times V_{CC}) + (n \times d \times \Delta I_{CC} \times V_{CC})$, $IS = (C_{PD} + C_L) V_{CC} f + I_{CC} + n \times d \times \Delta I_{CC}$. For both P_D and I_S, n is the number of device inputs at TTL levels, d is the duty cycle of the input signal, f is the frequency of the input signal, and C_L is the external output load capacitance.

4 Radiations

Total dose:

The 54VCXH163245 is RHA QML-V, tested and characterized in full compliance with the MIL-STD-883 specification, in high-dose-rate only (full CMOS technology), between 50 and 300 rad/s.

All parameters provided in Table 5. Electrical characteristics apply to both pre- and post-irradiation, as follows:

All tests are performed in accordance with MIL-PRF-38535 and test method 1019 of MIL-STD-883 for total ionizing dose (TID).

The initial characterization is performed in qualification only on both biased and unbiased parts.

Each wafer lot is tested at high dose rate, in the worst bias case condition, based on the results obtained during the initial qualification.

Heavy-ions:

The behavior of the product when submitted to heavy ions is not tested on qualification lots only. Heavy-ion trials are not performed in production.

Table 6. Radiations

Type	Features	Value	Unit
TID ⁽¹⁾	High-dose rate (50 to 300 rad (Si) per sec.)	300	krad
SEL ⁽²⁾⁽³⁾	With a particle angle of 60 ° at 125 °C and a fluence of 1×10^7 ions/cm ²	110	MeV.cm ² /mg
	With a particle angle of 0 ° at 125 °C and a fluence of 1×10^7 ions/cm ²	55	
SET/SEU ⁽³⁾⁽⁴⁾	SEU immune up to: (V _{CC} = 1.4 V, 25 °C, and a fluence of 1×10^6 ions/cm ²)	18.5	

1. A total ionizing dose (TID) of 300 krad(Si) is equivalent to 3000 Gy(Si), (1 gray = 100 rad).
2. SEL: single event latch-up.
3. Fluence: number of ions on a specified area (cm²). 1×10^7 ions/cm² is equivalent to 10 Million ions per cm².
4. SET/SEU: single event transient / single event upset.

5 Test circuit

Figure 5. Test circuit

1. $C_L = 50 \text{ pF}$ or equivalent (includes jig and probe capacitance), $R_T = Z_{OUT}$ of pulse generator (typically 50Ω), $V_{REF} = 0.5 V_{DD}$. I_{SRC} is set to -1.0 mA and I_{SNK} is set to 1.0 mA for t_{PHL} and t_{PLH} measurements. Input signal from pulse generator: $V_I = 0.0 \text{ V}$ to V_{DD} ; $f = 10 \text{ MHz}$; $t_r = 1.0 \text{ V/ns} \pm 0.3 \text{ V/ns}$; $t_f = 1.0 \text{ V/ns} \pm 0.3 \text{ V/ns}$; t_r and t_f are measured from $0.1 V_{DD}$ to $0.9 V_{DD}$ and from $0.9 V_{DD}$ to $0.1 V_{DD}$ respectively.
2. When measuring t_{PLH} and t_{PHL} : $S1 = \text{open}$
3. When measuring t_{PLZ} and t_{PZL} : $S1 = 2V_{CC}$ for $V_{CC} = 1.8 \text{ V}$ and $V_{CC} = 2.3 \text{ V}$ to 2.7 V ; $S1 = 6.0 \text{ V}$ for $V_{CC} = 3.0 \text{ V}$ to 3.6 V .
4. When measuring t_{PHZ} and t_{PZH} : $S1 = \text{GND}$.
5. The t_{PZL} and t_{PZH} reference waveform is for the output under test with internal conditions set so that the output is low at V_{OL} except when disabled by the output enable control. The t_{PZL} and t_{PZH} reference waveform is for the output under test with internal conditions set so that the output is high at V_{OH} except when disabled by the output enable control.
6. $C_L = 30 \text{ pF}$ minimum or equivalent (includes test jig and probe capacitance)
7. $R_T = 50 \Omega$ or equivalent, $R_L = 500 \Omega$ or equivalent
8. Input signal from pulse generator: $V_{IN} = 0.0 \text{ V}$ to V_{IH} ; $PRR = 1 \text{ MHz}$; $Z_O = 50 \Omega$; $t_r = 2.0 \text{ ns}$; $t_f = 2.0 \text{ ns}$; t_r and t_f are measured from 10% of V_{IH} to 90% of V_{IH} and from 90% of V_{IH} to 10% of V_{IH} , respectively; duty cycle = 50% percent.
9. Timing parameters are tested at a minimum input frequency of 1 MHz

Table 7. Voltage points for measurements

Symbol	Parameter	V_{CC}	
		1.8 V and 2.3 V to 2.7 V	3 V to 3.6 V
V_{IH}	High-level input voltage	V_{CC}	2.7 V
V_M	Middle threshold voltage point	$V_{CC}/2$	1.5 V
V_X	Low threshold voltage point	$V_{OL} + 0.15 \text{ V}$	$V_{OL} + 0.3 \text{ V}$
V_Y	High threshold voltage point	$V_{OH} - 0.15 \text{ V}$	$V_{OH} - 0.3 \text{ V}$

6 Package information

To meet environmental requirements, ST offers these devices in different grades of **ECOPACK** packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions, and product status are available at: www.st.com. ECOPACK is an ST trademark.

6.1 Ceramic Flat-48 package information

Figure 9. Ceramic Flat-48 package outline

Table 8. Ceramic Flat-48 mechanical data

Ref.	Dimensions					
	mm			Inches		
	Min.	Typ.	Max.	Min.	Typ.	Max.
A	2.18	2.47	2.72	0.086	0.097	0.107
b	0.20	0.254	0.30	0.008	0.010	0.012
c	0.12	0.15	0.18	0.005	0.006	0.007

7 Ordering information

Table 9. Order code

Order code	SMD ⁽¹⁾	Device type	Qualification level	Package	Lead finish	Marking ⁽²⁾	Packing
RHFXH163245K1	-	As per device type 01	Engineering Model	Flat-48	Gold	RHFXH163245K1	Conductive strip pack
RHFXH163245K01V	5962F11207	01	QML-V Flight	Flat-48		5962F1120701VXC	
RHFXH163245K03V	5962F11207	01	QML-V Flight	Flat-48 with grounded-lid		5962F1120701VYC	
RHFXH163245K05V	5962F11207	02	QML-V Flight	Flat-48 with grounded-lid		5962F1120702VYC	
RHFXH163245K07V	5962F11207	02	QML-V Flight	Flat-48		5962F1120702VXC	

1. Standard micro circuit drawing.

2. Specific marking only. Complete marking includes the following:

- ST logo
- Date code (date the package was sealed) in YYWWA (year, week, and lot index of week)
- Country of origin (FR= France)

8 Other information

8.1 Date code

The date code (date the package was sealed) is structured as follows:

- Engineering model: 3yywwz
- Flight model: yywwz

Where:

yy = last two digits of the year, ww = week digits, z = lot index of the week

8.2 Product documentation

Each product shipment includes a set of associated documentation within the shipment box. This documentation depends on the quality level of the products, as detailed in the table below.

The certificate of conformance is provided on paper whatever the quality level. For QML parts, complete documentation, including the certificate of conformance, is provided on a CDROM.

Table 10. Product documentation

Quality level	Item
Engineering model	Certificate of conformance including: • Customer name • Customer purchase order number • ST sales order number and item • ST part number • Quantity delivered • Date code • Reference to ST datasheet • Reference to TN1181 on engineering models • ST Rennes assembly lot ID
	Certificate of Conformance including: • Customer name • Customer purchase order number • ST sales order number and item • ST part number • Quantity delivered • Date code • Serial numbers • Group C reference • Group D reference • Reference to applicable SMD • ST Rennes assembly lot ID
QML-V Flight	Quality control inspection (groups A, B, C, D, E)
	Screening electrical data in/out summary
	Precap report
	PIND (particle impact noise detection) test
	SEM (scanning electronic microscope) inspection report
	X-ray plates

Revision history

Table 11. Document revision history

Date	Revision	Changes
27-Jul-2016	1	Initial release
15-Sep-2016	2	Table 4: "Absolute maximum ratings": updated V_{IA} value and added G/DIR parameter. Table 5: "Operating conditions": updated V_I value
29-Sep-2016	3	Section 1.1: "Cold spare": updated text Section 1.2: "Power-up": updated footnotes of Figure 3: "Power-up"
30-Nov-2017	4	Updated Heavy ions value Table 7: "Radiations"
17-Sep-2018	5	Updated Figure 3. Power supply domain and Section 1.2 Power-up and operating, Section 1.3 Pin connections and description and Section 7 Ordering information. Minor text changes
13-Jul-2021	6	Updated Section Features and Section 1.2 Power-up and operating.
14-Sep-2021	7	Updated Section Description.
06-Mar-2024	8	Updated figure and features on the cover page. Updated Section 1.2: Power-up and operating, V_{CCA} , V_{CCB} value in Table 4 and Table 9. Order code. Added footnote in Table 4. Minor text changes.
28-Jul-2025	9	Updated title, features and description on the cover page. Updated parameter and values in Table 3, Table 4, Table 5. Updated Section 4: Radiations and Table 9.

Contents

1	Functional description	2
1.1	Cold spare	3
1.2	Power-up and operating	4
1.3	Pin connections and description	5
2	Absolute maximum ratings and operating conditions	6
3	Electrical characteristics	7
4	Radiations	11
5	Test circuit	12
6	Package information	14
6.1	Ceramic Flat-48 package information	14
7	Ordering information	15
8	Other information	16
8.1	Date code	16
8.2	Product documentation	16
	Revision history	17

IMPORTANT NOTICE – READ CAREFULLY

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice.

In the event of any conflict between the provisions of this document and the provisions of any contractual arrangement in force between the purchasers and ST, the provisions of such contractual arrangement shall prevail.

The purchasers should obtain the latest relevant information on ST products before placing orders. ST products are sold pursuant to ST's terms and conditions of sale in place at the time of order acknowledgment.

The purchasers are solely responsible for the choice, selection, and use of ST products and ST assumes no liability for application assistance or the design of the purchasers' products.

No license, express or implied, to any intellectual property right is granted by ST herein.

Resale of ST products with provisions different from the information set forth herein shall void any warranty granted by ST for such product.

If the purchasers identify an ST product that meets their functional and performance requirements but that is not designated for the purchasers' market segment, the purchasers shall contact ST for more information.

ST and the ST logo are trademarks of ST. For additional information about ST trademarks, refer to www.st.com/trademarks. All other product or service names are the property of their respective owners.

Information in this document supersedes and replaces information previously supplied in any prior versions of this document.
