

Broadband Darlington Amplifier DC-15 GHz

Rev. V1

Features

- Gain: 13.5 dB @ 6 GHz
- Output P1dB: 18 dBm @ 6 GHz
- Noise figure: 4.5 dB @ 6 GHz
- Single Bias Operation
- Adjustable Current
- Lead-Free 1.5 x 1.2 mm 6-lead TDFN Plastic Package
- Halogen-Free “Green” Mold Compound
- RoHS* Compliant

Description

The MAAM-011206 is a versatile, DC - 15 GHz, Darlington amplifier, with 13.5 dB typical gain and 18 dBm of output power. The input and output are fully matched to 50 Ω with typical return loss >10 dB. Third order linearity (OIP3) is typically 28 dBm and reverse isolation is >21 dB. Functional operation is achieved with a single bias voltage V_{DD} , from +3 V to +5 V.

An external resistor between V_{DD} and pin 6 enables single bias operation. No negative bias is necessary. See DC Bias Operation table for external resistor value selection.

The MAAM-011206 is housed in a leadless 1.5 x 1.2 mm plastic SMT package compatible with standard pick and place assembly equipment. It is fabricated using a GaAs process which features full passivation for increased performance and reliability.

The device is well suited to diverse applications such as LO drivers, gain blocks and RF driver stages.

Functional Schematic

Pin Configuration^{3,4}

Pin No.	Pin Name	Description
1	RF _{OUT} / V _{DD}	RF Output / Drain Bias
2	N/C	No Connection ³
3	RF _{IN}	RF Input
4	N/C	No Connection ³
5	N/C	No Connection ³
6	V _B	Bias Adjust

3. MACOM recommends connecting unused package pins to ground.

4. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

Ordering Information^{1,2}

Part Number	Package
MAAM-011206-TR1000	1000 Piece Reel
MAAM-011206-TR3000	3000 Piece Reel
MAAM-011206-SMB	Sample Board

1. Reference Application Note M513 for reel size information.

2. All sample boards include 3 loose parts.

DC Bias Operation

Bias Adjust Using V_B

Pin 6 can be connected to a separate voltage source to achieve the desired I_{DD} , not to exceed 120 mA. The amplifier will be powered down by applying a V_B of 0.2 V or less.

Single Bias Operation

Connecting V_{DD} to pin 6 with an external resistor R_B enables single bias operation of the amplifier; see page 4 application information. The value of external resistor R_B sets the desired current I_{DD} . The following table shows approximate performance at 6 GHz with different external resistor values.

V_{DD} (V)	R_B (Ω)	I_{DD} (mA)	Gain (dB)	P_{1dB} (dBm)	RL (I/O) (dB)
5	20000	26	11	—	13
5	11000	34	12	17	15
5	6800	47	13	17	17
5	4800	62	13	18	17
5	4000	72	13	19	18

The following table shows drain current (I_{DD}) versus external resistor (R_B) values for V_{DD} voltages of 5 V & 3.3 V:

$V_{DD} = 3.3 \text{ V}$		$V_{DD} = 5 \text{ V}$	
R_B (Ω)	I_{DD} (mA)	R_B (Ω)	I_{DD} (mA)
8000	14	30000	23
5000	17	20000	26
3200	24	11000	34
2500	32	8500	40
2200	37	6800	47
1900	45	5500	55
1600	55	4800	62
1500	59	4500	65
1400	64	4000	72
1300	70	—	—

Absolute Maximum Ratings^{6,7}

Parameter	Absolute Maximum
Input Power	15 dBm
Operating Voltage	7 V
Junction Temperature ^{8,9}	+150°C
Operating Temperature	-40°C to +85°C
Storage Temperature	-65°C to +150°C

6. Exceeding any one or combination of these limits may cause permanent damage to this device.
 7. MACOM does not recommend sustained operation near these survivability limits.
 8. Operating at nominal conditions with $T_J \leq +150^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^6$ hours.
 9. Junction Temperature (T_J) = $T_C + \Theta_{JC} * (V * I)$
 Typical thermal resistance (Θ_{JC}) = 90°C/W .
 a) For $T_C = +25^\circ\text{C}$,
 $T_J = 57^\circ\text{C}$ @ 5 V, 72 mA
 b) For $T_C = +85^\circ\text{C}$,
 $T_J = 121^\circ\text{C}$ @ 5 V, 80 mA

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Application Schematic

Grounding

It is recommended that the total ground (common mode) inductance not exceed 0.03 nH (30 pH). This is equivalent to placing at least four 8 mil (200 μm) diameter vias under the device, assuming an 8 mil (200 μm) thick RF layer to ground.
