

These new test clips provide the user with an easy means to connect instrumentation to the 132 pin fine pitch plastic PQFP chip leads.

- Connects to 132 pin high density JEDEC PQFP surface mounted chip leads.
- Two templates are included to identify pin numbering. Both pin 1 center and pin 1 top left are included. See page 2 for layout.
- PCB has ground plane which is connected to the four GND pins, (one at each corner).
- Gold plated contacts for the chip leads and the connector pins assure noise free connection.

Pomona's JEDEC test clips are perfect for system design, field service testing, failure analysis, and well suited for use with logic analyzers or oscilloscopes.

The patented locking mechanism holds the clip on the device by gripping the chip body at the end of each lead pattern. Each clip contact is individually cantilevered to assure positive contact. There are three other types of interfaces are available for JEDEC chips. See Pomona's full line catalog for complete details. Other clips are available in many sizes to fit the most popular chips now in use.
