PRODUCT DESCRIPTION

The AWB7228 is a fully matched, Multi-Chip-Module (MCM) designed for picocell, femtocell, and customer premises equipment (CPE) applications. Its high linearity and efficiency meet the extremely demanding needs of small cell infrastructure architectures. Designed for LTE, WCDMA and HSDPA air interfaces operating in the 2.496 GHz to 2.690 GHz band, the AWB7228 delivers up to +27 dBm of LTE (E-TM1.1) power with an ACPR of -47 dBc. It operates from

a convenient +4.5 V supply and provides 27 dB of gain. The device is manufactured using an advanced InGaP HBT MMIC technology offering state-of-the-art reliability, temperature stability, and ruggedness. The self-contained 7 mm x 7 mm x 1.3 mm surface mount package incorporates RF matching networks optimized for output power, efficiency, and linearity in a $50\ \Omega$ system.

APPLICATION INFORMATION

To ensure proper performance, refer to all related Application Notes.

Shutdown Mode

The power amplifier may be placed in a shutdown mode by applying logic low levels (see Operating Ranges table) to the V_{REF} voltage.

- Notes:
- 1. 10uF and 100uF capacitors are optional.
 - 2. Applications that have large supply voltage transients may benefit from the use of TVS diodes. For such applications, recommended TVS diodes are SM05T1G or SMJ5.0A.
 - 3. To achieve the RF Switching Time specifications listed in Table 4, the maximum recommended capacitance on the V_{REF} line is 0.01 μ F. The noise on the V_{REF} line should be kept as low as possible to minimize required capacitance.
