

LUXEON UV

Superior Flux Density, Efficiency and Design Freedom
– in the Industry's Only Micro-Package UV LED

Introduction

At 1/5 the size of other ultraviolet and violet LEDs, LUXEON® UV is the industry's smallest footprint high-power emitter. LUXEON UV LEDs can be assembled in tight arrays with spacing of only 200 microns, which enables highest power density (W/cm^2) systems. The product delivers superior efficiency, undomed for precise optical control, and a portfolio covering ultraviolet (380-400nm) and violet (400-430nm) light.

Features

- 2.2mm^2 micro footprint
- 1 A max drive current
- AlN substrate
- Up to 45+% wall plug efficiency
- Undomed

Benefits

- Industry's highest array W/cm^2
- More flux per LED
- R_{th} as low as 3.5 K/W
- Less heat to manage
- Precise optical control

Key Applications

- Curing
- Medical
- Scientific
- Security/Forensic
- Specialty Lighting

General Information

Test Conditions

LUXEON UV emitters are specified and binned at 500 mA, 20ms monopulse, and junction temperature of 25°C.

Product Nomenclature

The part number designation for LUXEON UV is as follows:

L H UV – a B B B – c D D D

Where:

a — open slot to accommodate additional requirements per product and part number. a is 0 by default

BBB — designates beginning of 5nm wavelength bin (for example, 395 for 395-400nm)

c — open slot to accommodate additional requirements per product and part number. c is 0 by default

DDD — designates minimum radiometric power in mW (for example, 500 for 500mW)

Safety

WARNING: LUXEON UV products emit ultraviolet light. Do not look at operating LEDs. Eye injury may result. Use necessary skin and eye protection. Assume IEC62471 Risk Group 3.

Notes for Table 2:

1. Philips Lumileds maintains a tolerance of $\pm 2\text{nm}$ for peak wavelength measurements.
2. Spectral width at $1/2$ of the peak intensity.
3. Viewing angle is the off axis angle from lamp centerline where the radiometric power intensity is $1/2$ of the peak value.
4. R_{th} between junction and electrode pads.

Absolute Maximum Ratings

Table 3.

Condition	Absolute Maximum Rating
Forward Current (mA)	1000 mA
Junction Temperature ^[1]	135 $^{\circ}\text{C}$
ESD Sensitivity	Class 3B 8kV HBM JEDEC JS-001-2012

Storage Temperature	-40 $^{\circ}\text{C}$ – 135 $^{\circ}\text{C}$
Reverse Voltage	LUXEON UV LEDs are not designed to be driven in reverse bias.

Notes for Table 3:

1. Proper current derating must be observed to maintain junction temperature below the maximum. Maximum junction temperature dependant on wavelegnth bin and drive current. See ABI 14 for derating curve.

Mechanical Dimensions

Who We Are

Philips Lumileds focuses on one goal: Creating the world's highest performing LEDs. The company pioneered the use of solid-state lighting in breakthrough products such as the first LED backlit TV, the first LED flash in camera phones, and the first LED daytime running lights for cars. Today we offer the most comprehensive portfolio of high quality LEDs and uncompromising service.

Philips Lumileds brings LED's qualities of energy efficiency, digital control and long life to spotlights, downlights, high bay and low bay lighting, indoor area lighting, architectural and specialty lighting as well as retrofit lamps. Our products are engineered for optimal light quality and unprecedented efficacy at the lowest overall cost. By offering LEDs in chip, packaged and module form, we deliver supply chain flexibility to the inventors of next generation illumination.

Philips Lumileds understands that solid state lighting is not just about energy efficiency. It is about elegant design. Reinventing form. Engineering new materials. Pioneering markets and simplifying the supply chain. It's about a shared vision. Learn more about our comprehensive portfolio of LEDs at www.philipslumileds.com.
