

TLV1117

ADJUSTABLE AND FIXED LOW-DROPOUT VOLTAGE REGULATORS

SLVS561A – DECEMBER 2004 – REVISED MARCH 2005

- 1.5 V, 1.8 V, 2.5 V, 3.3 V, 5 V, and Adjustable Output Voltage Options
- Output Current of 800 mA
- Operates Down to 1.1-V Dropout
- Specified Dropout Voltage at Multiple Current Levels
- 0.2% Line Regulation Maximum
- 0.4% Load Regulation Maximum

description/ordering information

The TLV1117 is a positive low-dropout voltage regulator, designed to provide up to 800 mA of output current. The device is available in 1.5 V, 1.8 V, 2.5 V, 3.3 V, 5 V, and adjustable output voltage options. All internal circuitry is designed to operate down to 1-V input-to-output differential. Dropout voltage is specified at a maximum of 1.3 V at 800 mA, decreasing at lower load currents.

The low-profile surface-mount KTP package allows the device to be used in applications where space is limited. The TLV1117 requires a minimum of 10 μ F of output capacitance for stability. Output capacitors of this size or larger normally are included in most regulator designs.

Unlike pnp-type regulators, where up to 10% of the output current is wasted as quiescent current, the quiescent current of the TLV1117 flows into the load, increasing efficiency.

The TLV1117C device is characterized for operation over the virtual junction temperature range of 0°C to 125°C, and the TLV1117I device is characterized for operation over the virtual junction temperature range of –40°C to 125°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PowerFLEX is a trademark of Texas Instruments.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

TLV1117

ADJUSTABLE AND FIXED LOW-DROPOUT VOLTAGE REGULATORS

SLVS561A – DECEMBER 2004 – REVISED MARCH 2005

functional block diagram

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Continuous input voltage	20 V
Operating virtual junction temperature	150°C
Storage temperature range, T_{stg}	-65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

TLV1117

ADJUSTABLE AND FIXED LOW-DROPOUT VOLTAGE REGULATORS

SLVS561A – DECEMBER 2004 – REVISED MARCH 2005

package thermal data (see Note 1)

PACKAGE	BOARD	$\theta_{JP}^{\dagger}$	θ_{JC}	θ_{JA}
PowerFLEX (KTE)	High K, JESD 51-5	2.7°C/W		23°C/W
PowerFLEX/TO-252 (KTP)	High K, JESD 51-5	3°C/W		28°C/W
QFN (DRJ)	High K, JESD 51-5	TBD		TBD
SOT (DCY)	High K, JESD 51-7		4°C/W	53°C/W
TO-263 (KTT)	High K, JESD 51-5	TBD		TBD
TO-220 (KCS)	High K, JESD 51-5	3°C/W		19°C/W

[†] For packages with exposed thermal pads, such as QFN, PowerPAD, and PowerFLEX, θ_{JP} is defined as the thermal resistance between the die junction and the bottom of the exposed pad.

NOTE 1: Maximum power dissipation is a function of $T_J(\text{max})$, θ_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\text{max}) - T_A)/\theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.

recommended operating conditions

		MIN [†]	MAX	UNIT
V_{IN} Input voltage	TLV1117	2.7	15	V
	TLV1117-15	2.9	15	
	TLV1117-18	3.2	15	
	TLV1117-25	3.9	15	
	TLV1117-33	4.7	15	
	TLV1117-50	6.4	15	
I_{OUT} Output current			0.8	A
T_J Operating virtual junction temperature range	TLV1117C	0	125	°C
	TLV1117I	-40	125	

[†] The input-to-output differential across the regulator should provide for some margin against regulator operation at the maximum dropout (for a particular current value). This margin is needed to account for tolerances in both the input voltage (lower limit) and the output voltage (upper limit). The absolute minimum V_{IN} for a desired maximum output current can be calculated by the following:

$$V_{IN(\text{min})} = V_{OUT(\text{max})} + V_{DO(\text{max @ rated current})}$$

[†] All characteristics are measured with a 10- μF capacitor across the input and a 10- μF capacitor across the output. Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible.

TLV1117

ADJUSTABLE AND FIXED LOW-DROPOUT VOLTAGE REGULATORS

SLVS561A – DECEMBER 2004 – REVISED MARCH 2005

APPLICATION INFORMATION

V_{OUT} is calculated as:

$$V_{OUT} = V_{REF} \left(1 + \frac{R2}{R1} \right) + (I_{ADJ} \times R2)$$

Because I_{ADJ} typically is 55 µA, it is negligible in most applications.

- NOTES:
- A. Output capacitor selection is critical for regulator stability. The recommended minimum is 10-µF tantalum or 50-µF aluminum electrolytic, with either one having an ESR between 0.3 Ω and 22 Ω. Larger C_{OUT} values benefit the regulator by improving transient response and loop stability.
 - B. C_{ADJ} can be used to improve ripple rejection. Ensure that the impedance of C_{ADJ} $\left(X_{CADJ} = \frac{1}{2\pi f_{ripple} C_{ADJ}} \right)$ is $< R1$ to prevent the ripple from being amplified. If C_{ADJ} is used, then a larger C_{OUT} is required (22-µF tantalum or 150-µF aluminum electrolytic).
 - C. C_{IN} is recommended if TLV1117 is not located near the power-supply filter.
 - D. An external diode is recommended to protect the regulator if the input instantaneously is shorted to GND.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

PLASTIC SMALL-OUTLINE

KTE (R-PSFM-G3)

PowerFLEX™ PLASTIC FLANGE-MOUNT

- NOTES:
- All linear dimensions are in inches (millimeters).
 - This drawing is subject to change without notice.
 - The center lead is in electrical contact with the thermal tab.
 - Dimensions do not include mold protrusions, not to exceed 0.006 (0,15).
 - Falls within JEDEC MO-169

PowerFLEX is a trademark of Texas Instruments.

PowerFLEX™ PLASTIC FLANGE-MOUNT PACKAGE

- NOTES:
- All linear dimensions are in inches (millimeters).
 - This drawing is subject to change without notice.
 - The center lead is in electrical contact with the thermal tab.
 - Dimensions do not include mold protrusions, not to exceed 0.006 (0,15).
 - Falls within JEDEC TO-252 variation AC.

PowerFLEX is a trademark of Texas Instruments.

KTT (R-PSFM-G3)

PLASTIC FLANGE-MOUNT PACKAGE

4200577-2/E 03/2005

NOTES: A. All linear dimensions are in inches (millimeters).
 B. This drawing is subject to change without notice.
 C. Body dimensions do not include mold flash or protrusion. Mold flash or protrusion not to exceed 0.005 (0,13) per side.
 Falls within JEDEC TO-263 variation AA, except minimum lead thickness and minimum exposed pad length.

KCS (R-PSFM-T3)

PLASTIC FLANGE-MOUNT PACKAGE

4204749/D 11/2004

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Lead dimensions are not controlled within this area.
 - D. All lead dimensions apply before solder dip.
 - E. The center lead is in electrical contact with the mounting tab.
 - F. The chamfer is optional.
 - G. Thermal pad contour optional within these dimensions.
 - H. Falls within JEDEC TO-220 variation AB, except minimum lead thickness and minimum exposed pad length.

- D. All lead dimensions apply before solder dip.
- E. The center lead is in electrical contact with the mounting tab.
- F. The chamfer is optional.
- G. Thermal pad contour optional within these dimensions.
- H. Falls within JEDEC TO-220 variation AB, except minimum lead thickness.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
