*1 : T_c measured point is just under the chips.

If you use this value, R_{th(j-a)} should be measured just under the chips.

*2 : Typical value is measured by using Shin-etsu Silicone "G-746".

Note 1. I_E, V_{EC}, t_{rr} & Q_{rr} represent characteristics of the anti-parallel, emitter to collector free-wheel diode (FWDi).

2. Pulse width and repetition rate should be such that the device junction temp. (T_j) does not exceed T_{jmax} rating.

3. Junction temperature (T_j) should not increase beyond 150°C.

4. Pulse width and repetition rate should be such as to cause negligible temperature rise.
