- 1) Test Parameters: 100KHz, 1.0Vrms
- 2) I_{rms} Amperes for approximately ΔT of 40°C above 85°C ambient
- 3) Isat Amperes Peak for approximately 15% rolloff (@20°C)
- 4) Isat Amperes Peak for approximately 30% rolloff (@20°C)
- 5) Applied Volt-Time product (V- μS) across the inductor. This value represents the applied V- μS at operating frequency necessary to generate additional core loss which contributes to the 40°C temperature rise. De-rating of the I_{rms} is required to prevent excessive temperature rise. The 100% V-uS rating is equivalent to a ripple current I_{p-p} of 20% of Isat (30% rolloff option).

It is recommended that the temperature of the part not exceed 155°C under worst case operating conditions verified in the end application.
