## Fibox Enclosure Catalogue on CD -ROM

### What's new?

The new CD - ROM includes all the latest new product introductions (MNX, CAB etc.) The user interface has been improved and is now easier to use. Software enhancements have reduced response times for accessing the data base.

It is a real designer's tool for selecting the right enclosure.

### Features of the CD

Contains a full enclosure catalogue complete with all Fibox product families and accessories.

Selection of the ideal enclosure by searching your most critical parameter (material, NEMA rating, size, etc.)

Contains scaleable drawings, presented in either metric or inch dimensions. (Inch sizes are for reference only.)

Computer aided design drawings, usable by the engineer's own CAD system. (Available formats: DRW, IGS, and DXF.)

Presentation of services available for modification and customisation by the factory.

Includes eleven languages: American, German, Danish, English, French, Italian, Dutch, Estonian, Polish, Finnish and Swedish.

### General information.

The Fibox Enclosure Catalogue is available in a CD-ROM version. To use our latest CD-ROM, the following minimum system configuration is required: IBM compatible PC with 386 processor, 4 MB RAM, 15 MB free hard drive disk space and Windows 3.1 or newer operating system.

## FIBOX is on the WEB for YOU

Find Fibox support services on the world wide web.

Visit our multi-language WEB site. As a global, multinational company, our home page is available in English, French, German, Swedish, Korean and Finnish.

### No time for drawing enclosures?

At <http://www.fibox.com>, Fibox lends a helping hand to designers with CAD format drawings which can be easily downloaded. Select only the drawings you need for your selected enclosure and complete your design quickly. Save time with drawings available in both inches and millimetres.

### Need technical specifications, accessories or agency approvals?

At <http://www.fibox.com>, you can obtain the technical information you need to complete your design. Select your enclosure, and print a PDF file with a photo, dimensional drawing (in metric and inches ), part numbers, ordering codes, technical data and regulatory agency approvals. There is even a list of correct accessories, ready for you to print. Select only the information you want and need!

### The world changes and so do we.

At <http://www.fibox.com>, you can see the latest Fibox products and services. As a leader in injection moulding for the electrical and electronics industries, there is always something new at Fibox. Visit our WEB site to keep abreast of new products and services, the latest in customising options, or our growing list of accessories. Our electronic newsletter will introduce you to new products, new applications and new services, plus add a personal touch as you get to know Fibox around the world.

### Need technical or promotional material?

At <http://www.fibox.com>, you can request our catalogue, full colour data sheets, press releases, manufacturers declarations, CD-ROM and much more. Just click the envelope and specify what you need.

Your thoughts, please!

Give us feedback. Tell us what you like and what you don't like! Write to us from <http://www.fibox.com>, or E-mail us at [info@fibox.fi](mailto:info@fibox.fi). We are committed to continually improving our service to you. Please help us by sharing your opinions with us.

## FIBOX QUALITY CREATES CUSTOMER ADVANTAGE

Fibox has developed a sophisticated quality system to assure our customers of the reliability and consistency of our products and our service. All aspects of our operations, from design and development through to production and product delivery, are documented to ensure superior performance. Performance you can rely on.

Fibox is an ISO 9001 certified manufacturer and was awarded its certificate by Bureau Veritas Quality International in 1992. This approval covers specifications defined by ISO 9001:1994.

## THE FIBOX QUALITY POLICY

The Fibox approach to quality is documented in the Fibox Quality Policy manual.

## THE FIBOX QUALITY SYSTEM

The Fibox quality system applies not only to product quality and safety, but availability of product, accuracy of shipments, technical support and customer service. The continued success of this program is assured by regular internal and independent external audits.

## NEMA/UL CLASSIFICATIONS OF PROTECTION

The National Electrical Manufacturers Association (NEMA) is a US Manufacturers Organisation which actively promotes standardised product specifications for electrical apparatus.

NEMA performance criteria and test methods are used by Underwriters' Laboratories as guidelines for investigation and listing of electrical enclosures.

Approximate IP equivalents in parentheses

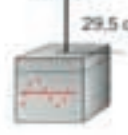

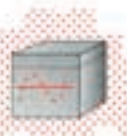

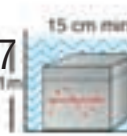

NEMA 1:	Indoor use primarily to provide a degree of protection against contact with the enclosed equipment and against a limited amount of falling dirt. (IP30)
2:	Indoor use to provide a degree of protection against limited amounts of falling water and dirt. (IP31)
3:	Outdoor use to provide a degree of protection against windblown dust, rain, and sleet; undamaged by the formation of ice on the enclosure. (IP64)
3R:	Outdoor use to provide a degree of protection against falling rain and sleet; undamaged by the formation of ice on the enclosure. (IP32)
3S:	Outdoor use to provide a degree of protection against windblown dust, rain and sleet; external mechanisms remain operable while ice laden.
4:	Indoor or outdoor use to provide a degree of protection against splashing water, windblown dust and rain, hose directed water; undamaged by the formation of ice on the enclosure. (IP66)
4X:	Indoor or outdoor use to provide a degree of protection against splashing water, windblown dust and rain, hose directed water; undamaged by the formation of ice on the enclosure, resists corrosion. (IP66)
6:	Indoor or outdoor use to provide a degree of protection against the entry of water during temporary submersion at a limited depth; undamaged by the formation of ice on the enclosure.
6P:	Indoor and outdoor use to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.
11:	Indoor use to provide by oil immersion a degree of protection of the enclosed equipment against the corrosive effects of corrosive liquids and gases.
12,12K:	Indoor use to provide a degree of protection against dust, falling dirt and dripping noncorrosive liquids. (IP65)
13:	Indoor use to provide a degree of protection against dust and spraying of water, oil and noncorrosive coolants. (IP65)

## THE IP AND IK CLASSIFICATIONS

Ingress protection class of enclosures is given in the form of IP classification, a two digit coding which is shown below. Fibox has tested the enclosures according to IEC 529 or the newer EN 60529 4:1992. The latter requires the second digit to be tested from class 6 upwards separately to each level of class, thus the double marking IP 66 / IP 67 indicates that the actual tests have been made for both levels.

The new European standard for empty enclosures, EN 50298:98 includes the new IK impact test, too. This test is described in EN 50102, and as Fibox enclosures are being tested to EN 50298:98, the data for impact resistance will be available as well.

FIRST NUMBER Protection against solid objects		SECOND NUMBER Protection against liquids		IK CODE Protection against mechanical impacts <b>NEW</b>	
IP	TEST	IP	TEST	IK	TEST
0	 no protection	0	 no protection	00	 no protection
1	 protected against solid objects up to 50 mm e.g. accidental touch by hands.	1	 protected against vertically falling drops of water.	01-05	 impact < 1 joule
2	 protected against solid objects up to 12 mm e.g. fingers.	2	 protected against direct sprays of water up to 15° from the vertical.	06	 impact 1 joule
3	 protected against solid objects over 2.5 mm (tools+ small wires).	3	 protected against sprays to 60° from the vertical.	07	 impact 2 joule
4	 protected against solid objects over 1 mm (tools+ small wires).	4	 protected against water sprayed from all directions - limited ingress permitted.	08	 impact 5 joule
5	 protected against dust - limited ingress permitted (no harmful deposit).	5	 protected against low pressure jets of water from all directions - limited ingress permitted.	09	 impact 10 joule
6	 totally protected against dust.	6	 protected against strong jets of water e.g. for use on shipdecks - limited ingress permitted.	10	 impact 20 joule
		7	 protected against the effects of immersion between 15 cm and 1 m.		
		8	 protected against long periods of immersion under pressure.		

## CUSTOMISATION SERVICES

Fibox is a leading innovator, designer and manufacturer of enclosures. Our products are marketed in over 40 countries world wide. We provide superior, cost effective solutions for protecting electrical and electronic equipment operating in hostile environments.

To increase the range and flexibility of our package solutions, Fibox has developed a comprehensive range of services, permitting cost effective customisation for specific applications.

The two most important of these are machining services and customised tooling.

Our sophisticated CNC machinery can supply enclosures with holes, cutouts and openings to your specification. This solution is best suited for small to medium volumes of enclosures.

For large OEM volumes, our sophisticated, multiple slide tooling permits cost effective modification of any side of the enclosure. In this way, the OEM can have his custom product based upon a standard Fibox enclosure. The OEM will save both money and development time, enabling him to concentrate on product sales.

The Fibox Enclosure Catalogue on CD-ROM (PC) provides you the fastest route for choosing Fibox enclosures and accessories. Our interactive program guides you to the correct enclosure and accessories for your application. Technical data and drawing files (DWG, IGS, and DXF) allow the engineer to design and customise quickly.

*See also page 14.*

Fibox can customise your enclosures making them completely ready for your application.

Machining services

Customised tooling

Coloured enclosures

Painted enclosures

EMC shielding

Printed enclosures

The Fibox Enclosure Catalogue on CD-ROM (PC) gives you the fastest route for choosing products with appropriate accessories and making your own products. With the help of enclosure drawings (DWG-, IGES, DXF formats) on the CD-ROM, it is easy to customise standard enclosures for your own application.

# FIBOX MNX

FIBOX MNX

The FIBOX MNX range of enclosures represents the culmination of 30 years experience in enclosure design and manufacture. Unique tooling defines a new "State of the Art" for injection moulding. The FIBOX MNX polycarbonate and ABS range has been designed to house and protect electrical and electronic components in hostile environments. Three body depths, and up to 4 cover choices per body size, create over 170 variations.

Covers are available opaque or transparent "smoked grey". A wide selection of accessories is available including a hinged "Swing Out" inner panel, the "Swing Panel".

## POLYCARBONATE AND ABS ENCLOSURE

### MULTI PURPOSE MOUNTING PODS

The 50 mm (H) base features 3 levels for component mounting. The highest level provides component clearance under the Printed Circuit Board. The middle level is ideal for DIN rail mounting. The lowest level permits snap-in mounting of PCB's.

### VERSATILE COVERS

Grey opaque or smoked transparent polycarbonate covers provide a stylish finish to any installed equipment. Tooling may be cost effectively changed to customise covers for volume OEM applications.

### FIBOX MNX PCM

Enclosure features metric knock-outs moulded in place for easy wiring.

Please ask for Fibox mounting and machining service of terminal blocks and cable glands.

**SWING  
PANEL**

### FUNCTIONAL COVER SCREWS

The enclosure is supplied with corrosion free plastic cover screws. A wing head screw can be snapped in place for opening without tools. Grey covers are supplied with grey screws. Smoked transparent covers are supplied with black screws.

### HINGED INNER PANEL

For instrumentation mounting, aluminum inner panels can be hinged right or left. Unique brackets allow mounting in either base or cover. The brackets permit mounting at variable depths.

### RUGGED HINGE

An optional corrosion free hinge is available. Mounted on the outside, attaching hardware is hidden by decorative covers.

### MEMBRANE KEY-BOARD RECESS

The cover features a slightly recessed area ideal for overlays and membrane key pads. Special cover available for size 175/60, see page 9.

## FIBOX CUSTOMIZING SERVICES

### FIBOX MACHINING SERVICES

To increase the range and flexibility of our enclosure solutions, Fibox has developed a comprehensive range of services, permitting cost effective customisation for specific applications. The two most important of these are machining services and customised tooling.

Our sophisticated CNC machinery can supply enclosures with holes, cutouts and openings to your specification. This solution is best suited for small to medium volumes of enclosures. Fibox knowledge of enclosure materials ensures that the machining method is compatible with the chosen enclosure material.

Prior to machining a production run, Fibox requires customer approved drawings. Either the customer or Fibox can create these drawings. Enclosure specifications and technical data are available on our latest CD-ROM or on the WEB [WWW.FIBOX.COM](http://WWW.FIBOX.COM). CAD support drawings are available in IGES, DWG and DXF formats adaptable to your design system requirements.

### CUSTOMISED TOOLING

For large volume OEM requirements, it is often possible to customise the moulding of a standard product to meet the OEM's specific needs. Provided the mould is a sophisticated multiple slide mould, any enclosure side may be customised without requiring an entirely new mould. It is important that the OEM consult with Fibox early in his design process to determine what, if any, mould change restrictions exist.

Altering an existing Fibox mould can be a very cost effective alternative to creating a custom mould. In essence, you lease a high volume, standard product mould with minimal initial tooling cost. This can shorten product development times and permit customising even those products with projected short life cycles. Your new product reaches the market sooner.

### COLOURED PLASTIC ENCLOSURES

Fibox offers custom moulding of standard enclosures in customer specified colours. Standard colour specifications are based upon the RAL system, however custom colour matching is possible. The type of plastic has significant impact on colour match, colour consistency and cost. Please consult the factory for guidance.

Custom colour molding becomes economical in volumes over 1000 pieces, but lower volumes are possible. Cost adders are based upon increased raw material costs, plus the cost to prepare moulds prior to production and then clean the moulds after production. These mould preparation costs are highly volume dependent.

### PAINTED ENCLOSURES

Painting enclosures is recommended for plastic enclosures when volumes do not justify custom moulding. Critical colour matching, if required, is also easier to accomplish with paint. Paint type is dependent upon the choice of enclosure material. Please consult the factory for guidance.

### EMC - PLASTIC ENCLOSURES

Plastic enclosures can be prepared to provide EMC shielding. Various methods are available, but painting the internal surface with Ni conductive paint is the preferred method. This coating, combined with a conductive gasket material such as CHO-SEAL 1350, can provide significant shielding levels. Proper selection of materials is very application specific. Please consult the factory for guidance.

### PRINTED ENCLOSURES

Silk screen printing is recommended for enclosure batches of less than 1000 pieces. This method is mainly suitable for flat surfaces, and can be used for large areas.

Tampo printing is the best solution for volumes greater than 1000 pieces. It is suitable for printing on both flat and curved surfaces of limited size. Tampo printing is also ideal for tight spots like the inside surface of the enclosure.
