

CJ1W-NC□81/□82

CSM_CJ1W-NC_81_E_4_1

Preeminent control performance and easy operation feature of EtherCAT improve the production efficiency.

The EtherCAT communications with 100Mbps baud rate enables fast and accurate position control.

A wide range of position control functions are available with this position control unit.

CJ1W-NC881

CJ1W-NC882

EtherCAT® is a registered trademark of Beckhoff Automation GmbH.

Features

- Fast positioning operation: taking from 0.15 to 0.4ms (min.) to start servo operation from PLC start command.
- Support for Servomotors with Absolute Encoders
- Monitor the Deviation between Axes during Linear Interpolation
- A Wide Range of Positioning Operations
- Comes with Memory Operation function.
- Common control interface with pulse-train type position control unit (CJ1W-NC□□4).
- Fast communication of EtherCAT (250μs min. communications cycle).
- In addition to servo control, inverters, vision sensors, and other I/O devices that support EtherCAT can be connected.
- Support for Servomotors Speed Control and Torque limit outputs.

System Configuration

Ordering Information

International Standards

- The standards are abbreviated as follows: U: UL, U1: UL(Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

Position Control Units with EtherCAT interface

Unit type	Product Name	Specifications		No. of unit numbers allocated	Current consumption (A)		Model	Standards
		Control output interface	No. of axes		5 V	24 V		
CJ1 CPU Bus Units	Position Control Units with EtherCAT interface	Control commands executed by EtherCAT communications. Positioning functions: Memory operation, Direct operation by ladder programming	2 axes	1	0.46	–	CJ1W-NC281	UC1, CE
			4 axes				CJ1W-NC481	
			8 axes				CJ1W-NC881	
			16 axes				CJ1W-NCF81	
		Control commands executed by EtherCAT communications. Positioning functions: Memory operation, Direct operation by ladder programming I/O communications: 64 nodes	4 axes	1	0.46	–	CJ1W-NC482	
			8 axes				CJ1W-NC882	
			16 axes				CJ1W-NCF82	

Note: 1. There is no accessory for the CJ-series Position Control Unit with EtherCAT interface.
2. This unit cannot be used, with the Machine Automation Controller NJ-series.

Recommended EtherCAT Communications Cables

Category 5 or higher (100BASE-TX) straight cable with double shielding (aluminum tape and braided shielding) is recommended.

Cabel with Connectors

Wire Gauge and Number of Pairs: AWG22, 2-pair Cable

Item	Appearance	Recommended manufacturer	Cable length(m)	Model
Cable with Connectors on Both Ends (RJ45/RJ45)		OMRON	0.3	XS5W-T421-AMD-K
			0.5	XS5W-T421-BMD-K
			1	XS5W-T421-CMD-K
Cable with Connectors on Both Ends (M12/RJ45)		OMRON	2	XS5W-T421-DMC-K
			5	XS5W-T421-GMC-K
			10	XS5W-T421-JMC-K

Note: The cable length 0.3, 0.5, 1, 2, 3, 5, 10 and 15m are available. For details, refer to Cat.No.G019.

Cables / Connectors

Wire Gauge and Number of Pairs: AWG24, 4-pair Cable

Item	Appearance	Recommended manufacturer	Model
Cables	–	Tonichi Kyosan Cable, Ltd.	NETSTAR-C5E SAB 0.5 × 4P
	–	Kuramo Electric Co.	KETH-SB
	–	SWCC Showa Cable Systems Co.	FAE-5004
RJ45 Connectors	–	Panduit Corporation	MPS588

Wire Gauge and Number of Pairs: AWG22, 2-pair Cable

Item	Appearance	Recommended manufacturer	Model
Cables	–	Kuramo Electric Co.	KETH-PSB-OMR *
RJ45 Assembly Connector		OMRON	XS6G-T421-1 *

* We recommend you to use above cable and connector together.

Support Software

Product name	Specifications			Model	Standards
		Number of licenses	Media		
FA Integrated Tool Package CX-One Ver. 4.□	The CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. OS: Windows XP (Service Pack 3 or higher), Vista or 7 Note: Except for Windows XP 64-bit version. CX-One Version 4.□ includes CX-Programmer Ver.9.□. For details, refer to the CX-One catalog (Cat. No. R134).	1 license *1	DVD *2	CXONE-AL01D-V4	–

*1. Multi licenses are available for the CX-One (3, 10, 30 or 50 licenses).

*2. The CX-One is also available on CD (CXONE-AL□□C-V4).

Interpreting Model Numbers

You can identify the number of axes and output pattern from the model number.

CJ1W-NC 2 8 1

(1) (2) (3) (4)

No	Item	Symbol	Specifications
(1)	CJ-series Position Control Unit		
(2)	Number of axes	2	2 axes
		4	4 axes
		8	8 axes
		F	16 axes
(3)	Output pattern	8	EtherCAT
(4)	Development number	1	Servo control only
		2	Servo control + I/O communications

Mountable Racks

Model	NJ system		CJ system (CJ1, CJ2)		CP1H system	NSJ system	
	CPU Rack	Expansion Rack	CPU Rack	Expansion Backplane	CP1H PLC	NSJ Controller	Expansion Backplane
CJ1W-NC281 CJ1W-NC481 CJ1W-NC881 CJ1W-NCF81 CJ1W-NC482 CJ1W-NC882 CJ1W-NCF82	Not Supported		16 Units max. (10 per Rack)		Not Supported	Not Supported	10 Units

General Specifications

Item	CJ1W-NC281/-NC481/-NC881/-NCF81/-NC482/-NC882/-NCF82
Dimensions	90 × 65 × 31 mm (H × D × W)
Weight	110 g max.
Internal current consumption	460 mA max. at 5 VDC
Ambient operating temperature	0 to 55°C
Applicable standards	Conforms to cULus and EC Directives.

Note: All other specifications conform to the general specifications of the CJ Series.

Characteristics

Item			Models						
			Servo control only				Servo control + I/O communications		
			CJ1W-NC281	CJ1W-NC481	CJ1W-NC881	CJ1W-NCF81	CJ1W-NC482	CJ1W-NC882	CJ1W-NCF82

Control method			Control commands using EtherCAT communication						
Number of controlled axes			2 axes	4 axes	8 axes	16 axes	4 axes	8 axes	16 axes
Maximum command output speed			104 Mpps *2						
Control units	Setting unit		Pulses, millimeters, inches, or degrees						
	Unit multiplier *3		×1, ×10, ×100, ×1,000, or ×10,000						
	Electronic gear ratio *3		Unit version 1.1 or earlier: 1/1 to 1,048,576/1,048,576 Unit version 1.3 or later: 1/1 to 4,294,967,295/4,294,967,295						
Positioning functions			Memory operation or direct operation						
	Single axis control	Position control	2 axes	4 axes	8 axes	16 axes	4 axes	8 axes	16 axes
		Speed control	2 axes	4 axes	8 axes	16 axes	4 axes	8 axes	16 axes
	Interpolated control	Linear interpolation	2 axes max.	4 axes max.	4 axes max.	4 axes max.	4 axes max.	4 axes max.	4 axes max.
		Circular interpolation	2 axes	2 axes	2 axes	2 axes	2 axes	2 axes	2 axes
	Memory operation	Maximum number of tasks	2	4	4 *4	4 *4	4	4 *4	4 *4
		Sequence functions	JUMP, FOR-NEXT (50 layers/task), PSET, and PRSET						
Dwell timers		500/task, 0 to 10.00 s (Set in increments of 0.01 s.)							
Position command values	Data	-2,147,483,648 to 2,147,483,647 command units *5							
	Number of position command values	500/task							
Speed command values	Data *6	Position control: 1 to 2,147,483,647 command units/s Speed control : -2,147,483,648 to 2,147,483,647 command units/s							
	Number of speed command values	500/task							
Acceleration times	Data	0 to 250,000 ms							
	Number of acceleration times	500/task							
Deceleration times	Data	0 to 250,000 ms							
	Number of deceleration times	500/task							
Auxiliary functions	Overrides		0.01% to 500.00% (Can be set for each axis.)						
	Software limits		-2,147,483,647 to 2,147,483,646 command units (Can be set for each axis.)						
	Backlash compensation		Backlash compensation is performed using the compensation function in the Servo Drive. The setting range depends on the specifications of the Servo Drive.						
	Torque Limits		Unit version 1.1 or earlier: Supports only the ability to enable or disable the torque limits by turning ON or OFF the command bits. Unit version 1.3 or later: Supports the ability to change the torque limit data via the Memory Area / Synchronous Data Link in addition to the ability to enable or disable the torque limits by turning ON or OFF the command bits.						
Synchronous Data Link function			None				Unit version 1.1 or earlier: None. Unit version 1.3 or later: Provides command support for velocity command data, torque command data, torque feedforward data, torque limit data, and velocity limitation value when used in conjunction with a CJ2H-CPU (unit version 1.4 or later).

	Starting time *7	Direct operation (high-speed PTP) *8	0.15 to 0.4 ms		0.15 to 0.4 ms when using 1 to 4 axes 0.15 to 0.8 ms when using 5 to 8 axes	0.15 to 0.4 ms when using 1 to 4 axes 0.15 to 0.8 ms when using 5 to 10 axes 0.15 to 1.2 ms when using 11 to 16 axes	0.15 to 0.4 ms	0.15 to 0.4 ms when using 1 to 4 axes 0.15 to 0.8 ms when using 5 to 8 axes	0.15 to 0.4 ms when using 1 to 4 axes 0.15 to 0.8 ms when using 5 to 10 axes 0.15 to 1.2 ms when using 11 to 16 axes
		Direct operation (bits) *9	0.75 to 1.25 ms	1.25 to 2.25 ms	2.5 to 4.5 ms	3.0 to 5.0 ms	1.25 to 2.25 ms	2.5 to 4.5 ms	3.0 to 5.0 ms
		Memory operation (linear interpolation) *9	1.75 to 2.25 ms	3.25 to 4.25 ms	6.5 to 8.5 ms	7.0 to 9.0 ms	3.25 to 4.25 ms	6.5 to 8.5 ms	7.0 to 9.0 ms
Control I/O	Servo Drive interface	Communications port	EtherCAT port × 1						
		Output signals	There are no external output signals for external outputs. The following command bits are provided for each axis for Servo Drive control: Deviation Counter Reset Bit, Alarm Reset Bit, Servo Lock Bit, Servo Unlock Bit, and Torque Limit Bits.						
		Input signals	There are no external input signals for external inputs. The following status flags are provided for each axis for Servo Drive control: Origin Input Flag, Servo Drive Alarm Input Flag, and Positioning Completed Input Flag.						
		External interface signals *10	6 signals (external origin signal, origin proximity signal, forward limit signal, reverse limit signal, emergency stop signal, and interrupt input signal) for each axis						

*1. A controllable Servo Drive is Servo Drive for which you can use the position control functions of the Position Control Unit.

*2. This is the maximum speed command when converted to pulses.

*3. Command units can be set for each axis according to the electronic gear ratio and unit multiplier.

*4. Up to four axes can be controlled by each task.

*5. Setting is possible between -2,147,483,648 and 2,147,483,647 pulses.

*6. The command can be set to up to 104,857,600 pps when converted to pulses.

*7. This is the time from executing a command at the PLC until the command is output on EtherCAT communications.

Execution for command bits is in the I/O refresh period.

The starting time depends on the control cycle, communications cycle, and operating conditions.

Refer to Position Control Units Operation Manual (Cat. No. W487) for details.

*8. The starting time applies when starting one axis with a special Position Control Unit instruction and a CJ2M or CJ2H CPU Unit with unit version 1.3 or later.

*9. These are the internal Position Control Unit processing times.

*10. Servo Drive inputs are used.

EtherCAT Communications Specifications

Item	Characteristics						
	Servo control only				Servo control + I/O communications		
	CJ1W-NC281	CJ1W-NC481	CJ1W-NC881	CJ1W-NCF81	CJ1W-NC482	CJ1W-NC882	CJ1W-NCF82
Communications standard	IEC 61158 Type12						
Physical layer	100Base-TX (IEEE802.3)						
Connector	RJ45 shielded connector × 1						
Communications media	Category 5 or higher (Recommended: cable with double, aluminum tape and braided shielding)						
Communications distance	100 m max. between nodes						
Topology	Daisy chain only *1						
EtherCAT Master Specifications	Class B (minimum master-CoE compatible (no information service for SDO))						
Maximum number of slaves *2	2	4	8	16	68	72	80
Node address setting range	1 to 2	1 to 4	1 to 8	1 to 16	1 to 4 and 17 to 80 *3	1 to 8 and 17 to 80 *3	1 to 16 and 17 to 80 *3
Communications cycle *4	250 μs, 500 μs, 1 ms, or 2 ms						
Process data	Fixed PDO mappings specified for the slaves are used (set using Support Software).						
Mail box (CoE)	Emergency messages, SDO requests, SDO responses, and SDO information (Used for Position Control Unit communications control and slave device parameter transfers.)						
LED indicators	ECAT RUN × 1 ECAT ERR × 1 L/A (Link/Activity) × 1						
CiA402 drive profile *5	• Cyclic synchronous position mode • Cyclic synchronous velocity mode • Cyclic synchronous torque mode • Touch probe function • Torque limit function						

*1. Ethernet hubs cannot be used.

*2. This is the number of slaves, including Servo Drives and remote I/O slaves. The number of slaves that can be connected is limited. Refer to *Number of Remote I/O Connections* for details.

*3. Node addresses 17 to 80 are reserved for remote I/O slaves.

*4. The setting range depends on the number of slaves that are connected and the slave specifications. Refer to Position Control Units Operation Manual (Cat. No. W487) for details.

*5. This drive profile is used when connected to an OMNUC G5-series Servo Drive.

Number of Remote I/O Connections

The Position Control Unit has the memory of up to 640 bytes for inputs and 640 bytes for outputs to be used for PDO communications. The number of slaves that can be connected to the CJ1W-NC482/NC882/NCF82 is determined by the maximum memory size for PDO communications. The memory of the PDO communication is shared with the Servo Drives; therefore, the number of I/O slaves that can be connected changes with the number of OMNUC G5 Series Servo Drive (number of use axes) that are connected to the Position Control Unit.

Number of Servo Drive axes	Size used by Servo Drive axes (bytes) *	Remaining PDO communications memory size (bytes)		Number of slaves that can be connected according to slave I/O size (guidelines)			
		IN	OUT	8 bytes of I/O (4 input and 4 output bytes)	16 bytes of I/O (8 input and 8 output bytes)	32 bytes of I/O (16 input and 16 output bytes)	64 bytes of I/O (32 input and 32 output bytes)
0 axis	0	640	640	64	64	40	20
1 axis	29	611	611	64	64	38	19
2 axes	58	582	582	64	64	36	18
4 axes	116	524	524	64	64	32	16
8 axes	232	408	408	64	51	25	12
16 axes	464	176	176	64	22	11	5

* The OMNUC G5-series Servo Drives also use IN and OUT bytes. The factory default of the PDO communications size is 29 bytes.

Functional Specifications

The following functions are supported when the Position Control Unit is connected to an EtherCAT-compatible OMNUC G5-series Servo Drive.

Function			Description
Control functions	Single axis control	Absolute movements	Positioning is performed by specifying the absolute or relative target position and target speed directly from the ladder program.
		Relative movements	
		Speed control	Feeding at a specified speed is performed by specifying the target speed directly from the ladder program. Speed control is implemented using speed feeding with position control.
		Interrupt feeding	Interrupt feeding can be used to move a specified amount when an interrupt input is received during an absolute movement, a relative movement, or speed control.
		Rotation axis control	Rotation axes that are suitable for feeder and index table control can be controlled. Forward and reverse positioning and shortest route operations are possible.
		Changing target positions and target speeds	The target position or target speed can be changed during an absolute movement, a relative movement, or speed control.
	Multi-axis control	Linear interpolation	The operation of more than one axis is started and stopped simultaneously to move in a straight line to the target position from the starting point of each axis. Linear interpolation is possible for up to four axes.
		Circular interpolation	The operation of any two axes is controlled to move in a circular arc. Any of three methods can be used to specify a circular arc: specifying the target position and center point, specifying the target position, radius, and direction and specifying the target position and passing point.
	Memory operation	Automatic continuous operation	The target positions, speeds, and operation patterns can be set in advance in the Position Control Unit to automatically perform a series of operations. Continuous positioning and speed changes are also possible.
		Sequence functions	Memory operation data provides sequence functions, including repetition of a given operation and starting/ stopping operation data by using external inputs. Therefore, the Position Control Unit can perform various operation sequences without affecting the ladder programming in the CPU Unit.
Manual operation	Origin searches		External sensors and other means are used to detect the mechanical origin of the system. You can select the origin search operation that is best for your system from 15 different origin search operation patterns.
	Origin returns		You can return to the point that was defined as the mechanical origin.
	Presetting the present position		The present position can be changed to a specified value to define the origin.
	Deceleration stops and emergency stops		An axis that is in operation can be decelerated to a stop or stopped immediately.
	Jogging		You can jog either forward or in reverse.
	Inching		You can inch either forward or in reverse.
Synchronous Data Link			The CJ1W-NC□82 (unit version 1.3 or later) can perform data exchange between the CPU and Position Control Unit at regular intervals when used in conjunction with a CJ2H CPU (unit version 1.4 or later). In addition, you can use this function to perform synchronous feeding position, synchronous feeding velocity, and synchronous feeding torque control. Also, optional commands are available for torque feedforward data, torque limit data, and velocity limitation value.
Auxiliary control functions	Command unit setting		You can set the unit of control for each axis according to the machine.
	Acceleration/ deceleration control	Automatic acceleration/ deceleration control	The acceleration/deceleration curve can be automatically created during operation. You can select either a trapezoidal curve or an S curve based on a tertiary function.
		Changing acceleration/ deceleration rates	You can change the rate of acceleration/deceleration during acceleration/deceleration.
		Switching acceleration/ deceleration points	You can select one of three methods to connect speeds between different operation patterns during continuous memory operation.
	Overrides		You can increase or decrease the operating speed of the system by a specified factor.
	Backlash compensation		You can compensate for mechanical play using a parameter.
	M codes		M codes can be output during memory operation to interlock with external devices.
	Zone settings		You can set zones and assess when the present position is in a zone. Up to three zones can be set for each axis.
	Support for absolute encoders		You can build an absolute positioning system by using a Servomotor with an Absolute Encoder. The Position Control Units can be used together with OMRON's OMNUC G5-series Servomotors with Absolute Encoders.
	Teaching		You can save the present position as position data for memory operation.You can use either the command present position or feedback present position.
	Torque limit outputs		The torque limit outputs can be used to switch the torque limits of the Servo Drive. They can be turned ON and OFF directly from a ladder program. Torque limits can be automatically switched by using holding for an origin search operation. In addition, you can change the torque limit data via the Synchronous Data Link by using the CJ1W-NC□82 (unit version 1.3 or later) in conjunction with a CJ2H-CPU (unit version 1.4 or later) and OMNUC G5-series Servo Drive (version 2.0 or later). Also, you can change the torque limit data via the Memory Area by using the CJ1W-NC□81/ -NC□82 (unit version 1.3 or later) in conjunction with an OMNUC G5-series Servo Drive (version 2.0 or later).
	Monitoring functions	Software limits	You can set forward and reverse software limits for axis operation. If the target position exceeds a software limit, it will be detected in the command value check that is performed at startup.
		Monitoring position/ speed deviations	The Position Control Unit monitors the position or speed deviation between the present command position and present feedback position. You can stop axis operation if the deviation is too large.
		Monitoring deviation between axes	The deviation between axes is also monitored during linear interpolation. You can stop axis operation if the deviation is too large.

External Interface

Part Names

Indicators

Indicator	Display color	Status	Description
RUN	Green	ON	Normal operation.
		OFF	The power supply is OFF, a hardware error has occurred, or the PLC has detected a Position Control Unit error.
ERC	Red	ON	An error has occurred.
		OFF	Other than the above
ERH	Red	ON	There is an error in the PLC.
		OFF	Other than the above
ECAT RUN	Green	OFF	Initialized state
		Blinking	Pre-Operational state
		Single flash	Safe-Operational state
		ON	Operational state
ECAT ERR	Red	OFF	No error
		Blinking	Communications setting error
		Single flash	Synchronization error or communications data error
		Double flash	Application WDT timeout
		Flickering	Boot error
ECAT L/A	Green	ON	PDI WDT timeout
		OFF	Link not established in physical layer.
		ON	Link established in physical layer.
		Flickering	In operation after establishing link.

EtherCAT Communications Connector

This connector is used to connect the EtherCAT twisted-pair cable.

Connector Specifications

Specification	Description
Electrical characteristics	Conforms to IEEE 802.3 standards.
Connector structure	RJ45 8-pin modular connector (Conforms to ISO 8877.)

Pin Assignments

	Pin No.	Signal name	Abbreviation	Signal direction
	1	Transmission data +	TD+	Output
	2	Transmission data -	TD-	Output
	3	Reception data +	RD+	Input
	4	Not used.	---	---
	5	Not used.	---	---
	6	Reception data -	RD-	Input
	7	Not used.	---	---
	8	Not used.	---	---
	Hood	Frame ground	FG	---

EtherCAT Communications Cables

Use a category 5 or higher cable with double, aluminum tape and braided shielding.

Note: The maximum distance between any two nodes is 100 m. Some cables, however, are not rated for 100 m. Generally speaking, the transmission performance of stranded wires is worse than that of solid wire. Cables with stranded wires generally are not rated for 100 m.

Connector (Modular Plug) Specifications

Use a category 5 or higher, shielded connector.

Note: When selecting a connector, make sure that it is suitable for the cable that you are using. The following items must be confirmed: conductor size, whether connector is solid or stranded wire, whether there are 2 wire pairs or 4, the outside diameter, etc.

Unit Versions and Programming

Origin Position Latch	---	---	○
Ad hoc change of torque limit data by use of Allocated Memory Areas *1	---	---	○
Ad hoc change of torque limit data / torque feedforward data by use of the Synchronous Data Link *1 *2	---	---	○
Synchronous Data Link function (Electric Shaft function) *1 *2	---	---	○
Synchronous Data Link function (synchronous feeding velocity function) *1 *2	---	---	○
Synchronous Data Link function (synchronous feeding torque function) *1 *2	---	---	○

*1. Whether or not this function is supported depends on the version of the OMNUC G5-series Servo Drive.

For more information, refer to Function Support According to OMNUC G5-series Servo Drive Versions.

*2. Whether or not this function is supported depends on the version of the OMNUC G5-series Servo Drive.

For more information, refer to Function Support According to CPU Unit Versions.

Function Support According to OMNUC G5-series Servo Drive Versions

As indicated in the table below, functions supported by CJ1W-NC□82 Position Control Units (unit version 1.3 or later) differ depending on the version of the G5 series servo drive used in conjunction with the Position Control Unit:

○: Supported, ---: Not supported

Function		Drive version	
		Ver. 1.□	Ver. 2.0 or later
Synchronous Data Link function (Synchronous feeding functions)	Synchronous Feeding Position (Electric Shaft) function	○	○
	Synchronous Feeding Velocity function	---	○
	Synchronous Feeding Torque function	---	○
Ad hoc change of torque limit data by use of Allocated Memory Areas		---	○
Ad hoc change of torque limit data / torque feedforward data by use of the Synchronous Data Link		---	○

Function Support According to CPU Unit Versions

As indicated in the table below, functions supported by CJ1W-NC□82 Position Control Units (unit version 1.3 or later) differ depending on the version of the CPU unit used in conjunction with the Position Control Unit:

○: Supported, ---: Not supported

Function		CJ2H		CJ1-H/CJ1/ CJ1M/CJ2M
		Ver. 1.3 or earlier	Ver. 1.4 or later	
Synchronous Data Link function (Synchronous feeding functions)	Synchronous Feeding Position (Electric Shaft) function	---	○	---
	Synchronous Feeding Velocity function	---	○	---
	Synchronous Torque Command function	---	○	---
Ad hoc change of torque limit data / torque feedforward data by use of the Synchronous Data Link		---	○	---

Terms and Conditions of Sale

1. **Offer; Acceptance.** These terms and conditions (these "Terms") are deemed part of all quotes, agreements, purchase orders, acknowledgments, price lists, catalogs, manuals, brochures and other documents, whether electronic or in writing, relating to the sale of products or services (collectively, the "Products") by Omron Electronics LLC and its subsidiary companies ("Omron"). Omron objects to any terms or conditions proposed in Buyer's purchase order or other documents which are inconsistent with, or in addition to, these Terms.
2. **Prices; Payment Terms.** All prices stated are current, subject to change without notice by Omron. Omron reserves the right to increase or decrease prices on any unshipped portions of outstanding orders. Payments for Products are due net 30 days unless otherwise stated in the invoice.
3. **Discounts.** Cash discounts, if any, will apply only on the net amount of invoices sent to Buyer after deducting transportation charges, taxes and duties, and will be allowed only if (i) the invoice is paid according to Omron's payment terms and (ii) Buyer has no past due amounts.
4. **Interest.** Omron, at its option, may charge Buyer 1-1/2% interest per month or the maximum legal rate, whichever is less, on any balance not paid within the stated terms.
5. **Orders.** Omron will accept no order less than \$200 net billing.
6. **Governmental Approvals.** Buyer shall be responsible for, and shall bear all costs involved in, obtaining any government approvals required for the importation or sale of the Products.
7. **Taxes.** All taxes, duties and other governmental charges (other than general real property and income taxes), including any interest or penalties thereon, imposed directly or indirectly on Omron or required to be collected directly or indirectly by Omron for the manufacture, production, sale, delivery, importation, consumption or use of the Products sold hereunder (including customs duties and sales, excise, use, turnover and license taxes) shall be charged to and remitted by Buyer to Omron.
8. **Financial.** If the financial position of Buyer at any time becomes unsatisfactory to Omron, Omron reserves the right to stop shipments or require satisfactory security or payment in advance. If Buyer fails to make payment or otherwise comply with these Terms or any related agreement, Omron may (without liability and in addition to other remedies) cancel any unshipped portion of Products sold hereunder and stop any Products in transit until Buyer pays all amounts, including amounts payable hereunder, whether or not then due, which are owing to it by Buyer. Buyer shall in any event remain liable for all unpaid accounts.
9. **Cancellation; Etc.** Orders are not subject to rescheduling or cancellation unless Buyer indemnifies Omron against all related costs or expenses.
10. **Force Majeure.** Omron shall not be liable for any delay or failure in delivery resulting from causes beyond its control, including earthquakes, fires, floods, strikes or other labor disputes, shortage of labor or materials, accidents to machinery, acts of sabotage, riots, delay in or lack of transportation or the requirements of any government authority.
11. **Shipping; Delivery.** Unless otherwise expressly agreed in writing by Omron:
 - a. Shipments shall be by a carrier selected by Omron; Omron will not drop ship except in "break down" situations.
 - b. Such carrier shall act as the agent of Buyer and delivery to such carrier shall constitute delivery to Buyer;
 - c. All sales and shipments of Products shall be FOB shipping point (unless otherwise stated in writing by Omron), at which point title and risk of loss shall pass from Omron to Buyer; provided that Omron shall retain a security interest in the Products until the full purchase price is paid;
 - d. Delivery and shipping dates are estimates only; and
 - e. Omron will package Products as it deems proper for protection against normal handling and extra charges apply to special conditions.
12. **Claims.** Any claim by Buyer against Omron for shortage or damage to the Products occurring before delivery to the carrier must be presented in writing to Omron within 30 days of receipt of shipment and include the original transportation bill signed by the carrier noting that the carrier received the Products from Omron in the condition claimed.
13. **Warranties.** (a) **Exclusive Warranty.** Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied. (b) **Limitations.** OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) **Buyer Remedy.** Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty. See <http://www.omron247.com> or contact your Omron representative for published information.
14. **Limitation on Liability; Etc.** OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY. Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.
15. **Indemnities.** Buyer shall indemnify and hold harmless Omron Companies and their employees from and against all liabilities, losses, claims, costs and expenses (including attorney's fees and expenses) related to any claim, investigation, litigation or proceeding (whether or not Omron is a party) which arises or is alleged to arise from Buyer's acts or omissions under these Terms or in any way with respect to the Products. Without limiting the foregoing, Buyer (at its own expense) shall indemnify and hold harmless Omron and defend or settle any action brought against such Companies to the extent based on a claim that any Product made to Buyer specifications infringed intellectual property rights of another party.
16. **Property; Confidentiality.** Any intellectual property in the Products is the exclusive property of Omron Companies and Buyer shall not attempt to duplicate it in any way without the written permission of Omron. Notwithstanding any charges to Buyer for engineering or tooling, all engineering and tooling shall remain the exclusive property of Omron. All information and materials supplied by Omron to Buyer relating to the Products are confidential and proprietary, and Buyer shall limit distribution thereof to its trusted employees and strictly prevent disclosure to any third party.
17. **Export Controls.** Buyer shall comply with all applicable laws, regulations and licenses regarding (i) export of products or information; (ii) sale of products to "forbidden" or other proscribed persons; and (iii) disclosure to non-citizens of regulated technology or information.
18. **Miscellaneous.** (a) **Waiver.** No failure or delay by Omron in exercising any right and no course of dealing between Buyer and Omron shall operate as a waiver of rights by Omron. (b) **Assignment.** Buyer may not assign its rights hereunder without Omron's written consent. (c) **Law.** These Terms are governed by the law of the jurisdiction of the home office of the Omron company from which Buyer is purchasing the Products (without regard to conflict of law principles). (d) **Amendment.** These Terms constitute the entire agreement between Buyer and Omron relating to the Products, and no provision may be changed or waived unless in writing signed by the parties. (e) **Severability.** If any provision hereof is rendered ineffective or invalid, such provision shall not invalidate any other provision. (f) **Setoff.** Buyer shall have no right to set off any amounts against the amount owing in respect of this invoice. (g) **Definitions.** As used herein, "including" means "including without limitation"; and "Omron Companies" (or similar words) mean Omron Corporation and any direct or indirect subsidiary or affiliate thereof.

Certain Precautions on Specifications and Use

1. **Suitability of Use.** Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases but the following is a non-exhaustive list of applications for which particular attention must be given:
 - (i) Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
 - (ii) Use in consumer products or any use in significant quantities.
 - (iii) Energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
 - (iv) Systems, machines and equipment that could present a risk to life or property. Please know and observe all prohibitions of use applicable to this Product.
 NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON'S PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.
2. **Programmable Products.** Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.
3. **Performance Data.** Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.
4. **Change in Specifications.** Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.
5. **Errors and Omissions.** Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
