

## **CNB1 Ni-MH pack (Nickel metal Hydride)**

For the occasional users of *EURO-WAVE* the cheapest solution is to use good quality alkaline battery cells such as Duracell.

For regular users or indeed business users we strongly suggest the option of the CNB1 battery pack. Using Ni-MH cells this battery pack from one charge will give you an average duty cycle of 9 hours based on 5% transmit time, 5% receive time and 90% standby. (Known as 5/5/90 duty cycle)

Unlike Ni-Cad's, Ni-MH cells are not so prone to the dreaded memory effect.
